# AMAZING

## Ten Good Reasons to Buy an Amazing Things™ Model "A" Series™ Modem

**1. Amazing Things Modems Provide Access to a Wealth of Information through Databases.**

You can access over 2,500 informational databases with an Amazing Things Modem. Research topics from astrology to zoology, stock quotes, news, weather, sports, legal references, medical information and more.

**2. Amazing Things Modems Network.**

Connect your personal computer to any other personal computer in your office or in the world.

**3. You can Telecommute with Amazing Things Modems.**

Work at home and send your data to the office via telephone. Observers believe that 15-20 percent of the office work force will be telecommuting by 1990.

**4. Amazing Things Modems are Direct Links to any Mainframe.**

Access your company's mainframe from your office, from your home or on the road with an Amazing Things Modem.

**5. Amazing Things Modems Overcome Incompatibility Problems.**

Send documents from one personal computer to another, even if the systems are incompatible.

**6. Amazing Things Modems Bring You Electronic Banking and Shopping.**

Many banks now offer banking and investment services over the telephone. And you can shop for thousands of products — from cameras to clothing — with electronic catalogues.

**7. You Can Send and Receive Electronic Mail with Amazing Things Modems.**

Send letters and memos instantly. Mass mail them automatically, across the office or across the country.

**8. Amazing Things Modems are Inexpensive Alternatives to the Telex.**

Send and receive volumes of information overseas at a fraction of the cost of a Telex.

**9. Amazing Things Modems are Fun.**

Through various bulletin boards, you can join clubs, exchange software, advertise, meet people, find jobs and much more.

**10. Amazing Things Modems are Inexpensive.**

The Amazing Things Model "A" Series 1200B Modem is priced at **\$149.95** — about one third the price of an equivalent Hayes Modem. And the 2400B is priced at only **\$289**.

- 300-1200 Baud \$149.95
- 300-2400 Baud \$289.
- Half-Card
- Auto-Answer, Auto-Dial
- Hayes®-Compatible
- Full or Half-Duplex
- Two-Year Warranty
- For Leading Edge® Personal Computers, IBM and Compatibles

# ANNOUNCING DAC-EASY BASE

NEW  
FROM DAC-EASY

## A POWERFUL RELATIONAL DATABASE THAT IS EASY TO LEARN, VERSATILE AND BEST OF ALL, INEXPENSIVE!

Dac-Easy Base is indeed both powerful and easy to use. It offers a multitude of unique features to help you organize, locate, and sort all kinds of alphabetic and numeric data. Dac-Easy Base continues the low price/high performance tradition of the Dac-Easy Series. With worldwide sales of over 300,000 systems, Dac-Easy has become the new leader in software designed for small businesses.

### FLEXIBLE MENU SYSTEM

Dac-Easy Base is actually two systems in one. If you are a novice you will appreciate the special Beginner Menu which contains the most commonly used features for creating, editing, and printing files. The more experienced database user will find the Advanced Menu allows instant access to each and every one of the powerful routines. In both menus, you are only a keystroke away from the context-sensitive help screens. The help screens in Dac-Easy Base are so complete you may never have to consult the accompanying 200 page manual.

### EASY FILE AND REPORT CREATION

Design professional-looking data input screens without leaving the menu structure. There is no need for complex programming. Once created, the edit screen allows you to input and edit your information in a matter of minutes. Also attach special notes to any of your records with the built-in MemoWriter. The MemoWriter is the perfect way to attach specific information to a single record. Custom reports are easy to create without using the available

programming language. Column or page-style reports can be created quickly, and viewed on your computer screen or printed to paper. As with all reports generated by Dac-Easy Base, you can select which records will be included in your report and how they will be sorted. Special headings and subtotals can be added to give you the exact information you need.

### GREAT FOR ADVANCED USERS

Yes, Dac-Easy Base is easy to use, and it is also very powerful. An unlimited number of records with up to 60 fields per record, ability to access up to three files at a time, date arithmetic capability, formula fields for calculations within files, dynamic abbreviations, and keyboard macros are just a few of the powerful features available at your fingertips. Dac-Easy Base can read and convert dBASE II files and can run dBASE II programs.

### GREAT FOR THE HOME

There are unlimited uses for Dac-Easy Base around the home. Keep track of mailing lists, birthday lists, check-books, household inventories, stamp collections, recipes, client lists; and the list goes on and on. Dac-Easy Base is so easy to learn you will create your first database in no time. Call now and take advantage of the tremendous benefits of organized data.

# EDITOR'S NOTE

FLORENCE  
LIDDELL  
ROBINSON

Yesterday I attended a funeral service for Florence Liddell Robinson, whose affiliation with Scholastic Inc., publishers of FAMILY COMPUTING, began in 1925, when she won first prize in the Literary Article category of the Scholastic Writing Awards. In 1930, having graduated with highest honors from Trinity College in Washington, D.C., but unable to find a job because of the Depression, Florence Liddell turned to that same young company called Scholastic, where there was an opening for a secretary. For several weeks Florence Liddell applied the intelligence that had won her academic honors to learning shorthand and was able to handle the work of her new position by the time her job started.

I knew Florence Liddell as Florence Robinson, wife of Robbie, the founder of Scholastic and mother of Richard, the company's current president, chairman, and chief executive officer. That's right, she married the boss, in 1934, as our company history states, and lived happily ever after, until Robbie died in 1982.

Yesterday, for the first time, I heard about Florence Liddell, the outstanding student, and about Florence Liddell Robinson, the strong, warm, and wise wife, mother of five children, relative, neighbor, community worker, friend, and devout believer. But I also learned some other things.

Stories about Robbie's struggles to keep his company afloat and his mission alive are legion around our corporate headquarters. Yesterday I

heard a different twist to the stories.

Herb McCracken, who was with Robbie from just about the beginning of Scholastic, said to me after the service, "It was Florence, and it was my first wife, Helen, who kept Scholastic going. Without their support, we could never have kept the company alive."

And Dick Robinson made me aware of how his mother's sense of responsibility to the company and interest in its activities extended beyond Robbie's death. Florence Robinson, at the age of 75, became aware of Scholastic's involvement with computer-related products and enrolled in a 14-week-long, adult computer-literacy course at the high school where she'd served on the School Board for many years. That's why she was always so interested in FAMILY COMPUTING whenever we met in recent times.

After listening to friends and family members reminisce about Florence Robinson and witnessing their sorrow and their own strength, I came away with a sense of her power, humor, and resourcefulness. And I came away, too, with a feeling of debt, to a woman whose life demonstrated all we can do for the people we touch.

# Certificate Maker<sup>TM</sup>

## Hundreds of different strokes for different folks.

**Reward special accomplishments, serious or silly, with personalized certificates you create yourself in minutes.**

The original Certificate Maker<sup>TM</sup> and new Certificate Library<sup>TM</sup> Volume 1 software could be the best thing that's ever happened to self-esteem.

Because they help you give people the strokes they deserve for their accomplishments at home, at school and at work.

You simply choose a certificate that fits the occasion and the mood, select a border, type in your message, add a date and signature...then print. It's that quick and easy.

You can even create a name file and automatically personalize certificates for everyone in your class or club!

### **Start with Certificate Maker software, a best-seller.**

Certificate Maker includes over 200 professionally designed certificates covering sports, families, kids, religion, academic achievement, business and many other categories along with three dozen foil seals and bright, colorful stickers.

Now Available For:  
Apple II+, IIe, IIc; IBM PC, XT, AT;  
Commodore 64/128; Macintosh

### **Build your award library with our new Certificate Library Volume 1.**

Certificate Library Volume 1 works together with Certificate Maker, and adds over 100 bright, new ways to give people the strokes they've earned at home, school, or work. All-new, all-fun graphics, plus dozens of foil seals and colorful stickers.

For accomplishments at home, school, or work, we have a Certificate, Award, Diploma, or License to make it official—and fun!

And I can play right here  
in the living room!"

## LETTERS

### DAUGHTERS DO COMPUTE!

I receive your magazine every month, and my family truly enjoys it. But I was upset by "How To Get a Reluctant Daughter Interested in Computers" in the December issue.

My daughter Jessica is 13 years old; she and her friends (girls) have to be ordered away from their computer because they spend all their time playing games such as *Sargon III*, *Lords of Conquest*, *Starflight*, *Flight Simulator*, etc.

Jessica has as great an interest in computers as I do, and I'm a programmer. She can even write her own programs in BASIC and LOGO. Obviously, my wife has not set a negative example for Jessica by not learning about computers herself.

We feel that the article did not provide much information about *how* to get a reluctant daughter interested in computers. Our experience has shown that children who are shown how computers work and are allowed to use them will soon get hooked on the magic of computers.

PHILIP CARISTO

Jemez Springs, New Mexico

### WHY PICK THE IIGS?

I was rather surprised to see your pick for the Best Computer of 1986 in the December issue.

First, the Apple IIGS is a new contender in the market. Few people have ever seen one, and certainly not enough people have bought and used the machine to justify the distinction you placed upon it.

Second, the IIGS is simply not the best computer of 1986! Compare it to the Atari 520ST: The two have equal pricing and screen resolution, mice, and Mac-style user interfaces, but the ST is more than five times as fast, and comes with a color monitor included in the price. Apple IIGS buyers must contend with paying another \$499 for theirs. The ST comes with 512K built in, while the GS has only 256K.

I hope this letter clears a bit of the media-induced haze clouding the real Apple IIGS. I otherwise enjoy your magazine very much and look forward to my next issue.

JACOB DONHAM

San Rafael, California

EDITOR'S NOTE: The Apple IIGS was one of the few new models introduced in 1986 (the Atari 520ST,

Amiga 1000, and Leading Edge Model D were introduced in 1985). Besides running new packages that take advantage of its advanced color and sound, it runs virtually all existing Apple II software. We agree with many readers that the price of a complete system is high, but the price should drop as more computers are manufactured and sold.

#### **Z-171 PORTABLE**

In the December 1986 "Buyer's Guide to Portable Computers," an item about the Zenith Z-171 states that "its keyboard has no numeric keypad (maybe the I.R.S. is getting lax!)."

I am an I.R.S. agent currently instructing other agents in the use of the Z-171, and I suggest you take another look at the keyboard. The Z-171 most certainly does have a numeric keypad.

O'NEAL O. GLASGOW  
Johnson City, Tennessee

#### **HOW ABOUT THESE IBM PC-COMPATIBLES?**

In your November 1986 "Buyer's Guide to Computers," you mainly covered the 16-bit computers. There was some very good information in this article, but there is so much yet to be covered.

I am actively seeking information, since I plan to purchase a computer for our home. I am leaning toward IBM compatibles and have come across several unfamiliar names, such as Compaq, Corona, Cordata, Franklin 8000 (sold at Sears), and many others. Is there somewhere to get information on these and other systems!

DOUGLAS W. KEENE  
Collinsville, Illinois

**EDITOR'S NOTE:** See the "Buyer's Guide to IBM PC-Compatible Computers" in this issue, and watch the IBM/MS-DOS column in the Machine Specifics department for continuing developments in the IBM PC and compatibles market.

FAMILY COMPUTING looks forward to letters from all our readers. Please direct your correspondence to: Letters to the Editor, FAMILY COMPUTING, 730 Broadway, New York, NY 10003. Include your name, address, and phone number. We reserve the right to edit letters for length and clarity. Due to the large volume of mail we receive, we are not able to respond personally to every letter.

# HOME-SCHOOL CONNECTION

## GATHER 'ROUND THE CAMPFIRE

### Send Your Kids to Computer Camp for Fun and Learning

BY STEPHANIE ESTERS

Are summers away at camp standard for your kids? Or is it just a thought that crops up in the back of your mind? While talk around the dinner table is still filled with "school-is-such-a-pain" complaints and tales of after-school activities, now's the time to start talking about (and planning for) the summer break.

Consider a camp with a twist—a computer camp. Not sure if your kids would go for the idea? Plenty have enjoyed the experience so much that they want to go back again and again. Six-year-old Robert Hsu and 11-year-old Ann Mitsakos were day campers last summer at Computer-Ed in their hometown of Weston, Massachusetts. "I really liked it," says Ann. "I want to go again this summer."

Her mother, Tilda, is also pleased with Ann's experience. "She was very enthusiastic," says Tilda. "I was delighted that she was so motivated by everything."

And Frank Hsu says that even though his son was one of Computer-Ed's youngest campers ever, Robert overcame his shyness, took full advantage of the camp, and enjoyed himself.

Another father, Jerry Crittenden Sr., of San Antonio, Texas, first encouraged his kids to take advantage of the computer opportunities at Kickapoo Aspects Microcomputer Proficiency (K.A.M.P.) back in 1983.

His daughter Sherri, 16, had no computer experience when she took her dad up on his offer four years ago, but she says she discovered a strong desire to learn more about computers. Both she and her brother Jerry, 14, have been going to the camp ever since.

A high-school sophomore, Sherri was surprised by the various activities at K.A.M.P. in San Antonio. "It wasn't just all computers. There were different activities, and you even had free time." Archery, canoe-

ing, horseback riding, and riflery are some of the activities offered.

#### WHY A COMPUTER CAMP?

Computer camps will teach your children—whether they're novices or hackers—more about computers, while providing as much stimulation, entertainment, and challenge as any other camp.

Whether you send your children to learn how to use a computer, brush up on their computer skills, or get more individualized and challenging instruction, a computer-camp experience rivals that of any other camp. With extracurricular activities that include archery, arts and crafts, drama and theater instruction, tennis, swimming, volleyball, water-skiing,

#### RESOURCES

The following publications can answer any further questions you may have about computer camps.

Benton's *The Complete Guide to Computer Camps and Workshops* (\$10.95; The Bobbs-Merrill Publishing Company, Inc.; (800) 257-8247) is an excellent first source. The book instructs parents on the types of questions to ask, what to look for and expect from a computer camp, and discusses a typical day at camp. A state-by-state listing of camps is provided, complete with costs, minimum ages, experience levels accommodated, and brief descriptions.

The American Camping Association publishes an annual *Parents' Guide to Accredited Camps* (\$8.95). Although not specifically a computer camp reference guide, many of the camps listed offer computer training as part of their general program of activities or as a specialized option. This book is available by writing ACA, Publications, Bradford Woods, 5000 State Road 67 North, Martinsville, Indiana 46151 or call (800) 428-CAMP or (317) 342-8456 in Indiana.

and a host of other land and water sports, your kid might seriously wonder, "Am I at a computer camp?" But the mastery of basic computerese and your child's newly developed confidence with computers will be proof enough.

Ann Mitsakos's mother thinks that this computer know-how gives her child an edge over her peers. "It seems to be a skill that is going to be imperative. I've seen how important basic computer literacy is."

Mike Benton, author of *The Complete Guide to Computer Camps and Workshops*, agrees. Benton says the camps were initially established in response to parents' concerns that the school systems were not adequately preparing their youngsters for the future. "The parents perceived that their children were not receiving enough [computer] education in the school system," he says.

#### COMPUTER-OPTION CAMPS

Author Mike Benton believes that parents' anxieties have lessened somewhat over the past few years, since the introduction of more computer courses into the school curriculum. The multifaceted computer-camping experiences, he believes, are one indication of how sophisticated children, parents, and educators have become with computers.

Since the introduction of computer courses into most school curricula within recent years, many parents are sending their children to a traditional camp with a computer option as opposed to a computer-intensive camp, according to Benton. However, he adds, "If you are trying to have a computer-camp experience, that's still possible." (NOTE: See the accompanying list and description of computer camps.)

#### WHAT PARENTS SHOULD KNOW

If you're considering a computer camp, what do you need to know? Here are some factors you should discuss with camp administrators: the minimal age and experience re-

STEPHANIE ESTERS is FAMILY COMPUTING's researcher.

quirements for the campers, the ratio of children to computers and staff members, and the qualifications of the staff.

Most of the camps provide instruction based on the child's level of expertise—whether he or she is starting out with absolutely no experience (beginner), some experience (intermediate), or as an advanced student. At K.A.M.P., Director Kathy Musgrave says that "most of the kids have some experience," but adds that no one will be out-paced because each child is individually interviewed and placed with children who have similar levels of experience.

If you're thinking of sending a youngster who has never spent time away from home alone, be sure he or she is emotionally capable of adjusting. And, if the camp is not too far from home, consider enrolling your child at a day camp.

Also, make sure your child will have adequate access to the computer and the staff members. Benton

advises no more than "two campers per computer," adding that a "one-to-one ratio" is ideal. As for instructors, make sure that your child will get the attention and guidance he or she needs. Benton adds that parents should check "the qualifications of the person who's running the camp rather than the instructors themselves." Because of their proximity in age and academic interest, college computer-science majors "are some of the best, and they have a better rapport and understanding of what the kids want to do," says Benton.

As for camp accreditation itself, there is no one national organization that examines and approves computer camps. The American Camping Association (ACA) provides accreditation for the camp overall, not just one aspect of it.

Parents should make a list of all their concerns as they choose camps. Only settle on the camp that best answers your questions and puts you most at ease. Remember, it's your money and your child! **rc**

## WHERE TO CAMP OUT WITH COMPUTERS

If you and your children think that gathering around the computer is just as important as singing around the campfire,

you'll want to take a look at these camps. While they're all computer intensive, they offer many other camp activities as well.

| Computer Camp   | Sessions                                  | Costs  | Ages | Computers                                       | Languages            |

# Free Famous hi-tech catalog

A very special guide to what the exciting world of computer and electronics kit-building can do for you.

The informative Heathkit Catalog shows you more than 450 exciting electronic products that will challenge, instruct, and entertain you. You'll find countless kits that you can build and enjoy, from computers and robots to color tv's and a variety of home products. And each is backed by our years of experience and our promise, "We won't let you fail."

## MAKING YOUR WORK LOOK GOOD

### It's the Difference Between a Smart Suit and a Threadbare Tweed

BY CHARLES H. GAJEWAY

When a professional is paid to render services, it is understood that the job in question will be performed to a high standard of quality. And a good part of a client's perception of quality lies in the look and feel of the final presentation. A well-researched report, a painstakingly revised article, or a creative design effort can lose much of its impact—and apparent value—if it is poorly presented or indifferently packaged.

A computer can be an invaluable asset to your professional activities, allowing you to work faster and more accurately. But while using a computer will help you produce quality work, it is not enough to guarantee a quality presentation. That requires extra planning and effort.

Let me pass on a collection of tips, gadgets, and techniques that I use to put a professional gloss on even the most casual effort. After all, you never know what—or who—might send a juicy assignment your way!

#### MOTTO: BE PREPARED

The first step in producing quality work is to make sure that you are always ready. You can't perform effectively if you have to dash out and purchase supplies or learn software every time you do a job. Invest in an inventory of disks, paper, ribbons, envelopes, labels, stamps, or whatever you will routinely require to produce your work. Buy and learn all the software you will need, and keep it scrupulously updated. Knowing how to use an obscure feature can save you hours of frustration.

And don't skimp on supplies. Your client deserves a top-quality product,

and expects it! Trying to shave expenses on materials is downright foolish. Your working drafts can be printed on both sides of a tissue with a five-year-old ribbon, but final copy *must* look and feel as sharp and fresh as possible.

I always use 20 lb., 25 percent rag bond paper with microperforated edges to produce documents for a client. This "computer stationery," as it's sometimes called, gives my work a crisp, durable look and feel that can't be beat. It costs about \$40 per 1,000 sheets, nearly twice the cost of standard, continuous-form paper, but since it's used only for final production, I don't use much.

You can find such paper from Boise Cascade, Rediform, and others. It's available in a variety of colors

and finishes from computer dealers and office supply stores, although the most economical source is generally a mail-order catalog vendor like Inmac ([408] 727-1970) or Pryor ([800] 558-6866).

#### BASIC HARDWARE

Anyone even considering doing professional work on a computer system at home probably has a monitor that will crisply display 80 columns or more, at least one disk drive, and high performance software to enable them to perform complex work efficiently. It can be tempting, however, to make-do with an old or low-performance printer, a false economy in this day of plummeting printer prices. A good printing system is what links your

# HOME OFFICE

work with your client's eyes, and is just as important as your choice of computer and software.

A fast (120-200 cps) dot-matrix printer capable of crisp near-letter-quality (NLQ) text and graphics is a blessing for most users. You can find printers from Epson, Gemini, Brother and others for less than \$300. They are extremely versatile and produce results that are adequate for all but the most demanding word-processing applications. A wide-carriage model (with a 12- or 15-inch carriage) offers maximum versatility, particularly if you want to print out large quantities of numeric data.

Despite the greatly improved quality of dot-matrix printers, notably the new 24-pin types, there is still no substitute for the crisp clarity of a daisy-wheel printer. While office-quality units are still expensive, generally over \$1,000, there is a growing number of surprisingly inexpensive units that print beautifully, if somewhat slowly (12-20 cps). Silver Reed, Brother, Dynax, and others sell such units.

I rely on my workhorse dot-matrix for speedy drafts and graphics, but almost every page of text that leaves my office is printed on the daisy-wheel. People who make charts and graphs might consider a color printer instead.

If having two printers seems extravagant or wasteful, consider this: Such a combination can currently be purchased for little more than an Epson MX-80 cost just a couple of years ago (about \$700). And, it can make your documents look as if they came from a well-equipped corporate office. An efficient and versatile printing system is an investment in your professional image and your clients' satisfaction that will pay itself back many times over.

## FANCY HARDWARE

Some computer peripherals are simply too expensive for many professionals who work at home. But this doesn't mean you can't use graphics tablets, video digitizers, laser printers, multi-pen plotters, and other high speed or heavy-duty items to add pizzazz to your work.

The places and people that own such equipment are frequently willing to share or rent it during times when it would otherwise sit idle. Users' groups, schools, libraries, deal-

ers, and employers are all good sources of "power gadgets" if you have a relatively small job that you are willing to do "after hours," or if you come up with a modest fee. Many Apple dealers, for instance, rent time on the Apple LaserWriter printer.

Ask around, take the time to prepare your job so that it can be run off quickly, and provide your own materials. And be willing to make your own equipment and expertise available to your lenders; a friendly, sharing attitude makes it easier for people to open their resources to you.

## DETAILS, DETAILS

Pay attention to the little things. For my business correspondence, I have a local "instant press" produce letterhead and matching envelopes on rag bond stock at a surprisingly modest cost. I use transparent mailing labels that are virtually invisible on any type of paper, eliminating the "mass-mailing look" from computer-generated correspondence. These labels are available from Avery Label Business Systems Division ([201] 545-6300) and Dennison Manufacturing Co. ([617] 890-6350).

Drafts and reports alike get a title page, are bound in clear report covers with slide-on spines, and mailed in heavy 9" x 12" envelopes. All this effort costs very little (perhaps \$5 on a large report), but adds immeasurably to the look and feel of your work in the client's hands.

When I use a dot-matrix printer to produce final copy, I put in a fresh ribbon. After the job is done, I remove the ribbon and put it in a plastic bag to keep it from drying out. Generally speaking, a new ribbon will produce 30-40 pages of top-quality output, at which point it becomes a "working copy" ribbon, suitable for drafts and informal family use.

For daisy-wheel printers, I buy single-use carbon film ribbons to get the best quality. Since daisy-wheels tend to be slow and the ribbons get used up quickly, I print draft work on a dot-matrix unit, reserving the "good stuff" only to produce the end product.

## THE WORK ITSELF

While top-notch materials and equipment help make your work

look its best, the presentation must be designed with care and concern for the client. Writing should be clear and simple, polished and revised so that your logic and conclusions seem natural and inevitable. Numbers should be double- and triple-checked for input and computational accuracy. Sources should be noted, unfamiliar terms defined, and findings summarized cogently.

Reports and proposals look better and read easier when there is plenty of "white space"; densely packed text looks forbidding and leads the reader to skim too lightly and miss important points. Use at least one-inch margins on the left, right, top and bottom. Try to keep your sentences short, and use bullets to separate ideas.

Graphs convey relationships and trends more clearly than numbers and are an effective way of breaking up large blocks of text. I use boldface for headings, underline for minor points, and italics for major points. But don't overdo any of this; too much bold or italic type weakens the impact.

Practice using your word processor and your printer's features to create attractive page designs and emphasize the contents of your presentation. And don't be afraid to take drastic steps to produce exactly the look you want; use scissors, paste, and a ruler to create a perfect page, then take it to a local copy service to weld your patchwork into a seamless original. You may even want to have special documents typeset by an "instant printing" service to get a super-polished appearance. I'll try just about anything to get a product to look exactly the way I would want to receive it.

## QUALITY IS JOB NUMBER 1

Quality and pride in performance are what professionalism is all about. And the more that you can make your work fill your clients' expectations, the more they will appreciate it. They may not know exactly why your work stands out in their mind, but it will. Whether you are a lawyer, an accountant, an engineer, or an information worker trying to go the extra mile, the better your work looks, reads, and feels, the more impact it will have on your client. And, ultimately, the better off you will be. **FE**

# After WORKSTATION,<sup>TM</sup> other copyholders are unbearable.

Once upon a time, there were three unhappy Bears, very grumpy from leaning over their personal computer, word processor and typewriter all day. With tired eyes and sore necks, their data was filled with errors.

Then, one day, their friend Goldilocks bought them all new adjustable WORKSTATION Space-Saver Copyholders.

With new WORKSTATIONS, each Bear, from small to tall, could position their copy at **just the right reading height and angle...** eliminating unbearable eye and neck strain. And reducing nasty old errors!

Baby Bear liked the sturdy, **non-magnetic** design. Mama Bear liked how the WORKSTATION's space-

saving base slid **under** her terminal—right, left or behind—leaving her desk neat and uncluttered. And Papa Bear liked how the removable clip and line guide securely held his work.

With their WORKSTATION Space-Saver Copyholders, the three Bears can now work happily ever after.

And the moral of our story—the full line of WORKSTATION Copyholders is **just right for everyone!** Don't wait for Goldilocks. Get the bear facts from your Office Products Dealer today!

## TAX SOFTWARE: A QUESTION OF TIMING

BY MICHAEL C. THOMSETT

*Congress meets tomorrow morning. Let us all pray to the Lord to give us strength to bear that which is about to be inflicted upon us.*

—WILL ROGERS

Have you noticed lately how the term "tax simplification" is no longer being used? That's because it has become painfully obvious that the new law is far from simple. In fact, if you're intent upon doing your taxes on your computer, be prepared to buy an update of your program disk next year—and, probably, every year thereafter.

### THE AUTOMATED TAX PROBLEM

There are a number of programs on the market for the preparation of your tax return, and the prices aren't that bad. But the less you pay, the more inflexible the program is likely to be. Your dilemma with inexpensive programs is twofold: the more complex your tax return, the greater your need for automated help (and the greater probability that inflexible software won't do the job). And the simpler your return, the less you need automation (but the greater the likelihood a given program will work).

Many small programs have proven to be inflexible in one way or another. For example, if you have income that must be detailed on a supporting schedule, you must enter it through that schedule's portion on the program. If you enter it directly on the 1040 portion, you may not be able to go back later and revise that final number. With subtle quirks like that, mistakes are still possible.

This inflexibility is made worse by the sweeping changes in the Tax Reform Act of 1986. Now that our lives are complicated by "simplification," you might be better off to wait until the dust settles before buying a program. And if you are already using tax-preparation software, be sure the revised copy is up-to-date.

Some things to be aware of:

1. The revised tax rules are being phased in over the next three years. So what works for the return you're

completing now (for your 1986 taxes) will be obsolete for your 1987, 1988, and 1989 taxes.

2. With any major tax bill, you can expect a "technical corrections" bill to follow within a year. So even if you pay for a revised disk now, it will be wrong at year's end.

3. It will take a while for some features of the new tax rules to be interpreted by the accounting and legal community. It's too soon to say what changes will occur as the I.R.S. interprets the law, but expect a number of decisions during the next six to twelve months that will affect the content of a program you're using today.

4. With any phased-in law, Congress can change its mind. For example, there could be modifications to the tax brackets planned to take effect in 1987 and 1988. Any such change will require revisions to your program.

### PROPER USE OF TAX SOFTWARE

This is not to say that tax preparation software is not practical. If you have a fully updated program and if you know how to use it effectively, you can save time and eliminate calculation and recording errors on your personal tax return.

Who should use this technology? Anyone who files more than the standard forms may benefit from automated preparation and in several ways: in recording a lot of information on disk and avoiding having to change numbers that affect several parts of the return; in printing out final forms; and in creating a permanent record of your year's tax records for future reference.

If your return is extremely simple, involving no itemized deductions, no

supplementary schedules, and no special situations, you probably don't need software to complete it. And remember, tax preparation software will not help you to a) understand taxes or accounting better; b) avoid an audit; or c) lower your correctly computed legal tax liability (but tax software can lower your I.R.S. bill by pointing out legal deductions you might have overlooked). Unfortunately, many people buy software hoping to achieve one or more of these objectives. Be realistic in evaluating your reasons for even thinking about buying a program before you put down your money.

### EXTRA FEATURES TO LOOK FOR

Many programs offer more features than just preparation of this year's tax return. For example, *Tax Preparer* (HowardSoft) has a new Partnership Edition for small businesses needing tax preparation for their partnership returns and a *Real Estate Analyzer* program for property investors. *Tax Preparer* can also be used to store information for next year's tax return.

*MacInTax Federal* (Softview) offers California state tax software at an additional cost of \$45, and this year combines previous personal and business products into a single software package.

*PC/Tax Cut* (Best Programs) accepts data from another program, *PC/Professional Finance*, and has recently come out with *PC/Personal Investor*, which also downloads to the tax software.

*The Tax Advantage* (Double Eagle) accepts data from the popular *Home Accountant* personal finance program, which makes keeping

# SYLVIA PORTER'S PERSONAL FINANCE SERIES MANAGES IT ALL

IBM  
VERSIONS  
INTERFACE  
WITH LOTUS 1-2-3

**Your day-to-day finances. Your financial future.  
And now, your investments, too.**

## Volume 1

### Your Personal Financial Planner

Helps you track your day-to-day financial data, then combines this information with your future financial objectives to produce the most comprehensive and easily-understood financial planning program available.

#### For Your Day-to-Day Affairs:

- **Maintains your electronic check-book** and credit card transactions.
- **Writes your checks** and balances your checkbook.
- **Prepares and monitors your budget.**
- **Classifies and tracks your taxable income and expenses.**
- **Calculates your net worth and generates customized personal financial statements.**
- **Tracks your financial assets** – and your insurance policies.

#### For Your Financial Future:

Leads you step-by-step through a series of questions regarding your financial goals, and your current financial condition. Your answers will enable your computer to determine and print a summary of the amounts you must save each year to meet your financial objectives – in both real and inflated dollars.

#### Each SYLVIA PORTER program:

- **Interfaces with the others in the Series.** You need to enter data only once.
- **Generates unique graphic representations** that display your data in colorful charts.
- **Includes a Customized Report Writer** that prints out any report you want, tailored to your specific needs.

**MORE POWER FOR YOUR DOLLAR**

## Volume 2

### Your Personal Investment Manager

Whether you're a first-time investor or a sophisticated one, this program enables you to efficiently organize, analyze, and manage up to 15 individual investment portfolios. (Unlimited on hard disk)

#### This Program:

- **Manages your investment transactions:** Records, organizes, and classifies all important data on your purchases, sales, and other types of investment transactions.
- **Tracks your investment portfolios:** Displays more than 35 kinds of vital statistical data, plus financial profiles on individual companies.
- **Alerts you to investment deadlines:** Transaction deadline dates for dividends and interest; buy and sell positions; bond maturities; and much, much more.
- **Tracks your retirement investments**
- **Monitors your investment taxes:** Tracks, organizes and classifies your interest and dividend income, and your capital gains or losses. Generates year-end reports.
- **Includes Telecommunications Access to outside Database Sources:** Lets you access all major outside databases for automatic price updates (modem required).
- **Includes Investment Strategies and Fundamental & Technical Analyzers**

# Train with NRI for a servicing

**NEW!**

Train with the newest Sanyo 880 Series Computer—it's fully IBM-compatible and runs almost twice as fast as the IBM PC!

## Get started now by building this fully IBM PC compatible computer

Now you get it all... training for America's fastest growing career opportunity... training to service all computers... training on the newest total computer system, the Sanyo 880. Only NRI can give you the well-rounded training you need, because only NRI gives you a complete computer system... computer, monitor, disk drive, software, even test instruments like a digital multimeter and logic probe to work with and keep. It all adds up to training that builds the knowledge, competence, and ability you need to succeed as a computer service specialist.

### Get inside the newest, fully IBM PC compatible Sanyo Microcomputer

As an NRI student, you'll get total hands-on training

as you actually build your own latest model Sanyo 880 Series computer from the keyboard up. It's fully IBM PC-compatible and, best of all, it runs programs almost twice as fast as an IBM PC. As you assemble the Sanyo 880, you'll perform

demonstrations and experiments that will give you a total mastery of computer operation and servicing techniques. You'll do programming in BASIC language—even run and interpret essential diagnostic software.

# high paying career computers

at your own convenience, backed at all times by your own NRI instructor and the entire NRI staff of educators and student service support people. They're always ready to give you guidance, follow your progress, and help you over the rough spots to keep you moving toward your goal.

## **100 page free catalog tells more . . . send today**

Send the postage-paid reply card today for NRI's 100 page catalog that gives all the facts about computer training, plus career training in robotics, data communications, TV/audio/video servicing, and many other fields. If the card is missing, write to NRI at the address below.

## **Understanding you get only through experience**

You need no previous knowledge to succeed with NRI. You start with the basics, rapidly building on the fundamentals of electronics with bite-size lessons. You perform hands-on experiments

with your NRI Discovery Lab and then move on to master advanced concepts like digital logic, microprocessors, and computer memories.

## **Learn at home in your spare time**

You train in your own home

**NRI** SCHOOLS

# PERSONAL FINANCE

track of your money much easier.

What appears to be missing in tax programs is a comprehensive documentation procedure for those claiming the expense of a home office. For the thousands of business people working at home, a special section for calculating allowable deductions (such as depreciation, prorated utilities, property taxes, and insurance) would add a great deal to tax-preparation software.

A likely reason for this exclusion is the complex variations that are possible. Qualifying for a home-office deduction is not easy, and there are several different tests for meeting this deduction. (NOTE: See "Why Pay More? Tax Write-offs For Your Home Business" in the November 1986 issue of FAMILY COMPUTING.)

## GETTING OUTSIDE ADVICE

Even with the exceptions to the

rule, the lack of flexibility, and the need for annual updates to your program, you can find good use for tax preparation software. But that doesn't mean you can relax. You may still need outside professional help for advance planning. Many home-based entrepreneurs, for example, will benefit from paying a tax accountant for semiannual reviews. Software, no matter how well it works, does not eliminate the need for knowledgeable outside advice.

So you go to an accountant, review your mid-year status, and make a few planning decisions. At that point, you might come full circle and realize it is more practical to have the accountant do your tax return for you.

This offers three advantages. One, you do not need to be concerned about following directions for a variety of forms and schedules, as well

as the software itself. Two, if you are audited, the preparer will accompany you on the dreaded visit to the I.R.S. Three, it eliminates the need to automate your tax return altogether.

Most accounting firms use professional tax software or go to an outside service. These more advanced programs are designed to process tax information for a large number of people. Beyond the budgets and needs of home-based business owners, this software is updated continuously and offers much greater flexibility and sophistication than most of the programs you're likely to consider.

For the cost of having your return done professionally, an accountant might be the best way to go—at least for the next two or three years—unless you want to pay for software updates on a recurring basis.

## TAX-PREPARATION SOFTWARE REVIEW

The programs listed below all provide the most common individual tax forms: Forms 1040 and 2441, and Schedules A, B, C, D, E, G, SE, and W. Additional schedules and forms offered are listed separately.

| Title/Publisher/Price  | Hardware   | Additional Schedules and Forms  |
|--|--|---|
| F.I.T.<br>South West Computing<br>(505) 589-0999<br>\$60; \$40 (update)                                  | CP/M format,<br>IBM PC/PCjr                          | Schedules F, R.<br>Forms 1040A, 2106, 2210, 3468,<br>4797.  |

NOTE: Titles listed for the IBM PC/PCjr will also run on many compatibles. Check with your dealer or the publisher for complete compatibility information.

## WHO CAN BENEFIT FROM TAX-PREPARATION SOFTWARE?

In general, you will fit one of three types of taxpayers:

**Type A:** Your return is rather simple, with a minimum of schedules to file. You probably do not need software to organize your return and are better off filling out the forms by hand.

**Type B:** You have to file a number of supporting schedules and itemize deductions, and you can use software to organize your records for this year and next year.

**Type C:** Your tax return is complicated, and you need to plan well in advance to minimize your tax liability. The new tax law has made this chore worse than ever. You might benefit from a flexible form of tax-preparation software, but you should also hire an accountant to advise you. In many cases, you will be better off having that accountant prepare your tax return. Spending your money for personalized advice might be a better investment than buying software right now.

A final point: If you use your computer in the operation of a home-based business, you can write off software that has a direct business application. But the Tax Reform Act tightens up on the deductibility of personal and work-at-home expenses. Since these programs are designed primarily to complete your personal return, chances are you won't be able to claim a deduction. 

# GOODBYE, IBM...

## THANKS FOR THE MEMORIES

Have you ever noticed how time seems to change everything? Fashions change. Technology changes. Even the microcomputers we use change. Maybe that's why so many of our customers are saying goodbye to IBM in favor of a "good buy" from Wells American.

As time goes by, more and more computer users are realizing what an extraordinary value our A★Star II® truly is. It's the *only* AT class microcomputer that can run at 6, 8, 10 and 12 MHz! It's also the *only* PC/AT compatible that's "network ready." Better yet, each A★Star II now comes with your choice of keyboards - the original AT version or the enhanced "RT" style. Best of all, A★Star II prices start at only \$995!

But what about quality and support? Don't worry! We've been making microcomputers *longer* than IBM! And it shows. Our A★Star® computers have been top

rated by leading industry trade journals. Even so, we've heard that some "big blue" old-timers still worry about trading their IBM "security" blanket for better priced, higher performance equipment. (Remember how difficult it was to give up *your* baby blanket?) That's why we've arranged

for RCA, one of the world's largest technical service organizations with 18,000 employees, to provide low cost, nationwide maintenance for our A★Star II. And if that's not enough, every unit includes free schematics and a no risk money-back guarantee.

THE A★STAR II IS MADE IN THE USA.

Still need a blanket? We've got you covered! Try out one of our A★Star II's and we'll send you one. It's baby blue, monogrammed and...it's absolutely free! We'll also include a \$395 option, at no charge, with your first A★Star II purchase. This offer is limited, so call or write us today. Just because you'll be saying goodbye to IBM doesn't mean you'll have to say goodbye to quality, support or security. Besides, at least you'll still have your memories...and your money!

# ENTERTAINMENT

## HOW GAMES ARE PLAYED:

### An Informal Survey

BY DAVID HALLERMAN

Back in August of last year, we ran our second survey of gaming and entertainment software. Some eagle-eyed readers may have noticed that we said that we'd publish the results of the survey in the February 1987 issue, but here it is March. The reason for the delay? You overwhelmed us with your responses!

Many thanks to the thousands of readers who took the time to fill out our survey. In an extrapolative poll of one out of five respondents, this is some of what we heard.

#### Who You Are

|                        |     |
|------------------------|-----|
| MALE                   | 77% |
| FEMALE                 | 23% |
| LESS THAN 20 YEARS OLD | 41% |
| 20 YEARS OR OLDER      | 58% |
| AGE NOT INDICATED      | 1%  |

#### The Machines That Play Games

As the numbers show, the top three computers used for gaming by respondents to the survey are the Commodore 64 and 128 duo (28 percent); the Apple II Plus, IIe, and IIc trio (27 percent); and the IBM PC and compatibles (24 percent). Please note that since many respondents told us they have more than one computer, the percentages total more than 100 percent. For example, one reader owns an Apple II Plus, an Atari 800, and an IBM PC, and was therefore counted for all three.

| Computer               | Ownership |
|------------------------|-----------|
| ADAM                   | 8%        |
| AMIGA                  | 2%        |
| APPLE II SERIES        | 27%       |
| ATARI 800/XL/XE SERIES | 14%       |
| ATARI ST SERIES        | 3%        |
| C 64 AND C 128         | 28%       |
| IBM PC & COMPATIBLES   | 24%       |
| MACINTOSH              | 1%        |
| TANDY COLOR COMPUTER   | 2%        |
| OTHER                  | 6%        |

DAVID HALLERMAN edits the software reviews in FAMILY COMPUTING.

#### How Long Gamers Have Been Computing

Obviously, from the attached numbers, the majority of FAMILY COMPUTING readers who are game players and who respond to surveys are not newcomers to computers. In fact, a whopping 61 percent have had at least one computer for more than two years.

|                      |     |
|----------------------|-----|
| LESS THAN ONE YEAR   | 8%  |
| ONE TO TWO YEARS     | 30% |
| TWO TO THREE YEARS   | 22% |
| THREE TO FOUR YEARS  | 17% |
| FOUR TO FIVE YEARS   | 12% |
| MORE THAN FIVE YEARS | 10% |
| NOT INDICATED        | 1%  |

#### Rules About Playing Games

Only a quarter of the survey replies were from people who follow various rules at home concerning playing games. Some of the rules mentioned were no games until homework is done, no food or drink near the computer, and a limit on time playing games (generally about an hour).

|                        |     |
|------------------------|-----|
| YES, THERE ARE RULES   | 25% |
| NO, THERE ARE NO RULES | 74% |
| NOT INDICATED          | 1%  |

#### Who People Play Games With

While the majority of respondents play games by themselves, a large number play with friends as well. And although most games are played one person at a time, almost half the time our respondents play in groups—either adults and kids together or just kids.

|                          |     |
|--------------------------|-----|
| YES, I PLAY WITH FRIENDS | 44% |
| NO, I PLAY ALONE         | 56% |
| ONE PERSON AT A TIME     | 84% |
| ADULTS AND KIDS TOGETHER | 45% |
| KIDS IN GROUPS           | 42% |
| ADULTS WITHOUT KIDS      | 32% |

#### What Computer Games Have Replaced

It's encouraging to see that kids are still doing their homework despite the lure of computer games. However, watching television and playing traditional board games have gone by the wayside for many readers. In addition to the choices below, more than one respondent indicated that he or she "sleeps less" since starting to play computer games.

|                         |     |
|-------------------------|-----|
| WATCHING TV             | 81% |
| PLAYING BOARD GAMES     | 53% |
| GOING TO MOVIES         | 24% |
| READING BOOKS/MAGAZINES | 18% |
| PLAYING SPORTS          | 16% |
| LISTENING TO MUSIC      | 14% |
| SOCIALIZING             | 10% |
| DOING HOMEWORK          | 8%  |

#### How Much Do You Spend?

Not too many surprises from this question. Again, the numbers total more than 100 percent, since a few respondents checked off more than one price range.

|                 |     |
|-----------------|-----|
| LESS THAN \$10  | 7%  |
| \$10 TO \$20    | 20% |
| \$20 TO \$35    | 49% |
| \$35 TO \$50    | 28% |
| MORE THAN \$50  | 2%  |
| NEVER BUY GAMES | 3%  |

# STAY HOME AND PLAY.

Why go out when you can have so much fun at home? Just take a gander at the kind of excitement Mindscape has to offer. With *Indoor Sports*, you can play darts without putting holes in your walls, ice an opponent in air hockey, become a ping-pong pro, and pick up some spares without venturing into an alley.

As a Harrier jump-jet ace in *High Roller*, you'll be doing barrel rolls toward designated targets without waking the neighbors.

*Bop'n Wrestle* puts you in the ring with 10 of the biggest, baddest bruisers ever to perfect the turn-buckle fly. Prepare to take evasive action with *Infiltrator*. Foil your foes from your 'copter's cockpit and then convert to covert ground action behind enemy lines. In *Balance of Power*, you are the President. And the burden of global responsibility seems so real you may wonder why you don't have Secret Service protection.

What do you have to lose? For much less than the cost of a night on the town, Mindscape makes home sweet home a more exciting place to be.

**Mindscape**  
Software that challenges the mind.

*Indoor Sports* is available on C64 & C128. *High Roller* is available on C64 & C128 and Atari ST. *Bop'n Wrestle* is available on Apple II family, IBM & compatibles, C64 & C128 and Atari 800. *Infiltrator* is available on Apple II family, IBM & compatibles, C64 & C128 and Atari 800. *Balance of Power* is available on Apple II family, Macintosh, IBM & compatibles, Amiga and Atari ST. Visit your retailer or call 1-800-443-7982 (in Illinois 1-800-654-3767) for VISA or MasterCard orders. ## ENTERTAINMENT

### How People Find Out About Games

Basically, the answers here can be divided into two categories. Most of the time, our respondents learn about games by reading magazines, either reviews or ads. And about half the time, they hear about games by talking, either with friends or with salespeople.

MAGAZINE REVIEWS 79%

MAGAZINE ADS 78%

FROM FRIENDS/ASSOCIATES 49%

IN STORES 48%

TELEVISION ADS 6%

### What Gamers Enjoy Reading About Most

REVIEWS OF GAMES 83%

TRICKS AND HINTS 71%

LIST BEST GAMES OF THE YEAR 70%

STRATEGIES ON PLAYING 66%

GUIDE TO BUYING GAMES 60%

ANALYSIS OF GAME GENRES 39%

INTERVIEWS WITH DESIGNERS 25%

HISTORY OF GAMES 12%

### The Popularity Factor: What Types of Games Are Enjoyed Most

What do we mean by Popularity Factor? If a game genre received one vote from each respondent, its Popularity Factor would be 1.00; two votes and the Popularity Factor would be 2.00. Each genre could get more than one vote per reply because we asked readers for their family members' favorite types of games as well as their own. The numbers below are best judged by comparing one to another. For example, while Political/Military/Strategy (PMS) games, such as *Lords of Conquest*, had a Popularity Factor of 0.70 (seven-tenths of a vote per respondent), Strategy/Arcade games (like *Archon*) had a Popularity Factor of 1.32—almost twice that of PMS games.

| Game Types                      | Pop. Factor |
|---------------------------------|-------------|
| ARCADE                          | 1.88        |
| STRATEGY/ARCADE                 | 1.32        |
| TEXT/GRAPHIC ADVENTURES         | 1.20        |
| SPORTS                          | 1.17        |
| REAL-LIFE SIMULATION            | 1.17        |
| ROLE-PLAYING ADVENTURES         | 1.16        |
| TEXT-ONLY ADVENTURES            | 0.91        |
| STRATEGY & TACTICS              | 0.90        |
| POLITICAL/MILITARY/<br>STRATEGY | 0.70        |

## The Top Ten Computer Games

After registering readers' favorites, it became clear to us that games that come in series—such as *Zork* and *Ultima*—are among the most popular. And, somewhat surprisingly, the venerable *Pac Man* is still popular enough to rate 10th place. (Note that respondents named approximately 3 games each as their favorites.) In addition, certain other fascinating figures came out. For instance, if you total the replies for three popular airplane simulators (*Jet*, *F-15 Strike Eagle*, and *Flight Simulator II*), there were votes from a large 26 percent of respondents. People love to fly! And if you put together all the numbers for various baseball programs (*Hardball* and *MicroLeague Baseball* were mentioned most often), you come up with a 12 percent response rate—enough to put our National Game in the top ten. (NOTE: Fans will want to read next month's issue, as Tug McGraw, erstwhile star relief pitcher for the Mets and Phillies, looks at baseball game software.)

|                              |       |
|------------------------------|-------|
| 1. ZORK I, II, AND III       | 16.6% |
| 2. ULTIMA II, III, AND IV    | 14.5% |
| 3. FLIGHT SIMULATOR II       | 13.8% |
| 4. KING'S QUEST I AND II     | 12.5% |
| 5. ONE ON ONE                | 9.8%  |
| 6. SUMMER GAMES I AND II     | 8.6%  |
| 7. LODE RUNNER               | 7.9%  |
| 8. HITCHHIKER'S GUIDE GALAXY | 7.8%  |
| 9. JET                       | 7.4%  |
| 10. PAC MAN                  | 6.9%  |
| <b>Honorable Mentions</b>    |       |
| 11. WIZARDRY SERIES          | 6.7%  |
| 12. ARCHON I AND II          | 6.5%  |
| 13. KARATEKA                 | 5.8%  |
| 14. BARD'S TALE              | 5.5%  |
| 15. WINTER GAMES             | 5.3%  |

## We Have 10 Winners!

As promised, we have randomly chosen 10 people who responded to the survey as entertainment software winners. Samuel Chen, San Jose, California  
Onnie L. Duvall, Reistertown, Maryland  
Jane Hall, Shreveport, Louisiana  
Nancy Hardin, Aurora, Colorado  
Bradley Jackson, St. Albans, Vermont  
Steven B. Katz, St. Louis Park, Minnesota  
Ronnie Koshimizu, Mission Viejo, California  
Matt Newman, Fairdale, Kentucky  
George F. Vonas, Toronto, Canada  
Mary Wenderoth, East Northport, New York

## ACKNOWLEDGMENTS

We want to thank two companies for the help in tabulating this survey: Applied Engineering (Carrollton, Texas), which supplied us with a RamWorks III memory expansion card for the Apple IIe, and Apple Computer (Cupertino, California), which lent us a 800K UniDisk 3.5" drive. 

# Today's Cure for the Term Paper Blues

The term paper...sleepless nights, worry-filled days, and no time left for anything else. With all that organizing and writing to do, the thought of just getting started gives you a serious case of the blues. Your computer and *Term Paper Writer*™ are the only cure.

**The Notetaker:** Helps you collect, save, sort and find information. It might even help you find the perfect topic.

**The Outliner:** Puts your ideas into subject groups and gives them the right flow, so your conclusion isn't part of your preface.

**The Writer:** A complete word processor that breaks writer's block and turns your thoughts into crisp, printed pages that look top-grade.

**The Footnote & Bibliography Compiler:** No more late-night thumbing through style manuals. The Compiler does it for you.

**Term Paper Writer:** Because making the grade doesn't have to be a full-time job. Or give you the blues.

For Commodore 128, IBM PC, PCjr, Tandy 1000 and 100% Compatibles, and Apple II Series Computers.

**TERM PAPER WRITER**  
The design-software term paper organizer

## MODEMS IN THE MAINSTREAM

### Tips for Buying the Practical Peripheral

BY RIC MANNING

It wasn't too long ago that a modem was considered a pretty exotic device. Most people who installed a computer at home would quickly add a printer to their system. But modems were like voice synthesizers and appliance controllers—something reserved for the dedicated hacker.

Times change, though. Today, one out of every five computer owners has a modem at home, according to Link Resources, a New York market research firm. In three years, say the market research people, nearly one in two computer owners will also buy a modem.

It's little wonder that people get excited about going on-line. Once you teach your computer to use the telephone, you have opened a window into the world of information and recreation.

A modem plugs a computer into global electronic-mail networks (with MCI Mail, for instance, you can send a message overseas for as little as \$1), game-playing systems, banking and investing services, enormous stockpiles of public-domain software, and libraries full of research material.

#### AN ALCHEMIST'S VOCABULARY

Getting connected, however, can seem intimidating. Data communication has its own alchemist's vocabulary of bits, bauds, parities, parameters and protocols. But boiled down to the essentials, choosing the right modem and communication software can be no more difficult than choosing the right word processor.

Although the modem and the software must work together (and both must work with your computer), the modem is the more critical part of the equation. (Next month, watch for

a guide to buying communications software.) And many modems are sold with software.

Most of today's modems have direct connections. All you do is pop in the standard telephone clip-plug to connect the modem to the wall jack. A double jack on the modem will let you connect the modem to the telephone handset at the same time.

The old-fashioned and less reliable acoustic modems are best used with portable computers. This creates a problem if you need to transmit from a hotel room or phone booth where the wall jack is unavailable.

Here's a look at some of the factors to consider when shopping for a modem.

#### SPEED (BAUD RATES)

If you fly to Europe, you can travel on a Boeing 747 or on the Concorde. The Concorde is faster and maybe you'll get better service, but it costs more. Traveling on either type of plane will get you to Paris safely. Modems offer the same sort of choices—and higher speeds and more amenities are generally going to cost more than "basic transportation."

For a lot of people, 300 baud (300 bits per second) is all the horsepower they'll need. At that speed, it takes about 60 seconds to transfer a page of text. That's fast enough for reading notices on electronic bulletin boards, sending brief electronic letters, and checking a stock price.

These relatively slow modems, however, are fast becoming the eight-track recorders of the computer world. The faster 1,200-baud models are getting cheaper all the time. A faster modem is almost a necessity for large-scale text transfers or software downloading.

The newer 2,400-baud modems can now be used with a large number of information services and bulletin boards, particularly those that have large software libraries. These super-fast modems (the text "flies" across your screen as it's being sent or received) are great for small-business users but are still priced a notch above the average on-line user's budget.

#### BRAND NAMES

In the modem business, there's one stand-out player and there's the cast. In 1985, Hayes Microcomputer Products built almost half of the

RIC MANNING edits Bulletin Board Systems (11 Ferry Lane West, Westport, CT 06880), a newsletter about personal telecommunication. He welcomes electronic mail on The Source (ID: STG007) and CompuServe (ID: 72715.210).

# How to choose an online service

Online services make your PC come alive. But before you settle on one, here are some helpful tips.

## 1 What are you going to need it for?

Some services cater primarily to investors, while others are trying to be *all* things to *all* people. The Source, on the other hand, offers a carefully developed blend of sophisticated communications tools, easy-to-find information and active Special Interest Groups that can be used for business support, personal enjoyment and household education.

## 2 What will it cost to learn?

After you find a couple of services that seem to fit your needs, ask about their tutorial offerings. If they don't have any, forget it. Beware of services that offer free connect time without a tutorial. This time gets used up fast and then you're on your own.

The Source has a free, award-winning tutorial that's an easy, step-by-step guided tour of services including business and investing, travel and communications. It gives you all the time you need to learn because there are never online charges for the tutorial.

## 3 Check out the customer support staff.

Can you get through to them easily? Are they helpful? Do you like them? Ask tough questions about the service and see if they can handle them. Our customer support number is 1-800-336-3330, by the way.

The Source is a carefully developed package of easy-to-use online services including electronic mail, computer-to-computer conferencing, travel services, business and investing information, Special Interest Groups, electronic bulletin boards, news, weather and sports, education, games, shopping and more.

## 4 Be sure you get your money's worth.

This is tough sometimes. Services that advertise that they cost less, can end up costing more. Services that look like they offer everything can be a disappointment when you join and have to pay extra for the services you really wanted.

Before you join, find out which services have surcharges or premium program charges. The Source is one of the few networks that doesn't offer a lot of "a la carte" pricing. We actually charge *less* for heavily used services like our Special Interest Groups.

## Try The Source® now and we'll pay your registration fee

This limited-time free offer is a great way to find out if The Source is the online service you want. To join The Source today, call 1-800-336-3366\* and give the operator the claim number below. The Source will pay for your \$49.95 registration fee.\*\* You may also purchase the SourcePak Users Manual at a special reduced rate of \$12.95 (a \$19.95 value) Claim # **DJR33**

**1-800-336-3366\***

**The Source**  
INFORMATION NETWORK

The Source, P.O. Box 1305, McLean, VA. 22102

\*In Canada and Virginia

# TELECOMPUTING

1,200-bps modems sold in the United States. A handful of others—Microcom, Ven-Tel, U.S. Robotics, and Novation—shared the rest.

Just as IBM set the standards for PCs, Hayes calls the shots in the mo-

dem world. Hayes products use a certain set of commands (ATtention, for example, tells the modem to wake up and await further instructions), and many software companies have written their communica-

tion programs to use those commands. So the other modem makers strive to make their devices "Hayes compatible" to take advantage of that software.

A modem that's not Hayes compatible isn't necessarily a bad modem, but it may require specialized software to work properly. And, if that software doesn't do exactly what you want it to, you may have no other options.

## GUIDE TO MAJOR MODEM MANUFACTURERS

(Unless otherwise noted, all modems have Auto-Answer and Auto-Dial capability and can dial through both Tone and Pulse systems.)

| Manufacturer                                   | Model               | Price | Baud Rate | Int./Ext. | Hayes Comp. | Bundled Software | Comp/Int.   |

<sup>1</sup>No Auto-Dial. <sup>2</sup>Pulse Dial Only.

## INTERFACES

Like a printer, a modem needs a "bridge" to connect it to a specific computer. For Apple II computers and IBM PCs and PC compatibles, modems can be built right on a circuit board and plugged directly into one of the computer's internal slots, or they can be connected to an RS-232C serial port.

Other computers, such as the Commodore 64 and the 8-bit Ataris, have their own special ports for connecting devices, such as disk drives, printers, and modems. Using the built-in ports, however, can limit your choice of modems to those that can make that connection.

The most common way of plugging in a modem is with a device called an RS-232C interface, which comes standard on many computers. With an RS-232C port and special cables for your particular computer, you can choose most any type of external modem.

## QUESTIONS

The chart that accompanies this story lists the features of several major modem brands and models. Here are some other questions you should ask when comparing modems:

Does the modem have a built-in speaker? Without one, you won't know if you've dialed a wrong, disconnected, or busy number.

Can you switch between voice (talking on the telephone) and data (talking through the computer) modes? This switching feature is particularly helpful when you're trying to swap files with another person and need to talk things over as you work.

Will the modem automatically sense and adjust baud rates? A good modem will listen for the baud rate of the host computer and match it or step down to a slower speed if there's a poor connection. **EC**

# EVERY BUSINESS NEEDS AN IBM-PC

## WHO WANTS TO PAY IBM PRICES?

### WE HAVE A SOLUTION!!!

FACTORY  
DIRECT

**\$799.**  
STANDARD  
MODEL

**100% Compatible PC-XT**  
**BASE PRICE \$950.00 LEASE \$39/MO**

**With 20 MEG Hard Disk \$1399.00 LEASE \$56/MO**

Upon Approved Credit

Our **PC-XT SUPER TURBO COMPUTER** runs all the popular Business Programs, like Lotus 1, 2, 3, Word Perfect, Wordstar, dBase III, Homebase, Sidekick, and Flight Simulator. In addition to running the programs at the standard IBM clock speed of 4.77 Mhz, it also runs at 8 Mhz — almost twice as fast as IBM.

ACS has developed the fastest, most powerful XT and AT computers available today. We have also researched the numerous software programs available to automate your office. If you are considering buying a computer, call ACS. We can recommend the software and hardware system that will best solve your business needs.

#### HERE'S WHAT YOU GET

ACS-Turbo Mother Board 4.77/8.0 Mhz  
640K of RAM  
Two 360K Floppy Drives  
Heavy Duty 135 Watt Power Supply  
Keyboard New "AT" Type with Large Enter Key  
Parallel Printer Port  
Monochrome Graphics Display Card  
High Resolution Mono Monitor  
with Swivel Base and Anti-Glare Screen

#### OPTIONS

|                              |          |
|------------------------------|----------|
| 20 MEG Hard Disk             | \$449.00 |
| 20 MEG Tape Back-Up          | \$595.00 |
| Clock/Calendar               | \$ 59.00 |
| Internal Modem 300/1200 BAUD | \$199.00 |
| Okidata 192 Printer          | \$399.00 |

#### PROGRAMS INCLUDED

Included in the purchase price is MS-DOS, the standard IBM operating system. With our Hard Disk Computer, you also get HOMEBASE, a general purpose multi-function program to perform word processing, electronic filing, and data base management. HOMEBASE has a built-in calendar, with monthly, weekly, and daily scheduling. The Homebase Calculator lets you perform calculations on the monitor and the ability to print a paper tape if desired. HOMEBASE also includes a communication program with autodialer for communication with other computers (requires a modem).

5 YEAR WARRANTY AVAILABLE

#### GUARANTEE & WARRANTY

We guarantee you will be delighted with our ACS-Turbo Computer or return it within 30 days for a refund (less shipping charges). We warranty our Turbo Computer 100% Parts & Labor for 1 year. We believe our computer is even more reliable than IBM — that's why we're offering a five-year extended warranty for only \$30.00 a year. Order early for the holidays — delivery may take over 30 days.

#### HOW TO ORDER

Call us at (818) 889-1092. We have experienced salespeople to advise you with your computer requirements. Ask for our experts — ask for Department FD.

You can charge our ACS-Turbo Computer with a VISA or MasterCard. We also have a lease plan available for qualified businesses, with payments from 36 months to 60 months.

# MACHINE SPECIFICS

## APPLE

BY CHARLES H. GAJEWAY

Publication deadlines being what they are, 1987 has long begun for you, but still lies a bit away as I write this. It's a good time to take stock and see where we stand in the Apple world.

This is my seventh year of involvement with personal computers, and I am just as enthusiastic about their potential and power today as I was the very first time I booted *VisiCalc* on my Apple II Plus and felt horizons and limitations disappear. Since then, a seemingly endless stream of innovative and useful products has held my attention and allegiance firmly in the Apple world.

**Life A.V.** After *VisiCalc*, there was *VisiPlot*, then a series of better and better word processors, along with the 80-column screen display. Then came memory expansion with the introduction of Titan cards and RGB cards. Apple IIe followed with ProDOS, a big improvement, and later, *AppleWorks*. Products such as affordable hard-disk drives and the Apple 80-column color monitor keep coming for the II line. And, of course, the Macintosh came along to define the state of the art in computing, and to capture me.

In future columns, I'll try to pay heed to the three Apple lines—the old Apple II world (II Plus, IIe, and IIc), the new Apple II world (Gs), and the Macintosh.

**Apple II.** The spotlight of late has been focused on the new IIGs. Its expanded memory, increased speed, superior graphics, and sound are exciting new sources of power for computer users. But as I have been exploring the Gs and related new products, I can't help marveling at

how much of what is being done on the Gs can be accomplished just as well on a II Plus, IIe, or IIc.

This is important, especially for II Plus and IIc owners who have no upgrade path to the Gs and may be feeling a bit abandoned. There is plenty of life and power left untapped in Apple's older machines. If you want more speed, you can add an accelerator card. If you want more memory, you can add a memory expansion card. If you want RGB output or better sound, you can add the appropriate cards.

About the only thing you can't do with your old II that you can do with the new Gs is get high-resolution color graphics. Color graphics are a bonus, but for routine, everyday tasks, you just don't need them.

**Macintosh.** Recently, a good deal of my corporate life has revolved around integrating the unique power and capability of the Macintosh into an environment that had elevated the letters IBM into an icon of near worship. The resulting excitement and accomplishment have been gratifying, especially in light of a slow and difficult start.

There are signs that excitement for the Mac is spreading across corporate America, welcome news to those who recognized the Macintosh as the true state of the art in personal computing, and have taken a lot of grief from those who followed a "safer" path. And there is more than a little humor involved, at the expense (finally!) of the IBM elitists.

I recently burst out laughing after reading through a popular IBM-oriented publication. Why? Because the entire magazine was devoted to telling its readers how to turn an IBM PC/AT into a Macintosh, and how productive it would be—all for the modest price tag of \$15,000! Good things truly do come in small, reasonably priced packages.

**Speaking of price!** Now that the Mac Plus is selling to corporations and Apple is about to introduce a new model of the Mac, prices on the old Fat Mac (with 512K and a disk drive) are falling into the \$1,000 range. That makes it less expensive than the new IIGs, and about the same price as the Atari 1040ST.

**Genie's Gray Ghost.** I just signed up with GE's bargain electronic information service, GENIE.

It's only \$5 per hour for 1200-baud use during non-prime time (nights and weekends). Those of you who have modems and subscribe to GENIE, please send mail (with questions, comments, and tips) and watch for Gray Ghost on the CB channel.

CHARLES H. GAJEWAY can be reached on GENIE (ID: C GAJEWAY) and The Source (ID: BBQ794).

## ATARI

BY JOHN J. ANDERSON

First off, I'd like to thank all of you who have taken the time to contact me by mail or e-mail. I'm listening. One message is coming in loudly and clearly: how many of you long for more programming material. This month's column is for you.

**8-bit Tips.** Here are some tidbits for our 8-bit Atarians (tested under DOS 2.0): To determine which revision of Atari BASIC you have, type `PRINT PEEK (43234)`. If the result is 162, you have revision A; if it is 96, you have revision B; if it is 234, you have revision C.

Need to format a disk from BASIC? You don't have to back out all the way to DOS. Do it with a one-line BASIC program: `1 XIO 254: #1, 0, 0, "D:"` Load this program and then don't forget to put in a new disk before you run it! Want to format a disk in the direct mode? Try typing `X=USR(3352)`.

Have two files on disk with the same filename? This can be a nasty occurrence, but there is a way around it: Copy the loadable (first) file to another disk as a backup. From BASIC, type `POKE 3118,0 (RETURN)`. Go to DOS, and rename the file (only the first file will be renamed). Go back to BASIC and type `POKE 3118,184 (RETURN)`. You should now be able to access both disk files on your original disk.

Want to disable the BREAK key in your own programs? Insert the following after every `GRAPHICS` command: `POKE 16,64:POKE 53774,112`. Remember, once is not enough with this one. You've got to keep disabling the BREAK key after each of the commands listed above.

Want to disable the entire keyboard? `POKE 16,255` will do that for you.

# PERIPHERAL PRODUCTS FOR YOUR ATARI, COMMODORE AND APPLE

## MICROPRINT 2000

MICRO MERICS MICROPRINT 2000 delivers big performance without knocking a big dent in your budget. This wonderfully affordable, fast 120 CPS, letter quality built-in, DOT MATRIX PRINTER has all of the features usually found only in more expensive models. MICROPRINT 2000 has graphics modes, tractor/friction feed, foreign language characters, bidirectional printing, snap-in cassette ribbon, user replaceable head, and standard parallel interface. With serial interface option, and fine near letter quality, it is no longer necessary to transfer your draft to the typewriter.

## PARALLAX-AT

MICRO MERICS PARALLAX-AT is one of the best graphic and letter quality printer interfaces available for ATARI® computers. Guaranteed to meet all of your ATARI printer interface requirements, the PARALLAX-AT works with all ATARI® computers and all popular dot matrix printers. The PARALLAX-AT has an extra serial port to daisy chain other peripherals. It's easier to set up, has more printing modes, and a wider range of applications than any other printer interface on the market. PARALLAX-AT has a proven track record of being one of the most reliable printer interfaces available today.

## MICROBUFFER

MICRO MERICS MICROBUFFER lets you keep working while your printer keeps printing. Stationed between your printer interface and your printer it stores the output from your computer until the printer can finish printing. Available with 32K of memory, or, for larger jobs, 64K.

## MICROMODEM-AT

MICRO MERICS MICROMODEM-AT is a standard 300 baud modem that provides excellent performance for the ATARI computer user. It is designed to connect directly to any ATARI computer and to a standard modular phone cord. It uses the Bell 212A/103 protocol to allow connection to any Hayes or Bell standard modem, and features both auto-dial and auto-answer.

## MICROMODEM-1200

MICRO MERICS MICROMODEM-1200, is a full feature 300/1200 baud modem. MICROMODEM-1200 comes pre-cabled to directly connect to your ATARI or COMMODORE computer, or with an RS-232 cable to connect to APPLE®, IBM®, or other popular computers. MICROMODEM-1200 is fully compatible with the Hayes command set and uses the Bell 212A/103 protocol to connect with the most popular modems all over the world. MICROMODEM-1200 features 8 LED's to indicate High Speed, Carrier Detect, Receive Data, Modem Ready, Answer Mode, Off Hook, Send Data, and Terminal Ready. For ease of use you can reselect communication options through the MICROMODEM-1200's 8 outside accessible switches. A top of the line modem, at an amazingly affordable price, MICROMODEM-1200 is all the modem you need.

## PARALLAX-CD

MICRO MERICS PARALLAX-CD lets owners of all COMMODORE® home computers connect any letter quality or dot matrix parallel printer to their system. PARALLAX-CD emulates COMMODORE's own 1525 graphic printer when used with any other printer interface. All switches are externally accessible, and settings are clearly marked on the cover. PARALLAX-CD uses Compute Gazette mnemonics, and features 22 available print modes. It is simple to use, yet still allows the flexibility an expert programmer may need.

## MICROMODEM-CD

MICRO MERICS MICROMODEM-CD, like the AT, is a standard 300 baud modem, providing excellent performance and value for any COMMODORE computer user. It connects directly to a standard modular phone cord. It uses the Bell 212A/103 protocol to allow connection to any Hayes or Bell standard modem, and features both auto-dial and auto-answer.

## Micro Merics Corporation

## MACHINE SPECIFICS

Want to create a run-only file? Give this one a try: 32767 POKE PEEK (138)+256\*PEEK(139)+2,0:SAVE "D:FILENAME.EXT":NEW. Insert this line into your program (make sure you save a normal version of the program first), and then type GOTO 32767 (RETURN). The resulting file can be run normally, but not listed.

Need a random number between 0 and 255? Sneak a PEEK at memory location 53770.

Want to create a MEMSAVE file from BASIC so you don't lose your program when you go to DOS? All you need to do is type A=USR(5947) (RETURN). (Owners of XL series computers will need to hit RESET after the disk stops spinning.)

**Handy ST Tips.** Before our 16-bit friends start to feel neglected, let's move on to some ST tips.

Tired of looking at the label FLOPPY DISK on disk icons? Select a disk icon with a point and click, so that it darkens. Then move the pointer to the OPTIONS MENU, and select INSTALL DISK DRIVE. Type in a new name of your choice. Then select INSTALL. If you now save the desktop, the name change will be recorded permanently.

Wish you could start an application by double-clicking on a data file? Easy. Let's say you always boot ST-Writer, and then open files from there. Try this: On the desktop, click once on the application program icon (in this case, ST-Writer), so that it darkens. Now go to the OPTIONS MENU and select INSTALL APPLICATION. In the field called "Document Type," enter the three-character extender for the file type associated with the application.

In this case it might be .DOC, but you can do the same with Degas files (.PI1, .PI2, or .PI3), or any other application data files with similar extenders. Next, save the desktop to make this a permanent capability. You can now double-click on any document file and open automatically to that file under the application it calls. Just like that fruity computer with the tiny black-and-white screen! (Note: The application and the data files must reside on the same disk for this to work.)

Tired of needing to close and reopen a window when you switch disks? When you pop a disk out of any ST drive and then stick in another, you still see the directory for the old disk. Instead of closing and reopening the window, just tap the

ESCape key. The new directory will read automatically. ESCape will also clear text from dialog windows. For example, pressing the ESCape key in the date field on the control panel will clear the field and set the cursor at the beginning, so you can enter a new date.

Want to give your mouse a rest? No problem. Did you know that by holding down the ALTERNATE key and pressing the cursor arrow keys, you can move the pointer all around the screen eight pixels at a time? If you press SHIFT-ALT and the cursor keys, you can move one pixel at a time. With the ALTERNATE key held down, the INSERT key can act as the left mouse button, while the CLR/HOME key acts as the right mouse button. This can be handy when you want to move the pointer but don't want to take your hands off the keyboard.

JOHN J. ANDERSON can be reached on CompuServe (ID: 76703,654).

## COMMODORE

BY SHAY ADDAMS

Word processors are a boon for writers—unless you decide to write about them and have to sort through scores of programs. I've just done that, and here are my notes. *Superscript 128* (Progressive Peripherals and Software, Inc.; [303] 825-4144; \$79.95) may be the best for overworked writers because its macro capability lets you automate any series of keyboard actions and execute them by hitting a key. And the word processor may be integrated into memory with *Superbase 128* (\$99.95), so you have instant access to your data base. (Remember, with C 128 word processors, you'll need an RGB monitor to use fancy features like on-screen italics.)

For producing newsletters, *WordPro with Turbo Load and Save* (*WordPro 64*) or *WordPro 128 with Filepro* (Spinnaker; [617] 494-1220; \$39.95 each) prints double columns at a single swipe. Hasty keyboarders will like the Undo feature that restores the most recently deleted text. *Word Writer's* pull-down menus make it very easy to use on the 64 or 128. Both are GEOS compatible and include spell-checkers.

With window-based menus and a spell-checker, *Better Working Word Processor with Spell Checker* (Spinnaker; \$49.95) is also friendly. If

you're on a budget, look for *The Critic* (Quantum Leap; [619] 297-1078; \$19 for the 64, \$39 for the 128).

**PaperClip Elite.** *Fleet System 4*, for the 128 (Professional Software; [800] 343-4074; \$79.95) has a built-in dictionary, thesaurus, spell-checker, and data base; *Fleet System 3*, also for the 128 (\$69.95), does not include the data base. *Fleet System 2* (64/128; \$59.95) lacks the

thesaurus and data base.

*PaperClip Elite* (Batteries Included; [416] 881-9816) includes integrated communications software; the Amiga version has multiple windows, an outline processor, spell-checker, and the ability to mix graphics and text. There was no price set at press time. *PaperClip II* for the 128 (\$79.95) is a word processor with a spell-checker and telecommunications built-in.

Two other practical Amiga programs are *Scribble!*, version 2.0 (Micro-Systems Software, Inc.; [800] 327-8724; \$99.95), which supports cut-and-paste text for up to four windows to show many different files; and *Textcraft* (Commodore; \$99.95), which has built-in forms for memos, business letters, and so on. Check with your local Amiga dealer for packages.

**GEOS Update.** The packaging doesn't mention it, but *geoDex* and *DeskPack 1*—two new utilities from Berkeley Softworks ([415] 644-0890; \$39.95)—also give you a new GEOS desktop (version 1.3) (\$59.95), plus updated versions of *geoWrite* and *geoPaint*. Keyboard shortcuts are now permitted on the desktop and in *geoWrite*, which even lets you use the cursor keys to move around a document. Also included on the flip side of both programs are 15 new printer drivers, input drivers for the Koalapad, a light pen, Commodore's proportional mouse, and upgraded versions of the photo and text managers. (Some of these goodies may be downloaded from QuantumLink.)

COMPACT  
disc  
DIGITAL AUDIO

**We've built-in a wide range of choices.** You can select from a wide variety of current hits and classical favorites. Our great introductory offer lets you choose any 3 CDs listed in this ad for just \$1.00. Fill in and mail the application—we'll send you CDs and bill you for \$1. You simply agree to buy 2 more CDs (at regular Club prices) in the next year—and you may then cancel your membership anytime after doing so.

**How the Club works.** About every four weeks (13 times a year) you'll receive the Club's music magazine, which describes the Selection of the Month for your musical interest...plus many exciting alternates. In addition, up to six times a year, you may receive offers of Special Selections, usually at a discount off regular Club prices, for a total of up to 19 buying opportunities.

If you wish to receive the Selection of the Month, you need do nothing—it will be shipped automatically. If you prefer an alternate selection, or none at all, fill in the response card always provided and mail it by the date specified. You will always have at least 10 days in which to make your decision. If you ever receive any Selection

without having 10 days to decide, you may return it at our expense.

The CDs you order during your membership will be billed at regular Club prices, which currently are \$14.98 to \$15.98—plus shipping and handling, and sales tax where applicable. (Multiple-unit sets may be higher.) There will be special sales throughout your membership. After completing your enrollment agreement you may cancel membership at any time.

**Special Bonus Plan:** After you buy 2 CDs at regular Club prices, you can build your collection quickly with our money-saving bonus plan. It lets you buy one CD at half price for each CD you buy at regular Club prices.

**10-Day Free Trial:** We'll send details of the Club's operation with your introductory shipment. If you are not satisfied for any reason whatsoever, just return everything within 10 days and you will have no further obligation. So why not choose 3 CDs for \$1 right now?

**ADVANCE BONUS OFFER:** As a special offer to new members, take one additional Compact Disc right now and pay only \$6.95. It's a chance to get a fourth selection at a super low price!

CBS COMPACT DISC CLUB, 1400 N. Fruitridge  
P.O. Box 1129, Terre Haute, Indiana 47811-1129

Please accept my membership application under the terms outlined in this advertisement. Send me the 3 Compact Discs listed here and bill me only \$1.00 for all three. I agree to buy two more selections at regular Club prices in the coming year—and may cancel my membership at any time after doing so.

SEND ME THESE 3 CDS:

# MACHINE SPECIFICS

GeoWrite users should definitely get the new version.

GeoDex looks like an on-screen Rolodex and will print mailing lists and even auto-dial the phone number listed on a geoDex card. With geoWrite and geoMerge (on the same disk), you can print form letters with the geoDex data.

Three of Deskpack 1's accessories—a calendar, icon editor, and a blackjack game—are just novelties. But the Graphics Grabber vastly increases the graphic capability of geoWrite and geoPaint by enabling you to import graphics from The Print Shop, The Newsroom and PrintMaster. (Epyx has launched a line of Graphics Scrapbooks, each containing 100 images of clip-art compatible with The Print Shop and Printmaster. The first subjects are Sports and Off-the-Wall-Graphics.)

## Amiga Memory Expansion.

There are two new memory expansions for the Amiga: aMEGA and Alegra. The aMEGA Board (\$549.95) upgrades a 256K computer to 1 megabyte and comes with several useful utilities and an expansion port for extra boards, cards and other add-ons (C Ltd; [316] 267-6321). Or you can get a 512K memory boost with the slim Alegra, which goes for \$379 and can be upgraded to 2 megabytes (Access Associates; [408] 727-8520).

**Q:** What's the best color printer for use with a 64? Are any laser printers compatible with it?

**A:** The Okimate 20 is the most convenient color printer, since many programs already have drivers for it. But GEOS has printer drivers for the Apple Imagewriter II or the Epson JX-80. With GEOS software, you can also use laser printers from Apple, Hewlett Packard, or Okidata.

SHAY ADDAMS can be reached on Compu-Serve (ID: 72267.601) or QuantumLink (ID: JB CHALMER).

## IBM/MS-DOS

BY HENRY BEECHHOLD

Did you know that a two-hour videotape can store 80 megabytes of computer data? So why let your VCR sit around most of the day doing nothing? The Videotrax tape backup system will dump your data in either VHS or Beta format. Backups made this way can be run from any com-

patible VCR. You cannot play the videotape, however; you must load the data back into the computer first. The cost is \$595 for the controller card, and \$1,395 for the controller card and VCR (manufactured by Alpha Micro; distributed by Priority One Electronics, 21622 Plummer St., Chatsworth, CA 91311; [800] 423-5922).

**CGA Colors.** A reader asked, "Why do game and other graphics-oriented programs fail to use more than four of the 16 available PC colors?" The fact is that a color/graphics adapter like the standard IBM Color Graphics Adapter (CGA) can handle only so much information. Color and graphics both demand lots of memory. The higher the resolution, the fewer colors can be shown with a given amount of memory. The CGA board can display four colors in medium resolution and 16 colors in low resolution. The Enhanced Graphics Adapter can display 16 colors in high resolution, but right now few game programs are written to work with the EGA adapter.

**Prompt Attention.** You're not necessarily stuck with that tired old MS-DOS screen prompt (>). With a color monitor, you can have a prompt that tells you what directory you're in—and does so in a different color than the text. (I'm partial to a cyan prompt and yellow-on-black text.) To do so, you must have the line DEVICE = ANSI.SYS in your CONFIG.SYS file.

For automatic installation of your custom prompt every time you boot up, you need to create an AUTOEXEC.BAT file or add the necessary information to the existing one.

You can create the file with any text editor or word processor, or with the COPY command, as follows: (Note: press ENTER after each line):

```
COPY CON AUTOEXEC.BAT
ECHO OFF
PROMPT SE[36;40MSP $G$GSGSE[33;40M
(Press CONTROL-Z or Function Key
6. Then press RETURN.)
```

The first line creates the file; ECHO OFF keeps DOS from printing the file on the screen while it's being run; CONTROL-Z marks the end of the file.

Here's what the numbers mean: 40 is black, 36 is cyan, and 33 is yellow (see your manual). The \$p \$q \$s \$g sequence results in an arrow prompt

that indicates the present drive and directory path in this fashion:

C:\WP\MYFILES ==>

Other prompt commands include SB (vertical bar), SD (date), SL (<). You can even include text if you wish, such as WHAT IS YOUR COMMAND MASTER? To return the prompt to its plain dull self, type PROMPT any time you are in DOS.

**Fancy Printing Cheap.** To really take advantage of your printer—at a modest cost—try PowerText Formatter (\$89.95, plus \$5 for shipping and handling). The program works with any ASCII-producing text editor and can, with relatively little tinkering on your part, produce handsome multicolumn newsletters, scripts and screenplays, customized form letters (using the built-in merge-printing routine), reports, memos, academic papers, and whatnot.

The program, which supports ordinary printers as well as lasers, makes tables of content, indices, and footnotes. The results with a laser printer are most impressive. Use the formatting files (templates) provided or use your own (Beaman Porter, Inc., 417 Halstead Ave., Harrison, NY 10528; [914] 835-3156).

**Sick Computer?** If you have access to a working PC while yours is on the blink, you might be able to diagnose and even cure your problem with ServTech, a program that tracks down the source of hardware malfunctions. It interprets system diagnostic messages, and through a series of questions helps you isolate the probable causes of trouble (Rylos Technologies; 10213 Heron Pond Terrace, Burke, VA 22015; \$44.94).

HENRY F. BEECHHOLD is author of The Brady Guide to Microcomputer Troubleshooting & Maintenance (Simon & Schuster, \$17.95).

## TANDY

BY STEVEN MILLER

Bob Rosen's Spectrum Projects, in Howard Beach, New York, specializes in products for the Color Computer. He recently sent a note—almost before the CoCo 3's were on the market—with some tips on using the new machine's extended BASIC commands. Here they are: 1) To use a monochrome monitor, type WIDTH 40: PALETTE 8,255: PALETTE 0,0:CLS9. 2) To get true lowercase in the 32 x 16

# ARMY RESERVE OFFICERS' TRAINING CORPS

There's a college course that's helping Rob Bright succeed in his other courses. The Army Reserve Officers' Training Corps.

Army ROTC is the college elective that teaches the planning and time-management skills you can put to use right now. As well as the confidence and leadership you'll need to succeed in your future career.

Enroll in Army ROTC as you would for any college course. There's no commitment to join the Army. And Army ROTC won't take up a great deal of your time. But you can learn how to make the most of your time. And, more important, your potential.

Find out why more than 60,000 college students were enrolled in Army ROTC last year. Write Army ROTC, Dept. ZS, P.O. Box 9000, Clifton, NJ 07015-9974.

Be all you can be.

**“My grade point average jumped from a 2.6 to a 3.4 since Army ROTC showed me how to make the most of my time.”**

Robert Bright, Junior  
University of Idaho

## MACHINE SPECIFICS

mode, type POKE & H95C9, & H7H:POKE & HFF22, & H10. 3) To get the inverted screen mode, do an additional POKE & HFF22, & H20. 4) Finally, for a real surprise, hold down the ALT and CTRL during power up! (I'll tell you non-CoCo owners what the surprise is next month.)

**Display's the Thing.** Tandy sells several monitors that take advantage of the CGA (color/graphics adapter) standard in MS-DOS machines—the CM-5 and CM-10. Tandy is now moving up to the EGA standard with the new EGM-1 monitor.

While I can't see all families spending the kind of money (nearly \$1,000 for the monitor and the EGA card to power it) necessary to get the EGA's high-resolution color displays, it sure is nice to see crisp, clear, colorful words and sharp graphics on the monitor. Heavy users should consider this enticing upgrade.

**New CoCo 3 Software.** Shortly after receiving these tips, I got the first of Spectrum Projects' new CoCo 3 software. In fact, it was the first third-party CoCo 3 software I had seen. *CIII Graphics* is a drawing program that takes advantage of the new colors available on the CoCo 3. It's a fairly sophisticated program, yet simple to use, with joystick control and self-generating standard shapes (circles and squares).

I didn't get very good results because my artistic ability is nil, but my son whipped up a nice picture of the solar system in about five minutes. *CIII Graphics* sells for \$19.95, plus \$3 shipping and handling.

The second Spectrum item we received is more useful to all CoCo 3 owners interested in doing their own programming. It's a booklet called *CoCo 3 Secrets Revealed*. While the folks at Tandy might disagree with Rosen's version of the history of the Color Computer, it was fascinating to see how someone who obviously loves the CoCo views its development.

Even if you don't care anything about the life story of the Color Computer, the book has plenty of tips about using it. "Secrets" should make a nice addition to the extended BASIC book that is supplied by Tandy. *CoCo 3 Secrets Revealed* supplies the why as well as the how of using the CoCo 3. The booklet is a bit expensive (\$16.95 plus \$3 shipping and handling) for 30-odd pages of information packaged not much

better than your average typewritten newsletter. But you're paying for the information, not the packaging. Incidentally, *CIII Graphics* and "Secrets" can be purchased together for \$29.95. For more information about Spectrum Projects' products, write to P.O. Box 264, Howard Beach, New York 11414; (718) 835-1344.

**Cable Confusion.** Several Tandy 1000 owners have written to ask about the unusual shielded printer cables supplied with their computers. Tandy advises that you use them—and not standard IBM-type cables. The concern from some owners is that if you plug in a standard cable, the computer will be damaged. Tandy assures me that no such thing will happen. The reason they are furnishing the shielded cables is to conform to FCC regulations on interference with other electrical devices.

Next month, I'll take a look at more new software for the CoCo 3.

STEVE MILLER is a freelance writer and computer consultant.

## ORPHANS

BY PATRICK SPERA

What is a Tlcoff? It's the Texas Instrument Computer Owners Fun Fair, scheduled for March 28, 1987. It will run from 10 a.m. to 6 p.m. at Roselle Park High School, Roselle Park, New Jersey. The proceeds from the fair will benefit the Student Council Scholarship Fund.

In addition to displays, seminars, and a flea market, there will be a demonstration of the new TI 99/4A compatible, Myarc Gen'ev. At the time of this writing, it's still in pre-production. Keep your eyes glued to this page in months ahead and I'll try to keep you up-to-date on this machine.

For more information on Tlcoff, please contact one of the following people or groups. On CompuServe, leave an Easyplex to Tlcoff (ID: 73547,2014) or leave a message on TI-FORUM. GENIE users can leave e-mail to TICOFF. You may also call the following telephone numbers: Central Westchester 99'ers, (914) 528-5402; Long Island 99'ers, (516) 938-1095; NEWJUG users, (201) 686-5619; New Jersey 99'ers, (201) 838-7637.

**Timex/Sinclair Disk Drives.**

One major thing that has driven Timex Sinclair owners crazy is a lack of disk drives. There is nothing more disheartening than to see a six-minute tapeload fail. Wouldn't it be grand to have a disk so you could see the load fail in seconds instead?

All kidding aside, you might want to consider the Aerco Disk Interface (FD-68) (Box 18093, Austin, TX 78760; [512] 451-5874). The TS 2068 version comes with the disk interface, an RGB interface, 64K of RAM (expandable to 256K with some rewiring), one disk drive, and a case and power supply (\$377). For \$25 more, you can purchase a user license for RPM, which is a CP/M upgrade.

RPM will run CP/M 2.2, which is the gateway to thousands of programs for Timex users. The RPM system disk is also crammed with utilities, so you will have a ready-to-use system. With the many CP/M users' groups around the country, a lack of programs might never be a complaint again.

An Aerco disk interface (FD-ZX) and drive is also available for the TS 1000/1500 (\$360), but it does not include the extra memory or RGB interface.

**Adam Disk Drives.** Adam users are lucky that Coleco released a disk drive for the Adam, which was originally sold with digital tape drives. The bad news is that the supply of disk drives is starting to dry up. But some retail stores on the East Coast still have them in stock, as do several Adam mail-order houses. Call the following dealers to find out which ones still have drives in stock: NIAD, (312) 961-3529; M.W. Ruth Co., (609) 667-2526; Alpha-One LTD, (718) 336-7612. Don't forget to tell them where you got their name! Yeah, it's a cheap plug, I admit.

But what if you already have the Adam disk drive and it's acting up? Or you'd like to store more on every disk? Enter EVE Electronic Systems (320 Union St., Millis, MA 02054; [617] 376-4919). EVE repairs disk drives and will upgrade them. EVE pulls the guts from your current system and installs a double-sided drive in its place. This boosts your original 160K storage to 320K. (If you use CP/M 2.2, you can only access 270K.) The cost of this modification is \$150.

PATRICK SPERA can be reached on Compu-Serve (ID: 76703.4350).

# Still Searching?

MAC Version

now  
available

What does the Bible say? And where?

We offer an integrated family of software products that allow you to search the Bible as never before.

With "THE WORD Processor" software (which includes the complete text of the KJV or NIV Bible) you can create indexes on key words, phrases, even concepts, as well as search, display or print, for just \$199.95. Greek and Hebrew Transliterator products which include Strong's Concordance are also available. Or choose from a host of other exciting Biblical software products available in varying price ranges.

So if you're still searching, give us a call. We're anxious to show you how your PC can help you access your Bible as never before.

For IBM™ XT/AT and Compatibles

### THE™ MULTI I/O

100% AST™ I/O+ compatible w/serial, parallel and game ports standard, clock/calendar, RAMdisk and Print Spooler. Second Serial Port optional. Retail Price \$75.00

**\$60.00\***

### THE™ 2MB EMS RAM CARD

Meets Lotus™/Intel™ specs, compatible with Microsoft™ Windows, Lotus, Framework and more. RAMdisk/Print Spooler, software included, w/OK. Retail Price \$172.00

**\$99.00\***

### THE™ MULTI 384

100% AST™ SixPack compatible. Features 0-384K additional memory, serial and parallel ports, clock/calendar w/battery backup, RAMdisk and Print Spooler, w/OK. Retail Price \$90.00

**\$67.00\***

## STORAGE DEVICES

For the IBM™ XT/AT and Compatibles

### THE™ 20MB HARD DISK SUBSYSTEM

This half height internal 20MB disk drive comes with a short slot controller card, connecting cables and manual.

Retail  
Price  
\$458.75

**\$347.00\***

### THE™ 20 + 20 SUBSYSTEM

The 20MB streaming tape drive packaged together with our 20MB Hard Disk allows you to backup the entire contents of your 20MB hard disk in minutes.

Retail  
Price  
\$980.00

**\$699.00\***

### THE™ 20MB HARD DISK ON A CARD

This 3.5" 20MB hard disk and controller on a single card features simple plug-in and go installation and disk slot saving efficiency.

Retail  
Price  
\$500.00

**\$375.00\***

**PC**  
MAGAZINE

"THE™ PC + is well built and has enough company support behind it to make it a very attractive alternative to higher priced competition."

## Computer Dealer

"...the unit became the preferred computer in our office, which has several name brands as possible alternatives..."

THE™ PC + COMPUTER is compatible with all business, professional and personal software written for the IBM™ PC. It will also enhance your productivity with its ability to switch to an 8 megahertz clock rate, enabling you to run your software twice as fast as the IBM™ PC. THE™ PC + also comes standard with an "AT" style keyboard, correcting the inefficiencies found by IBM™ on their regular PC keyboard. 256K standard (640K optional) on the mother board will allow you to run memory intensive programs such as Lotus 1-2-3, dBase III and Framework without adding extra memory cards. Plenty of power, with a 150 Watt source and lots of room for expansion with 8 card slots, is also standard. Base unit includes:

256K RAM,  
Computer with One  
360K 5¼" Floppy  
Drive, Dual Turbo  
Clock Speed, 8  
Expansion Slots,  
150 Watt Power  
Supply, "AT" Style  
Keyboard.

## Affordable, Compatible, and Full-Color Capable!

Besides being the one printer for all the PC's pictured above, the OKIMATE® 20 is also the one for all your printing needs.

Want to spruce up your homework with colorful charts and graphs? The OKIMATE 20 is for you.

Need crisp "Near Letter Quality" printing for business correspondence?

The OKIMATE 20 is for you.

Maybe you want expanded or fine print, italics, underlining, superscripts, or subscripts? You guessed it, the OKIMATE 20 is for you, too.

In fact, no matter what you have in your PC, you can put it on paper with the OKIMATE 20.

With this versatile printer you

also get such high-end features as built-in type fonts, a 24-element printhead and the ability to make transparencies for overheads.

All at a very low-end price: \$268\* complete with "Plug 'n Print" personality module.

For the name of the OKIMATE 20 retailer nearest you, simply call 1-800-OKIDATA.

\*Suggested retail price. Dealer price may vary.

# BUYER'S GUIDE TO IBM PC COMPATIBLE COMPUTERS

**P**lunging prices on IBM PC-compatible computers have brought droves of new buyers into the market. Many want PC compatibles to do business at home; others feel safe buying what is considered an industry "standard"; still others can't resist the low prices.

If you're shopping for an IBM PC-compatible computer in the current market, you're probably pretty confused. You could, of course, take the easy way out and buy an IBM. Depending on your needs and your finances, it might be the right way. But beyond that, you can shop for IBM compatibles in three main categories: low-cost no names; mid-priced brand names; premium-priced brand names.

Figuring out where to shop can be as complex as taking a personality test. So on the following pages, we can help you with the difficult decisions by describing each category and its advantages and disadvantages.

## LOW-COST NO NAMES

"No-name IBM clone"—what does this mean? Strictly speaking, a clone of anything is literally a duplicate. Since the law looks with disfavor on literal copies of commercial products, there are no *true* IBM clones on the open market. There are, however, a lot of computers that resemble IBM computers and that duplicate their behavior well enough for the manufacturers to claim IBM compatibility. Thus, the owner of such a compatible can expect the machine to run software that requires an "IBM or true compatible," and to use much of the add-on hardware designed for the IBM PC.

"No name" means the brand name is virtually unknown—as opposed to such well-known names as IBM, Zenith, AT&T, Compaq, Tandy, and others. Because IBM-compatible computers have become somewhat of a commodity to manufacture, many of the unknowns are just as good as those made by IBM and other familiar companies. Almost always, they offer many more features and power for the dollar.

And some of the no-name manufacturers are making a small name for themselves within the computer industry. PC Limited and PC Network have been in business for several years. Wells-American is a relative newcomer to the PC marketplace, but an old company. Blue Chip, which used to market printers, now sells computers manufactured by Hyundai, the Korean car manufacturer.

### CONSUMER CONCERNS

Because many no-name computers have obscure pedigrees and are commonly sold by mail- and telephone-order only, potential purchasers are often wary. And indeed, two big problems could arise. The first is lack of quality. Let's be honest: There's plenty of junk out there. If the price is surprisingly low, the equipment may prove unsurprisingly bad. Most no name compatibles are sold by assemblers, not manufacturers. A particular Brand X machine may be splendid, but the next Brand X assembled may consist of completely different components.

The second potential problem is lack of dealer reliability. You send your dollars into the void, and the dealer goes out of business. Or the dealer is simply an order taker who shrugs when you tell him your troubles.

For these reasons, those who have the best chance of success buying a no-name computer are those who are most knowledgeable about computers. What may be minor difficulties for experienced users could be major problems for neophytes.

### PRICE

Brand X IBM PC compatibles are priced from about \$400 to about \$1,000, depending on the degree to which the computer is "stuffed." For \$400, however, you don't get a full working system. You'll probably have to add a video display board and a monitor before you can even use the system. The beauty of buying an open system is that you can stuff it yourself with components suited to your needs, such as a hard-disk drive or an enhanced color graphics adapter.

The \$1,000 model is likely to include 640K, two disk drives, a monochrome monitor and display card, and parallel and serial ports. That's a very good deal—assuming the computer works well, has a decent keyboard, and won't fall apart.

How can you tell that? To some extent, it depends on how you buy the computer and whether or not you can see and touch it before you buy it.

### WHERE TO BUY

Nowadays, no-name compatibles are sold through virtually every merchandising channel, except franchised computer retail chains. Discount chain stores such as K-Mart, Target, and Caldor stock Blue Chip computers. Local computer stores sell PC compatibles with the store's own name on them, known as "house brands." There are mail-order houses (such as PC Limited) and hybrid mail-order and retail vendors (such as Computer Age). Obviously, the ideal place to buy a no-name computer is at a local retail outlet, where you can try out the computer, check the video display, and feel the keyboard.

If you buy through the mail, you should at least talk to someone who has dealt with the mail-order firm before, and preferably see the computer itself. When you talk to a vendor, ask several questions. What does the warranty cover? Can it be extended? At what cost? What is the return policy on damaged goods? (Some dealers charge a "restocking fee," even if the damage is their fault.) Check the repair policy—is it in-house, out-of-house, or nonexistent? Do the components have FCC Class B certification?

When you order, get the name of the order taker, an order number, and a definite delivery date. Let the vendor know that you do not want to be charged until the day of shipment. Some vendors will charge your credit-card account long before they ship the merchandise.

### WHO SHOULD BUY?

Unless you stumble across an irresistible deal, the no-name category is best left to the sophisticated buyer. Typically, someone who has used computers for several years (especially those familiar with the way an IBM PC works) will buy a no-name computer as a second computer. Alternatively, a home-business or small-business owner will buy several no-name computers to use as workhorses.

If you hit it right with a no-name, you save a lot of money; if you miss, you may cause yourself a lot of aggravation.

—HENRY BEECHHOLD

## MID-PRICED BRAND NAMES

In December 1984, Tandy introduced its Tandy 1000. It was the company's first MS-DOS computer, and it sold for \$1,299. That was a breakthrough price, and it started the whole downward spiral that continues to this day.

Price is a tricky issue in evaluating computers, and IBM compatibles are even trickier than most computers because they can be sold in so many different configurations. Advertisements for computers rarely include outright lies, but their "sins of omission" can be misleading.

But Tandy and—right on their heels—Leading Edge, the first companies with brand-name identities that began selling IBM compatibles at consumer-level prices, put an end to this chicanery. Their computers work when you take them out of the box and plug them in, plus they have the basic connections (parallel and serial ports) needed for a printer and modem.

This packaging strategy clearly has price advantages for the consumer, since it is cheaper for the factory to install the required components while building the machine than for buyers to purchase individual cards and plug them in themselves. It also makes buying a computer a lot simpler. Nobody has yet figured out a way to make an IBM-compatible computer as easy to operate as a household appliance, but at least if you go shopping for a toaster you don't have to worry that the heating elements will be sold separately.

At the same time, price is becoming less of an issue

with each passing week. From the low-end to the high-end, the prices are all moving in the same direction—steadily downward—and in the process the gap is narrowing among categories. As price differences become less significant, what other factors should you consider?

### EQUIPMENT FEATURES

When you want to expand the capabilities of your IBM-compatible computer, you generally add a card—a printed circuit board (with electronic components installed) that fits into a slot in your computer. In theory, the more slots your computer has, the more expansion potential you have. But there's more to it than simply the number of slots. You also have to consider how many slots will be taken up by basic equipment, like a display adapter.

When the manufacturer builds these basics into the system unit, it leaves more slots free for later expansion. The Leading Edge Model "D", for example, comes with both monochrome and color display adapters built in and room for 768K memory on the motherboard. (Some computers require a circuit board in one of the slots.) This leaves more free slots open for future system expansion. In a 768K system with two floppy disk drives and a monitor installed, the Leading Edge will have four open slots.

Another important consideration when choosing a computer is the keyboard. Layouts vary somewhat, but all the compatibles provide the full set of keys you need. The feel of each keyboard brand varies widely, though, and that's important. To some degree the choice is a matter of personal preference, but some low-cost compatibles come with keyboards that feel so "mushy" that nobody would find them desirable. With mid-priced and high-priced compatibles, you can probably try out the keyboard at a retail store; that's usually not true with the lower-priced computers, which are often sold by mail order only.

The same holds for the screen display, which also varies widely in quality. And keep an ear out for the decibel level of the cooling fan. The Leading Edge fan, for instance, is loud. It's not something you're likely to pay attention to in a store, but you should. You'll be hearing a lot of that noise in the months ahead.

### SOFTWARE INCLUDED?

One piece of software that is an absolute necessity and is included with the purchase of the mid-priced brands, is MS-DOS. This operating system-on-a-disk costs about \$90 at retail outlets. Again, lower-priced and higher-priced computers are often sold without MS-DOS. The BASIC programming language is also included with most mid-priced machines at no extra charge. In addition, many of these computers come with valuable applications software at no additional expense.

### WARRANTY AND SERVICE

A long warranty from a company likely to be around long enough to honor it is a very significant consideration. IBM and several of its corporate-level competitors sell computers with 90-day warranties. While Tandy is also in the 90-day category, other manufacturers in the mid-price range offer a full year's coverage, with Leading Edge extending their warranty to 15 months.

Several mail-order companies have recently extended the warranty coverage on their "house-brand" PCs as well. However, it's considerably easier to carry your wounded computer into a local dealer and explain the problem face-to-face than to pack it up and ship it off to a mail-order firm for service.

## WHAT YOU NEED TO USE AN IBM PC COMPATIBLE

Buying an IBM PC-compatible computer can be tricky because the system unit can be sold bare bones or loaded. So you have to know what you need to make the right purchase decision. Otherwise, you may come home and find you need several more pieces of equipment to make the machine run.

Besides the system unit and keyboard, here's the minimum configuration you need: 256K memory, one disk drive, a disk controller, a monochrome monitor, and a monochrome adapter. To use a printer, you need a parallel port.

Ideally, you want two disk drives and 512K or 640K of memory. That configuration will allow you to run more high-powered software more easily. Also, with some systems you can add memory directly to the motherboard; on others, you need to use an expansion card and take up a valuable expansion slot.

**Video Display.** Subtleties about the video displays on IBM compatibles will affect your ability to run certain programs. There are four main types of video adapters: monochrome text, monochrome graphics, color graphics, and enhanced color graphics.

For straight text and/or numbers work, all you need is the text adapter; but if you want to use software that generates graphics or charts, you'll need either the monochrome or color graphics adapter. Most games and educational programs require the color graphics adapter and a color monitor. Only advanced graphics/charting programs and desktop-publishing programs require the enhanced graphics adapter. And then you also need a monitor that can display the enhanced colors!

Even if you buy a computer with built-in monochrome and color graphics adapters, you won't be able to run most color software unless you have a color monitor (or a special monochrome monitor). By contrast, on the Commodore 64, Apple II, and Atari XE, you can run color software on a monochrome monitor.

**Power Supply.** Most IBM-compatibles can be bought with one floppy disk drive and one hard-disk drive; alternatively, you can add a hard-disk drive later. However, to do so, you should have at least a 130-watt power supply.

**Speed.** While the stock IBM PC includes a microprocessor that runs at 4.77 MHz, several of the compatibles use processors running between 6 and 8 MHz. The extra speed is a potential advantage, especially if you work with large files, as long as it is easy to switch from the higher to the lower speed. If not, you may find compatibility problems with certain software and hardware combinations.

—NICK SULLIVAN

### COMPATIBILITY

Compatibility was once a hot topic in selecting a PC, and there are still a few isolated spots where you might run into trouble. However, with the mid-priced machines listed here, virtually any program that runs on an IBM PC will run (except for a handful of educational programs written in BASIC).

In addition, manufacturers of graphic cards, peripheral devices, and other hardware add-ons will go out of their way to make sure their products work with major-brand compatibles. Hardware compatibility is still not foolproof, but you can be sure that while every add-on may not work with every compatible, there is hardware readily available to expand any of the systems listed here. For instance, the Tandy 1000 EX and Epson Equity I require boards from Tandy and Epson, respectively, but both companies offer a wide range.

### WHO SHOULD BUY

The mid-priced brand-name compatibles blend reasonable price with high-quality construction and good service. The size of the companies makes reliability and support less of a problem than it is for a no-name clone. Because the computers are distributed through retail

<sup>1</sup>Memory can be expanded to 640K or more. <sup>2</sup>Game (G), Parallel (P), and Serial (S). <sup>3</sup>Some slots may be taken up with interfaces and video adapters.

stores, you can take the computer out for a "test drive" before buying it. If you want an inexpensive MS-DOS machine but can't afford to take a chance on what might prove to be a "disposable" computer, the brands in this category are solid choices.

## PREMIUM-PRICED BRAND NAMES

When the IBM PC was introduced in 1981, the barebones system (with 48K and one disk drive) cost over \$2,000. Everything else was extra—a monitor, PC-DOS, more memory, the works. A complete system was a very expensive proposition at the time (and certainly by current standards), and was bought primarily by large companies or people who ran small businesses.

Because the IBM PC sold so well, other manufacturers jumped into the fray. Compaq was the first company to successfully market an IBM compatible because its portable was the first computer that was virtually 100 percent compatible and it cost considerably less than an IBM PC. Compaq also sold primarily to people in business.

AT&T, Zenith, ITT, and others started making IBM-compatible computers to sell to other big companies. In 1986, the national ComputerLand chain began offering its own computer system, which begins as a virtual "empty box" and allows users to pick and choose components for a custom system.

As PCs become more of a commodity and prices collapse, the range between a machine built by IBM and a no-name clone is narrowing daily. Turning to more profitable markets, high-end manufacturers have turned their sights to AT-compatible computers and the next generation "386" machines that use Intel's 80386 microprocessor. Trade sources report that IBM is coming out with new PCs for the home and school markets with high-resolution color displays that will give them a momentary edge over compatibles.

## PRICE

Though high-end IBM compatibles are still considerably more expensive than the clones, you can find deals here and there. For instance, 47th St. Computer in New York City, one of the country's largest mail-order vendors, was recently selling an AT&T 6300 with a color monitor and two disk drives for \$1,599, considerably lower than its official list price.

However, if you are shopping for a machine in this category, be advised that the advertised price often doesn't include integral pieces. For instance, IBM PCs are usually sold without a display adapter, so you can't connect a monitor. And sometimes they are sold without a floppy drive controller. By the time you assemble a working system, the price has soared.

Also, you should know that you're not necessarily getting different components than you would from a no-name clone maker. The box may say IBM or AT&T, but dealers often use boards and disk drives from other manufacturers. Many so-called IBM PCs sold today use many of the same parts you'll find in lower-cost compatibles. There is nothing intrinsically wrong with this, especially since you are assured of good service in case of trouble. But, paying top dollar doesn't necessarily mean you're getting a better machine.

The main payback when buying a premium-priced IBM compatible is assurance that all third-party add-ons will work with it. Manufacturers of graphics boards, memory expansion, modems, etc., will make sure that their products run on the big-name computers first. While the compatibility question is pretty unimportant today for

## PC? XT? AT?

IBM personal computers come in three basic flavors (and many variations), as do compatibles, and it's important to understand the difference when you go shopping. In this article and in the accompanying chart, we've concentrated on PCs and XTs, though most manufacturers also sell high-end AT versions. At press time, trade sources are saying that IBM is planning a new version of its PC, with high-resolution color graphics and other new features. However, in this article we are discussing only the "old-fashioned" PC.

The basic IBM PC and the XT use the same microprocessor (the Intel 8088) and the same software. There are two key differences—the XT has more expansion slots (eight versus five), and has a larger power supply (130 watts versus 63.5 watts) to accommodate a hard disk. Nowadays, almost all compatibles are more like an XT than a PC.

In the past, XTs were usually sold with a hard-disk drive installed, but that's not always the case now. At the same time, many compatibles that include a larger power supply do not have the XT designation on their name. Look at the product specs carefully to understand what you're getting.

The IBM PC/AT has a different microprocessor (the Intel 80286), which is compatible with the earlier chip but runs at a higher speed and is more powerful. While this is desirable for number-crunching applications, there is still very little software that requires an AT to run. In addition, the AT is sold with a high-capacity floppy disk (1.2 megabytes of storage), and often with a 30-megabyte hard-disk drive. All around, it's designed for large-scale business tasks.

Finally, IBM recently introduced a cross between the XT and AT called the XT/286. It's an XT that uses the faster 80286 microprocessor.

run-of-the-mill software and hardware, more specialized applications sometimes cause problems.

Another consideration in terms of compatibility is the instruction provided for installing various hardware devices. You can rest assured that any add-on board or disk drive you purchase will come with directions for installing them in an IBM PC, but for compatibles you may be left to your own devices.

## WARRANTY AND SERVICE

When you pay top dollar, you can be assured of getting a well-built workhorse. The keyboards are sturdy and the system units solid. You can anticipate fewer potential problems than with a no-name clone. In addition, many dealers sell service contracts for the high-end computers and will replace them with other machines when repairs are being made. Thus, if you can't afford to be without a computer for any length of time, you may want to pay a little extra for security.

Many outfits that provide on-site or carry-in service won't touch a clone, but they are happy to work on IBMs, even if they have non-IBM boards in them.

## WHO SHOULD BUY

Buying a corporate-level compatible is advantageous, primarily on two counts—compatibility and serviceability. The compatibility issue is largely a question of your expected use of the machine, since only fairly esoteric peripherals will fail to run on lower-cost compatibles. The service question is more a matter of availability than of quality. It is not the case that IBM or Compaq does a better job of servicing their machines; rather, anyone who fixes PCs will have the parts and the information needed to do the job.

The premium-priced category makes sense for heavy business users who need quick service in case of breakdowns, or people who don't care to spend the time trekking through the swampy jungle of Brand Xs, Ys, and Zs.

—STEVE MORGENSTERN

# Which Computers Make the Best Word Processors?

ILLUSTRATION BY DARRYL LICASAN

## RATING THE MOST POPULAR MACHINES **BY DAVID HALLERMAN**

I should have known better. All the danger signals were clear. As Graeme W. McRae, an IBM PC user from Monmouth Junction, New Jersey, cautioned, "You've asked a question similar to 'What's your religion?' and 'Why is it better than the other guy's religion?'" Even though his words alerted me to the potential for strife, I went on. I was determined to try to rate different computers as word processors.

### CHOOSING A COMPUTER FOR WRITING

What if you're figuring out which computer to buy for word processing? It's not an easy decision; I've seen friends agonize for two or three years about which machine to get. Even those convinced that a computer is a better tool for writing than a pen or a typewriter often share the attitude stated by one computer user I correspond with: "Most computers seem roughly equal for writing; it's the software that varies."

While there's truth in that statement, it doesn't go far enough. Of course, without good software for word pro-

cessing, even the most sophisticated computer is not much of a writing tool. Yet a computer's hardware and operating system can either help or hinder the potential ease of word processing.

### HOW THESE COMPUTER RATINGS WERE DETERMINED

In comparing computers for word processing, we'll refer to a "basic system," which is defined for this article as the computer, a monochrome monitor (generally better for word processing than color), and one drive (or two drives when that configuration is more common, as with an IBM PC or compatible). While a printer is certainly needed to complete a writing system, it is not included in our basic comparisons since its cost can vary so greatly, anywhere from about \$100 to thousands of dollars.

As we rate these popular computer systems, you'll find grades of Good, Very Good, and, potentially, Excellent. To rate no computer as less than good for word processing is confirmed by experience. After a short time working with one, people tend to feel that any computer is better for writing than none. As Jim Jordan, of Bay Shore, New

DAVID HALLERMAN is reviews editor for FAMILY COMPUTING.

York, observed, "Whenever I'm tempted to curse at the computer, I just think back to the days when I had to write with a typewriter (or, heaven forbid, pencil and paper!), and use white-out, and get extra copies with carbon paper or copying machines. Anything is better than that!"

## WHAT MAKES A GOOD WRITING TOOL?

Keep the following attributes in mind when shopping for a computer that will be used mainly for writing.

**Memory.** The amount of memory in a computer (RAM) helps determine several factors. For example, the more memory, the larger your documents can be. For some people, 64K is enough RAM, giving you space for about 10 to 15 pages (maximum)—but there are reasons to want more. More RAM means the computer has room for both lengthy text and the word-processing program itself. Greater amounts of memory accommodate word processors with extra features and that are easier to use. Speed of operation is another factor largely determined by memory; while not all programs load entirely into memory (even when there's plenty), those that *do* run more rapidly than those that have to read the disk drive periodically. Finally, if you want to use a spell-checker or a thesaurus while you're typing rather than after you're finished, greater memory helps make that possible. How much memory is enough? As much as you can afford and as much as your computer and software can use. A minimum of 128K RAM is a good starting point for many writers.

**80-column display.** There's no question that an 80-column display is better for writing than only 40. Why limit your view, especially when you're writing? That's why computers that offer only 40 characters per line of text are not prime candidates for word processing, except for those who prefer larger letters that are easier to read. (Unless otherwise noted, all the computers rated offer 80 columns.)

**The keyboard.** Since the keyboard is your main way of telling the computer what to do, all writers should be sure they like the way it feels, which is subjective. You also might want to consider computers with keyboards that have a number of function keys. These keys can make certain word-processing functions operate in a single keystroke. Here's still another keyboard consideration: Touch typists have taught their fingers to get used to certain keys in particular positions. If you have a tough time adopting new habits, a keyboard that doesn't violate this standard layout makes most sense.

**Value.** A low price is not the same as a good value. For example, it probably makes less sense for you to spend about \$400 for a system with writing limitations (such as the C 64, with only 64K of memory and a 40-column display) than it does to increase your costs by 50 percent and spend \$600 for a 512K Atari ST. (For the purposes of this article, we're assuming that the bulk of your time will be spent writing.) Is it a good value to purchase an IBM PC system for \$1,250 when a no-name IBM PC clone is priced at \$750? Maybe, if part of the extra cost means a better keyboard or support when you need it. (NOTE: All prices quoted in this story are based on recent print advertisements.)

**Efficiency and ease of use.** A computer's disk operating system (DOS) affects everything you do with that computer. At its best, a computer does not make you think about the mechanism that's taking down the words; it simply lets you write. But some operating systems, like Commodore DOS or MS-DOS, are especially hard to learn and

operate and can interfere with the flow of writing. Contrast MS-DOS machines, say, to the relative ease of the Macintosh, Amiga, and Atari ST, which use a mouse to manipulate the computer screen and familiar icons to represent functions. But be aware of the trade-off. Even some people who *like* one of those three computers may not like "mousing" around when writing. But many others love (or at least are not bothered by) a mouse, so try one out before buying one of these mouse-based machines.

**Printer support.** Some types of computers restrict your choice of compatible printers more than others. For instance, the C 64 and C 128 need a printer with interfaces designed just for those machines—unless you buy a special adapter. The Macintosh, for all its ease of use, is a difficult computer to set up for use with a daisywheel printer.

**Available word processors.** What word processors are available for the computer? How large and how good is the selection? The software (not the hardware) is still at the heart of writing with a computer, but all software reflects the computer on which it's running. There are more trade-offs. To a greater or lesser extent (indicating a lesser or greater program), the more power a program gives you, the more complex that program is.

In coming to a decision, make a list of the "Pros" and "Cons." We've begun that process for you in the following sections by delineating the strengths and limitations of various computer systems for word processing.

## AMIGA

**Strengths:** Mouse-and-icon interface for ease of use. The keyboard has a good layout and decent feel. The excellent graphics give the potential for "what you see is what you get" (WYSIWYG) word processors. Lots of memory (256K), with room for expansion.

**Limitations:** Mouse-driven operating system, which makes touch typists take their hands off the keyboard. There are few available word processors, none of which is powerful.

**Rating:** Good, with promises of Very Good. Someday, the quality of word-processing software available for the Amiga will match the computer's large memory, fast microprocessor, and graphic strengths.

## APPLE IIe/IIc

**Strengths:** Good keyboard layout. Many extremely capable word processors. A wide choice of printers work with them (especially the IIe). 128K memory is standard.

**Limitations:** The cost for a basic system is more than for an Atari ST and many IBM PC compatibles, and the Apple IIe and IIc are priced not much lower than the sibling Macintosh. Documents longer than about 30 pages need more than the standard 128K, and, even with extra memory, most word processors don't use it. Some writers dislike the closely spaced keys on the Apple IIc keyboard.

**Rating:** Good to Very Good. As advanced word processors are developed for the newer, more powerful IIcs, this line could rate Very Good.

## ATARI 800 XL/XE

**Strengths:** A fine value. As Bill Wilkinson, of OSS (Optimized Systems Software) in San Jose, California, and publisher of *The Writer's Tool* word processor for the Atari, said, "There are undoubtedly better systems, but I doubt there are better ones for the price." Many printers will work, since the computers use a standard parallel interface if you buy a converter.

**Limitations:** Although devoted users (as well as C 64 and CoCo owners) might disagree vociferously, even one on-line Atari fan had to use the word "unfortunately" when describing the Atari's lack of an 80-column display. You could ask for more memory than 64K, too, but you won't get it (except for use as a RAM disk).

**Rating:** Good on features and Very Good for value. Price is a big factor here, with a basic system going for around \$350 to \$400.

## ATARI ST

**Strengths:** Matthew Stern, a frequent contributor to FAMILY COMPUTING, likes the ST for writing because it uses a standard keyboard layout and for its memory (512K) and speed. "I can scroll through documents and make changes quickly," he said, "without waiting for the screen to redraw." He also likes the mouse-and-icon interface for ease of use and appreciates how rapidly the drives save and retrieve even his longest documents.

**Limitations:** Someday, not too long from now, the ST will boast word-processing software as powerful as the hardware. But as this is being written, only mid-level word processors are available.

**Rating:** Good, growing to Very Good. On a cost basis, the Atari ST is a big winner. We've seen ads for a basic monochrome 520ST system for less than \$500.

## COMMODORE 64/128

**Strengths:** Not only does the C 128 deliver more than the C 64—twice the memory and an 80-column display—it can also run such classic word processors as *WordStar*, since the C 128 supports the venerable CP/M operating system. While you'll probably have to search to find CP/M word-processing programs (luckily, the C 128 borrowed the CP/M format used by the once-popular Kaypro II), the extra power may well be worth the effort.

**Limitations:** Unless a programmer does tricks with the graphics mode, you're limited to a 40-column display with a C 64. (Even with tricks, 80 columns on the C 64

may not be the most readable.) As for the C 128, 80-column display on an RGB isn't the clearest. And with both machines, the disk drive is abysmally slow when you save or retrieve text; that's a fault of the operating system. Also, there's a nonstandard keyboard and a limited choice of printers that don't need special adapters.

**Rating:** C 64: Good on features and Very Good for value. Prices are comparable to the eight-bit Ataris. C 128: Very Good on features and Good for value. Features are comparable to the Apple IIc.

## IBM PC & COMPATIBLES

**Strengths:** Easily expanded to 640K memory. Wide range of quality word processors for everyone from novices to experts. Rock-solid 80-column display in monochrome. Most printers work with IBM PC & compatibles. Low-cost compatibles have brought the prices down to fit into many families' budgets.

**Limitations:** MS-DOS, MS-DOS, MS-DOS. The difficulty with this notorious operating system has led to a cottage industry in books just to explain it. When MS-DOS takes on the same mouse-driven guise as the Macintosh, for example (as with *Microsoft Windows*), it slows down considerably. Be aware of the keyboard's configuration; with the original IBM PC and certain clones, some keys (such as the left SHIFT key) vary from their usual placement.

**Rating:** Very Good, but not quite Excellent. The limitations imposed by MS-DOS preclude excellence.

## MACINTOSH

**Strengths:** With its slew of fonts and graphics orientation, the Mac is the apotheosis of "what you see is what you get" on a personal computer. Easy to operate, coupled with enough memory (512K minimum) for fairly large documents. Some powerful word processors, too—especially *Microsoft Word*.

**Limitations:** Speed is not one of the Mac's strongest points; it can slow down during certain operations, such as reformatting text or saving and retrieving files. The 512K Mac keyboard has no arrow keys to move the cursor. Some writers find the mouse cumbersome. You're limited in compatible printers.

**Rating:** Very Good, verging on Excellent (with reservations). Why the reservations? Fewer alternatives in word-processing packages than, for example, the IBM PC world or the Apple II line. Fewer printer alternatives, too. But prices have dropped enough to make it an exceptional value.

## THE ENVELOPE, PLEASE. THE WINNER IS . . .

When you look at all the factors, the winner is . . . anybody who writes with a computer instead of a typewriter, ballpoint, goose quill, or other writing tool.

Are you disappointed that there's no clear-cut winner? On the contrary, it should make you happy to know that there are so many acceptable word-processing choices, and many that are much more than merely acceptable.

It's funny, though—when people like their word processors, they often see few (if any) weaknesses. Yet, when you look at what's technologically possible, there are no excellent computers for word processing. Lance Paavola, FAMILY COMPUTING's technical director, wants a computer that displays a whole page at a time, and I would like to write correspondence by talking into the computer. While found in high-end systems, such capabilities are not yet affordable for most computer owners. Compared to what we can imagine, an *excellent* computer system for writing has yet to hit the market. ☐

## THE EIGHT-PART SERIES

This is the final part of eight in the series, "The Guide to Writing with Computers." Here's an outline of the series in the order in which the articles appeared.

**Part 1** (August 1986): "Finding the Right Word Processor." Take our quiz, tally your score, and check the chart to find the right program for your needs.

**Part 2** (September 1986): "Add Power and Precision to Your Prose." Spell-checkers, thesauruses, grammar checkers, and outlining programs.

**Part 3** (October 1986): "Search and Replace Makes Writing Easier." Examining a dynamic, time- and error-saving duo.

**Part 4** (November 1986): "Headers, Footers, and Footnotes." Learn how to spruce up your printouts.

**Part 5** (December 1986): "Writing Shortcuts." Save time, increase accuracy, and end drudgery with word-processing macros.

**Part 6** (January 1987): "Learn to Control Your Printer." Make your printouts look exactly like you want them to.

**Part 7** (February 1987): "Word Processors: The Ultimate Team Players." Learn how communications, data-base, and spreadsheet programs can jazz up your writing.

**Part 8** (March 1987): "Which Computers Make the Best Word Processors?" Rating the most popular machines.

If you're missing back issues and want to catch up, send a note indicating which month(s) you want and a check for \$3.95 per copy (\$2.95 each for five or more) to: Back Issues, c/o FAMILY COMPUTING, P.O. Box 717, Cooper Station, New York, NY 10276-0717.

# Guide to Computer Repair

BY LINDA WILLIAMS

**F**inally, Lois Gilman thought, the end is in sight. After two years of work on a book, she was ready to print out her hefty manuscript and deliver it to her editor. Exhausted and relieved, Lois activated her printer to churn out the eight disks worth of material—and realized something was wrong; her printer typed away but no characters appeared on the page.

Frantic, she tried calling the manufacturer of the Daisywriter printer, Computers International, but learned that the company had gone out of business. Lois then rummaged through her receipts and documentation and found the name of the firm that had distributed the printer to her store. She called, only to hear that they didn't handle that printer any more.

"It was one of the more frustrating experiences of my life," Lois says. "I was at an impasse. I had about 10 hours of printing to do." Nearing desperation, she learned of a third-party company that could repair her almost-extinct printer. Lois carted the IBM Selectric-size printer off to a local Honeywell service center, and by the next day, a repairperson had "made an adjustment." She shelled out in the neighborhood of \$40 and took home her newly fixed (or so she thought) printer. When Lois tried it, she saw that only partial letters would print out. She took the machine back and she waited while the repairperson made some additional adjustments with pliers. She returned home once again and characters still weren't printing out the right way, so she called Honeywell and said, "We're coming back."

Before making the third trip, though, Lois decided to try some-

thing herself; she replaced the IBM printer ribbon—made by a company other than IBM—with a ribbon made by IBM. Holding her breath, she tried printing out her book manuscript one more time, and, voilà, the printer began churning out perfect-looking characters.

## LOOK BEFORE YOU LEAP

At one time or another, many computer owners waste time and throw away money on unnecessary repairs. Lois spent a week and \$40 and took time off from her job to solve her minor printer problem. The bills are expensive reminders of the value of preventive maintenance and thinking before panicking. Checking the following possibilities before you call a repair team could save you money and embarrassment.

- It sounds basic, but make sure the computer, monitor, and printer are turned on. Also, be sure to check the monitor and printer controls. For example, if your monitor's brightness is turned way down, your monitor may appear to be "dead."

- Figure out which computer component is giving you trouble. Is it the disk drive, the printer, or the monitor that doesn't work? Through a process of elimination, you can narrow down the problem. This will make it possible to solve the problem yourself or to lead a repairperson to the source of trouble.

- Make sure all cables and power cords are attached securely.

- Try rebooting the system.

- If the printer malfunctions, check the paper supply, make sure the printer is on-line, and examine the printer ribbon. Your printer may stop working when it reaches the end of the printer ribbon, or the ribbon may be jammed or misthreaded. You should also make sure your printer's DIP switch settings are correct. (You

WHAT CAN YOU DO?  
CAN YOU FIX IT YOURSELF?  
WHERE DO YOU GO?  
WHAT COULD BE WRONG?  
WHO SHOULD YOU HOLLER FOR?

can find out more about DIP switch settings in your printer manual.)

- If you're using a television instead of a monitor, make sure the television is tuned and set to the correct channel.

- Are your disks inserted correctly? Make sure the proper disks are in the appropriate drives, with the doors closed. Another surprisingly common error is inserting the disks upside down or backward.

## GO BACK TO THE SOURCE

There was a time when, if your computer ailed, you could call the manufacturer's toll-free number and get free advice from an expert technician. Unfortunately, most companies have stopped paying for these phone lines. You can still get the advice from a number of computer manufacturers, though now on your nickel—not theirs.

**Apple** still maintains a toll-free number, which is a referral to dealers. By calling (800) 538-9696, you can get the phone number of a nearby authorized dealer. If the dealer can't solve your problem, he or she can ask questions of an Apple support technician via electronic mail or the phone. Calling Apple's customer-relations number (408) 973-2222 will put you in touch with a representative who can also help you with your questions or find someone else

LINDA WILLIAMS wrote "The ABCs of Computer Care and Maintenance" in the February issue.

who can help.

**Atari** owners with computer problems or questions can call the customer-relations number, (408) 745-2367. Representatives will tell you how to send in your machine for repair or, if you prefer, refer you to a nearby authorized service center. They will also let you speak with technicians, in the hopes of helping you solve the problem yourself. Atari doesn't actually repair machines; it replaces faulty components.

**Commodore** equipment comes boxed with a list of local service centers, including phone numbers. If you've misplaced that list by the time you need it, call the company's customer support at (415) 436-4200. A company spokesperson says that you will reach someone who can give you the appropriate number to call for repairs.

**IBM** owners, until last summer, could turn to one of the company's 84 product centers for advice and repair. Now NYNEX owns 81 of the centers and calls them NYNEX Business Centers. These retail outlets still service IBMs and other machines (such as Compaq and Apple Macintosh).

**Tandy** owners can go to one of the 500 Radio Shack computer centers nationwide. Just call or carry your machine in, and someone will help you out. That is, so long as the components come from Tandy/Radio Shack. These centers will not touch third-party brands.

### THIRD-PARTY DOESN'T MEAN THIRD-RATE

It isn't unusual for a dealer to refuse to service competing brands, which can be a problem if you have a hybrid system, that is, a computer system with components from more than one manufacturer. Instead of contacting Tandy (and paying!) to see if the problem is in your CPU, and then calling Toshiba to see if it's in your printer, you can make one call

to a third-party repair place. In addition to the convenience, the service is almost always 30 to 50 percent less expensive.

The third-party repair industry has undergone enormous growth and is now a billion-dollar-a-year business. About 70 percent of the computer maintenance market belongs to 10 or 12 firms, including TRW, Sorbus, Control Data, Honeywell, and RCA. While much of this business goes to corporate accounts, several firms cater to families with computers at home. The Computer Doctor, for example, services Apples, Commodores, Compaqs, IBMs, Kaypros, and Leading Edges. Computer Doctor's house calls cost \$100 for the first hour plus parts; in-store service costs \$75 for the first hour plus price of parts.

Some cautious computer owners are wary of the quality of third-party repair. Consider, though, that the "big guys" often turn to third-party places when they can't handle the volume or can't service an off brand. Even if you consciously stick to the big-name shops, you may be getting third-party service. Kirk Etter, owner of Micro Medics in Morton Grove, Illinois, claims that 80 percent of his business is for computer stores. And you better believe those stores don't pass on the cheaper, third-party rates to you.

### WE ALL NEED SOMEBODY TO LEAN ON

Whenever you run into computing problems—whether it's a dark monitor, motionless disk drive, or a printless printout—there are a number of places to turn for help *before* you pack up your ailing machine and rush back to the computer store, manufacturer, or third-party repair shop. Try the following:

**Users' groups.** An excellent source for technical information, users' groups generally provide monthly meetings, newsletters, bulletin boards, workshops and training ses-

sions, and phone numbers of experts in the group. They are inexpensive to join and may save you bundles in the future. Your computer's manufacturer may know of users' groups in your area.

**Apple** users' groups are independent of the manufacturer. Nevertheless, Apple will guide you to one in your area: Call (800) 538-9696 and ask for extension 500.

**Atari** boasts some 600 users' groups and keeps a list in the customer-relations department. To find one near you, call Atari at (408) 745-2012.

**Commodore** representatives coordinate their users' groups. For more information, write to Pete Baczor, Users' Groups Coordinator; Commodore Business Machines, 1200 Wilson Drive, West Chester, PA 19380.

**IBM** owners can find information about IBM users' groups at the NYNEX Business Centers (formerly IBM Product Centers) and at ComputerLand. One large one, the New York PC Users' Group, maintains a hotline ((212) 533-NYPC), as well as a bulletin-board number ((212) 697-1809).

**Tandy** owners can get more information about Tandy users' groups at the nearest Radio Shack Computer Center. Tandy Corp. doesn't maintain a master list.

And finally, check local computer stores for information on new, small, or multibrand users' groups not listed by the manufacturer.

**On-line services.** If you don't have the time for club meetings, you may be able to get electronic guidance. Both CompuServe Information Service and The Source offer sections for specific computers, where you can speak with experts (electronically) about your computer problem. To become a subscriber to the service or for more information, contact CompuServe, 5000 Arlington Centre Blvd., Columbus, OH 43220; (800) 848-8199; or The Source, 1616 Anderson Road, McLean, VA 22102; (800) 336-3366; or (703) 734-7500.

**Bulletin boards.** Another electronic alternative is a bulletin board, where users post and read messages. Most avid computerists love to share their hints, advice, and caveats. The Source and CompuServe have listings of their own bulletin boards (searchable by state and area code). You might consider a subscription to *Bulletin Board Systems*, which is published eight times a year for \$26.50 by Meckler Publishing Inc., 11 Ferry Lane, Westport, CT 06880.

**Neighborhood whiz kids and adults.**

Often, help is no farther than your own backyard. Who knows? Your children's computer-expert friend may be able to help you out with a problem. Or better yet, call that computer lovin' friend of yours who con-

vinced you to buy a computer in the first place.

**Books and magazines.** Of course, *FAMILY COMPUTING* is a good source for computer information on all levels. And it's a good idea to keep several computing books within reach of your computer chair. Manuals for each component and piece of software should be right there, too. You'll be amazed at the nuggets of advice these guides offer.

*Avoiding Computer Nightmares*, by Howard Hillman (McGraw-Hill; \$12.95; [609] 426-7600), gives you easy-to-understand instructions for care and maintenance in an enjoyable, light format.

*The Care and Feeding of Your Personal Computer*, by Robert Rafferty (Holt, Rinehart, and Winston; \$9.70; [201] 648-6060), provides nuts and bolts advice about setting up a workplace, preventive care, and repair.

*How to Use the Apple II and Ie Computer* (also available for the Coleco Adam and the Macintosh) from The Dilithium Press (\$7.95; [503] 243-3313) offers information about use, peripherals, and hints for maintenance and troubleshooting.

*The Personal Computer Handbook*, by Peter Rodwell (Barron's Educational Series; \$16.95; [800] 645-3476), is an informative, practical guide to microcomputers. Its detailed diagrams will give you a rudimentary knowledge of how a computer works.

For more advanced users, take a look at *The Plain English Repair and Maintenance Guide for Home Computers* or *The Plain English Maintenance and Repair Guide for IBM Personal Computers* (Simon & Schuster; \$14.95 each; [800] 624-

0023 or [800] 624-0024 in New Jersey). The author of both, Henry F. Beechhold has a new book entitled *The Brady Guide to Microcomputer Troubleshooting and Maintenance* (\$17.95), also by Simon & Schuster. Beechhold has also written six articles on the subject for *FAMILY COMPUTING*, which appeared in October 1985 and December 1985–April 1986.

### SEEK AND YOU SHALL FIND

If you know how to look, you'll be able to isolate and solve most computer and peripheral problems. To do so, you'll have to master the art of troubleshooting—a combination of methodical testing and applying insight gained through experience. If you're a car owner, you probably troubleshoot to figure out what's wrong if, let's say, your car won't start. (Is it the battery, the starter, or maybe an empty gas tank?) As with car parts, it's important for you to understand the purpose and function of your computer's components so you can at least pinpoint the problem's source, if not solve it.

At the first sign of malfunction, turn off the system and all the components. Check that all of the cables and connectors are secure and jiggle them a bit. Pause for a moment and then turn the system back on. If that doesn't do the trick, make sure that all of your computer's circuit cards and internal connections are secure. (You can only do this if your machine has open architecture.)

A computer and printer may have built-in diagnostics that you can run. For example, the IBM PC and Compaq go through a self-test cycle every time you turn on the machine. Also, in the back of the *IBM Guide to Operations* manual, you'll find a diagnostic disk that contains further tests for your circuit boards and peripherals. Make note of any error messages and check the manual for their meanings.

If you think you've located an ailing component, try substituting it with a working one. (It's a good idea to make note of which neighbors and business associates own the same components you do anyway, in case of an "emergency".)

It's simple to discern a misaligned disk drive. Disk-drive analyzer kits are available for most brands. Tandy, for example, manufactures one for its IBM compatibles for \$29.95.

### I'D RATHER DO IT MYSELF

You may feel comfortable enough to repair the machine yourself but proceed with caution. Remember that most breakdowns are not with the CPU or monitor, but with electromechanical components, such as the printer and disk drive. Here's something else you should be aware of: Taking apart and repairing your own machine may void your warranty. This means that if your machine needs any further repairs that you can't fix yourself, the manufacturer

or dealer won't fix it either. (See last month's "ABCs of Computer Care and Maintenance" for more on warranties.)

A computer is a complicated and delicate piece of machinery that many people choose not to tinker with. How much you learn about the workings of your own machine and how much you leave in the hands of "experts" is up to you. Everyone is different. However, no matter how mechanically inept you claim to be, you should know where to turn when you need help, just as you should know when help isn't necessary at all. And you should always pay attention to your computer's unique sounds when it is working well: the bleep of start-up, the whirl of the disk drive when it accesses information, or the horizontal motion of the print mechanism. If you know the healthy sounds, you'll be able to detect the "sick" ones. **FC**

# ANNOUNCING THE THIRD ANNUAL

Win One of 50 Prizes—More Than \$5,000 Worth of Computer Systems, Hardware, Software, and Other Prizes to Be Given Away

Has your family found some winning uses for its computer? Yours could be one of the families to win a newly released Apple IIgs computer system, complete with printer and monitor. Or you could win an Okidata letter-quality printer, a Tandy 102 laptop computer, a Hayes 1200-baud modem, software, or one of dozens of other prizes in FAMILY COMPUTING's "Third Annual Computing Family of the Year Contest."

FAMILY COMPUTING is looking for families who are using their computers together in especially rewarding, unique, and/or efficient ways. If you don't think your own family is ready to be our "1987 Computing Family of the Year," nominate friends, relatives, or neighbors who are. Remember, of course, that, although there's only one Grand Prize, there will be lots of other prizes given away.

## WHAT YOU NEED TO DO

Here are some of the questions we'd like you to answer. Put your story into essay form, with a maximum of 2,000 words.

- Why did your family buy a computer?
- Has your computer surpassed its original expectations? If so, how?
- How has it changed the lives of family members and how the family does things?
- How does each family member use the machine?
- How does the family use the computer together?
- Also, be sure to include the following information: 1) your name, address, and phone number; 2) computer and other hardware you own; 3) software packages you use most; 4) the month and year your family bought its computer(s); 5) the names and ages of all family members.

Entries will be judged by the FAMILY COMPUTING staff. It's not your technical expertise that's important to us. What is important is how you put your computer to use. The family whose essay

the judges deem best—that is, the family who has made the greatest leaps and bounds with a computer—will become our "1987 Computing Family of the Year." Good luck!

## GRAND PRIZE

**Apple IIgs Computer System.** Includes system (CPU), keyboard, mouse, 3.5-inch disk drive, RGB (color) monitor, and ImageWriter II printer. Suggested Retail: \$2,500

## FIRST PRIZE

**Okidata Microline 293 Letter-Quality Printer.** Suggested Retail: \$949

## SECOND PRIZE

**Hayes Smartmodem 1200 and Smartcom II Software.** Suggested Retail: \$748

## THIRD PRIZE

**Tandy 102 Laptop Computer.** Includes computer, printer cable, and modem cable. Suggested Retail: \$534

## FOURTH PRIZE

**Home-Control System from X-10 (USA) Inc.** Includes three modules, software, and cables. Suggested Retail: \$115

## FIFTH PRIZE: FOUR WINNERS

**\$100 Worth of Software and Accessories.**

## SIXTH PRIZE: SIX WINNERS

**Subscription to CompuServe Information Service.** Suggested Retail: \$39.95

## SEVENTH PRIZE: 15 WINNERS

**New or Extended One-Year Subscription to FAMILY COMPUTING.** Suggested Retail: \$19.97

## EIGHTH PRIZE: 20 WINNERS

**FAMILY COMPUTING Tote Bag.**

The Ofstehage family of South Dakota, our 1986 Computing Family of the Year.

## CONTEST RULES

1. Deadline: Your entry must be postmarked by March 31, 1987.
2. Include a family photo and identify each member on the back.
3. Keep your entry shorter than eight double-spaced pages.
4. Scholastic Inc. employees, advisory board members, and members of their immediate families are not eligible.
5. Previous winners of the "Computing Family of the Year Contest" are not eligible.
6. Send nominating letters to Computing Family of the Year, FAMILY COMPUTING, Scholastic Inc., 730 Broadway, New York, NY 10003.

# ROMAN NUMERAL CONVERTER

HERE'S HELP IN DECIPHERING—  
AND DEVISING—ROMAN NUMERALS

BY JOEY LATIMER

One day, while I was watching some television movie credits roll by, the letters MCMLXXXI flashed on the screen. I thought I knew my Roman numerals, but I have to admit, I had trouble with this one. I was sure surprised when I fired up my *Roman Numeral Converter* program and discovered that MCMLXXXI is 1981 in Arabic (or conventional) numbers!

To use *Roman Numeral Converter*, just type the program into your computer, SAVE it, and then RUN it. You will be greeted by the main menu and given choices of converting Arabic to Roman, converting Roman to Arabic, or quitting. If you choose Arabic to Roman, you will be prompted to enter an Arabic number. Make sure not to put commas in your number (e.g., enter 2543 not 2,543).

The Arabic number you input must be no higher than 3999 due to limitations of computer character sets. The Roman numeral for 4000 is  $\overline{M}$  (a bar over a letter multiplies the value of that letter by 1000, so  $\overline{V}$ =5000). Some computers cannot print these overbars except in graphics mode, and other computers cannot print them at all. So our program only deals with Roman numbers that can be written using normal letters.

If your choice is Roman to Arabic, then you will be prompted to enter a Roman number, made up of these letters:

|      |        |
|------|--------|
| I=1  | C=100  |
| V=5  | D=500  |
| X=10 | M=1000 |
| L=50 |        |

Here are some examples of Roman numbers and

their Arabic counterparts:

|                 |
|-----------------|
| II=2            |
| VIII=8          |
| XVII=17         |
| LXX=70          |
| CXL=140         |
| DCCCLXVI=866    |
| MCMLXXXVII=1987 |

## ROMAN RULES

1. The general principle is that a smaller-valued letter after a larger-valued one adds to the cumulative value, and a smaller letter before a larger one subtracts from its value.

2. Double subtractions are not allowed. For example, XCM is illegal because it is ambiguous: Do you first compute the value of XC and subtract it from M, getting 910, or do you subtract the value of X from CM, getting 890?

3. The same letter can't appear more than three times in a row. For example, you say IV, not IIII, and CM, not DCCCC.

4. I can only precede V or X; X can only precede L or C; and C can only precede D or M. For example, 999 is written CMXCIX, not IM.

#### IBM PC & compatibles/Roman Numeral Converter

This program has been tested and found to work on the following computers and hardware configurations using the BASICs shown: IBM PC w/Color/Graphics Monitor Adapter or Monochrome/Printer card, w/Disk BASIC D2.00 or Advanced BASIC A2.00. IBM PCjr w/Cartridge BASIC J1.00. Tandy 1000 w/GW-BASIC 2.02 version 01.01.00. It should also work on many other PC compatibles.

# Monitor Sale

## 14" RGB & COMPOSITE COLOR MONITOR

Three monitors in one! Allows the use of C-128 and C64 computer modes - composite and 80 column RGB mode. Must be used to get 80 Columns in color with 80 column computers. Specially designed for use with the C128's special composite video output, plus green screen only option switch. (Add \$14.50 shipping and handling)

**SALE \$237<sup>00</sup>\*** **SALE**

List \$399

**Super High Resolution**

**Great for IBM®, Apple®, Laser®, Atari® & Commodore® Computers**

## 12" 35MHz GREEN OR AMBER MONITOR

This new 80 column, 1000 lines at center, high resolution display monitor is precision engineered to give you the best high resolution screen possible. The 35 MHz Bandwidth allows use with IBM® and Apple® computers. The composite screen is non-glare which makes it easier to read by reducing eye strain. Monitors come in green or amber color screens. Fantastic for business!

**SALE \$99<sup>00</sup>\***

List \$249

## 13" COLOR DISPLAY MONITOR

This all-purpose 13" color display monitor accepts an NTSC composite signal and will work with a wide assortment of today's personal and professional computers. It generates crisp, easy-to-read alphanumeric or graphic display through the use of a slotted mask, black matrix quick start picture tube. This versatile monitor also has a built in audio amplifier and speaker with volume control, a 1000 character display capacity, and an all plastic cabinet for portability and easy cleaning. (Add \$14.50 for Shipping and Handling)

# Release The Graphic Designer In You With PrintMaster Plus

## Grand Opening!

### A Partner in Design

Jump into the creative process anywhere you choose — graphics, format or copy. PrintMaster Plus is exceptionally flexible. And with over 100 pieces of clip art, 10 type fonts in 5 styles,

and 11 border designs to select from, you'll have an endless variety of creative choices to make.

### Best Of All . . . The Price!

PrintMaster Plus is *very* affordable graphic design software. So now you *do* have the time *and* the budget to develop the undiscovered graphic designer in you!

To get your copy of PrintMaster Plus, just ask your local computer dealer.

Available on MS-DOS compatible computers: Commodore Amiga, Atari 520 ST, Commodore 64/128, and Apple II computers.

Time and time again, you've wanted to create exciting banners, posters, greeting cards, stationery, or calendars. If only you had the time *and* the budget to complete these projects yourself, you would! Well, now you can. Thanks to the creative power in *PrintMaster Plus* — the innovative new graphic design software from Unison World. In just a matter of minutes, you'll be able to see your great graphic ideas in print!

<Esc> <C>alculate <D>elete <I>ntake  
 <L>oad <O>ptions <P>rint <Q>uit <S>ave

If you've ever counted calories or wondered how much bike riding you need to do to burn off the extra calories from last night's slice of double-chocolate layer cake, then our *Calorie Calculator* program may be just what you need. Bernadette Grey, associate editor at FAMILY COMPUTING, came up with the idea of a program that could track her daily calorie expenditure and compare it to her calorie intake, and was the first to try it out.

## BERNADETTE'S DAY

Bernadette recorded all of her activities and everything she ate in a 24-hour period. Her day started with a 50-minute walk to work, where she read the paper and had a large bran muffin and a pint of orange juice. At work, Bernadette averaged six hours of desk work (sitting), and two hours of walking or standing. For lunch she ate plain yogurt, an unbuttered whole wheat bagel, a banana, and a diet soda. She also admitted to sampling two Girl Scout Cookies but rumor has it that she nibbled a few more than two.

After work, Bernadette walked home (50 minutes), had a slice of pizza and a diet soda, and then

walked to and from the gym (10 minutes each way) for 60 minutes of stretching, aerobics, and calisthenics. Bernadette then read and watched some television for three hours and retired for eight hours of sleep. The hour and 20 minutes that were not accounted for with specific activities, were spent dressing, preparing or buying food, and eating.

Bernadette then put the activity information into *Calorie Calculator* and used the chart below to estimate the number of calories that were burned per minute for each activity. Bernadette used the statistics listed for a 130-pound person since that was the closest to her actual weight. She also estimated that she had consumed about 1,740 calories that day. With the program she was able to calculate the total number of calories burned and the NET result (total caloric intake minus total calories burned). Because Bernadette's NET total was a negative number (-917), she probably lost weight that day! She could either treat herself to a few extra calories (e.g., a double scoop of Häagen Dazs ice cream), or accumulate the negative calories for a very

positive effect. For every 3,500 calories over her intake that she burns, she will lose one pound of body fat. Although Bernadette watches her diet, she is careful to maintain healthy eating habits and is sure to inform her doctor of any significant fluctuation in her weight.

## HOW CALORIE CALCULATOR WORKS

When you run the program, a worksheet appears on the screen. The worksheet is a place where you can input activities, the number of calories burned per minute (CBPM), and the number of minutes you performed each activity (MIN). If you are familiar with spreadsheets, you will recognize the "cells" for data entry, the recalculation function, and the ability to set up a template.

## HOW TO INPUT INFORMATION

To move around the worksheet, press the arrow keys. These keys move the highlighted cell from one column to another within a row, or from one row to another within a column. (Apple II Plus users must use CTRL-J to move down and CTRL-K to move up.)

To enter your first activity, position the highlighted cell in the activity column at row 1 (see photo). Type your activity (e.g., WALKING 2 MPH) at the entry line and press RETURN or ENTER (or an arrow key). Your activity will automatically appear in the highlighted cell. You can input up to 12 activities in this column with up to 20 characters per activity.

On Apple computers, there is no inverse mode for lowercase characters, so the highlight will cause lowercase letters to appear as special characters (e.g., @, %, !). They will turn back to normal when you move the highlighted cell and will print correctly.

Next, you can move (using the arrow keys) to the column marked CBPM. This column is for entering the calories burned per minute doing a specific activity. If you've been walking 2 miles per hour, you would check the chart for this activity and find the number which corresponds most closely to your weight (e.g., a 130-pound person will burn approximately 2.8 calories per minute.)

You may wish to adjust the numbers in the chart to more closely represent your weight. If, for example, you weigh somewhere between 130 and 150 pounds, you could select some number between 2.8 and 3.1 for the CBPM entry.

Once you select a number, make sure the highlighted cell is in the CBPM column next to the correct activity. Enter your number on the entry line and press RETURN or an arrow key to see the entry appear in the highlighted cell. This column will accept 1-, 2-, or 3-digit numbers up to 25.0.

You will next want to enter the number of minutes you perform each activity in the column marked MIN. Position the highlighted cell and enter your activity time in minutes from 1 to 900.

If you make a mistake in the input mode and have not yet pressed RETURN, you can erase your last entry with the <ESC>ape key. Pressing <ESC>ape again will take you to the beginning of the entry line. You can also delete one character at a time with the backspace delete key. Apple users can also use CTRL-B to delete one character at a time.

## USING THE COMMAND MENU

Up to this point in our example, all of the worksheet data has been entered in the input mode from the entry line. To

view a list of other functions available in *Calorie Calculator*, type slash (/). This displays a menu of commands at the bottom of the screen. The command keys include <ESC>ape, <C>alculate, <D>elete, <I>ntake, <L>oad, <O>ptions, <Q>uit, and <S>ave.

<ESC>ape. Selecting the escape key from the command or options menu takes you back to the entry line. You can also press <ESC>ape to exit a function that you have selected from a menu. If, for example, you selected the <P>rint function from the command menu and then realized that you were not ready to print your calorie worksheet, you could press <ESC>ape to exit the command.

<C>alculate. You can choose the <C> key from the menu to calculate the number of calories burned for each activity and the total number of calories burned for all activities listed. This command will also calculate a net total, where NET TOTAL = TOTAL CALORIC INTAKE - TOTAL CALORIES BURNED. If you

change a number entry, you must use this command to recalculate the CAL. BURNED column and the NET.

<D>elete. The <D> key deletes the current row. Choosing this command will not only delete the area under the highlighted cell but the entire row of that entry (i.e., ACTIVITY, CBPM, MIN., and CAL. BURNED). Entries below a deleted row will automatically move up to fill the vacant space.

<I>ntake. Selecting the <I> key lets you input the number of calories consumed. If you intend to compare the number of calories burned in a given day with the number of calories consumed, or if you just want to know how long you would have to swim to burn up the calories in a turkey sandwich, you must estimate how many calories are in the turkey sandwich.

To estimate your caloric intake, you will need a thorough calorie chart like *LeGette's Calorie Encyclopedia* (Warner Books, 1983). The intake entry must be a positive number less than 10,000. No decimal values will be

## CALORIES BURNED PER MINUTE

Weight in Pounds

# CLONEWARE™

for PC-AT/XT Compatibles and IBM too!

## DeskTalk

- Address Book\*
- Calendar\*
- Communications
- Phone Dialer\*

### \*Memory Resident!

- **CALENDAR\*** – maintains and prints daily, weekly and monthly appointments for all 24 hours of every day.
- **ADDRESS BOOK\*** – organizes, sorts, indexes, searches and prints names, addresses, phone numbers, notes and more.
- **PHONE DIALER\*** – automatically dials phone numbers and long distance prefixes for you.
- **COMMUNICATIONS** – fully Hayes compatible; allows you to send and receive information quickly and easily.

Non-resident versions also included.

**\$59.95**

## ALS18C Financial Consultant

This easy to use, menu-driven program runs as a **memory-resident** "pop-up", providing instant access to your calculator even while you are using another program.

- Internal Rate of Return
- Loan Amortization
- Break Even Analysis
- Buying vs Leasing
- Discounted Cash Flow
- Savings and Annuities
- Real Estate
- Depreciation
- Statistics
- Leasing
- Percentages
- Simple Interest
- IRA
- Dates
- Bonds
- Investments

### SCIENTIFIC CALCULATOR

- computes log, sine, cosine, pi, tangent, inverse, square root, exponents and more in either decimal or hexadecimal notation.

**\$89.95** Non-resident version also included.

accepted.

**<L>oad.** The <L> key will let you load a previously saved file. If you try to load a file that has not been saved you will get an error message. Simply press any key to continue. To load or save a file to or from your second disk drive, you must specify the drive at the FILENAME prompt. On IBM PC & compatibles, type "B:" and then the filename. For the Apple version, add ".D2" to the end of the filename. If you save or load to the second disk drive on the Apple it will change the default drive. You can only use one disk drive in the Commodore version.

**<O>ptions.** The <O> key displays the option menu where you can choose to enter your <N>ame, the <D>ate, or your <W>eight. Any of these options can include up to twenty characters. To return to the entry line, choose <ESC> from the option menu. If you enter a <N>ame, <D>ate, and/or <W>eight option, they will be recorded by the program and will appear on a printout, but not on the main worksheet screen.

**<P>rint.** This key allows those of you with an 80-column printer to <P>rint your chart. When you select the <P> key, you will be asked to "PRESS <SPACE BAR> WHEN PRINTER READY." Make sure that your printer is hooked up correctly and turned on. If you do not wish to print at this time, simply press <ESC>ape.

**<Q>uit.** <Q> lets you quit the program altogether. After selecting this key, you must "PRESS <Y> TO EXIT OR <ESC> TO CONTINUE."

**<S>ave.** The <S> key lets you save the chart with any filename you choose. Using an already existing filename to save a new file will overwrite the old file. Make sure you don't overwrite a file un-

less you want to because the program will not give any warning.

The program will not allow you to see a catalog of saved files. To do that, you must exit the *Calorie Calculator* and type the command for your computer (CATALOG for Apple, FILES for IBM PCs, and LOAD"S".8 for Commodore).

## CREATING A TEMPLATE

Because Bernadette has set up and saved a worksheet of daily activities and the CBPM for each, she can use the program as a template. If she wants to calculate her calorie expenditure she can just load the program, select <L>oad from the command menu, and type the filename that the worksheet was saved under (e.g., CALORIE.BG).

Using this worksheet as a template, Bernadette can simply change the <D>ate, enter changes in the time each activity is performed, add activities that are not included, or delete any that do not apply. As her weight changes, she may even want to save several templates with different CBPM statistics.

## TYPING TIPS

*Calorie Calculator* is a fairly long program so it's probably a good idea to type it in small sections, saving your work frequently. Don't be discouraged if it doesn't run the first time you try it. The best way to find your typing errors is to print a listing of the program and proofread it carefully. Or better yet, have a friend or family member read the program lines to you character by character. Remember that the program must be typed in *exactly* as it appears in the magazine if it is to run correctly. Finally, when you've got the program running, make a backup copy.

## Apple II series w/48K RAM & disk drive (printer optional)/Calorie Calculator

### IBM PC & compatibles w/128K RAM & disk drive (printer optional)/Calorie Calculator

This program has been tested and found to work on the following computers and hardware configurations, using the BASICs shown: IBM PC w/Color/Graphics Monitor Adapter or Monochrome/Printer Card, w/Disk BASIC D2.00 or Advanced BASIC A2.00, IBM PCjr w/Cartridge BASIC J1.00, Tandy 1000 w/GW-BASIC 2.02 version 01.01.00. It should also work on many other PC compatibles.

# ADVANCED LOGIC SYSTEMS

## ONE OF THE FIRST...ALWAYS THE BEST

### HARDWARE

**CP/M Card.** Adds the CP/M 3.0 operating system and 64K RAM to your Apple, making thousands of business applications available to you. It runs at a speedy 6 MHz and includes unique utilities. Optional hard disk support and a CP/M <-> ProDOS conversion now available.

**Apple II, II+, //e, GS** **\$299.00**

**Z-Engine.** An economical and reliable CP/M 2.2 card that is, by far, more compatible than any other card of its kind. Includes CP/M 2.2 software, menu-driven utilities, warm boot without reset and an easy to use HELLO menu on cold start.

**Apple II, II+, //e, GS** **\$199.00**

**Smarterm ][.** Adds 80 columns to your monitor and special punctuation to your II or II+. Displays both inverse/normal and highlight/lowlight and uses a synchronous linear memory map for increased speed. Understands Applesoft, BASIC and Pascal commands.

**Apple II, II+, //e** **\$179.00**

**Add-Ram 16.** Adds 16K bytes of RAM to your Apple II or II+, expanding the total memory available to 64K, essential for using most software products available today. In addition, the Add-Ram's buffered RAM circuitry simplifies installation with almost all peripheral systems.

**Apple II, II+** **\$99.00**

**Add-Ram 64.** Adds 80 columns to your monitor and 64K bytes of additional RAM to your Apple //e, expanding the total memory available to 128K. Add-Ram 64 is easily installed in the auxiliary slot and can be factory upgraded to 256K.

**Apple //e** **\$99.00**

**Printermate.** A dependable Centronics-compatible parallel printer interface. Features include software control of operating parameters, 8 bit data transmission for graphics users, self test verification mode and automatic line feed generation.

**Apple II, II+, //e, GS** **\$99.00**

### SOFTWARE

**The Handlers.** A combination of the Word Handler word processor, List Handler file manager and Spell Handler spelling checker. Powerful and flexible, yet easy to learn and use, this best seller is well suited for home, school and professional use.

**Apple II, II+, //e, //c, GS** **\$99.95**

**Spellworks.** A 90,000 word spelling checker and mailmerge program for Appleworks. Spellworks quickly checks your word processing documents for spelling errors, merges data base information with word processing documents and allows you to create custom dictionaries.

**Apple //e, //c, GS** **\$49.95**

### MACINTOSH

**Word Handler for Macintosh.** This word processor takes advantage of mouse and graphics technology to simplify any writing task. Provides 4 open windows, horizontal scrolling, form generation, on-line help, abbreviations, word count and much more. Minimum 512K Mac. Not copy-protected.

**\$79.95**

**Mighty Mac.** A powerful desktop organizer that replaces your appointment book, calendar, rolodex and file of miscellaneous notes and reminders. Keyword search feature allows you to locate, view and edit any item quickly and easily. Reminders feature beeps to keep you on schedule. Not copy-protected.

**\$59.95**

## COMPUTERS WE COVER

We regularly present two or more programs in each issue for the Apple II series; Atari 400/800, 600/800XL, & 130XE; Commodore 64 & 128 (in C 64 mode); IBM PC and compatibles; and Color Computer. However, occasionally we have to omit versions when a program requires capabilities that some of these computers lack. For example, many Microtones programs can only run on computers that have three voices, which eliminates the Apple II series; IBM PC and compatibles (except the PCjr with Cartridge BASIC and the Tandy 1000); and Tandy Models III, 4, and Color Computer.

In addition, we publish at least one program each issue for the Adam, Macintosh, Tandy Models III/4, TI-99/4A, and VIC-20. In the future, we also hope to cover the Atari 520ST and the Amiga. This month, these programs can be found here in The Programmer and in Compucopia (in the K-POWER section of FAMILY COMPUTING).

**1-800-345-5080**

# FUNCTION KEYS IN YOUR BASIC PROGRAMS

## A TUTORIAL FOR INTERMEDIATE PROGRAMMERS

BY JOEY LATIMER

Many computers have special keys that, unlike other keys, normally have no effect when pressed. These keys are usually called "function keys" because they can be programmed to carry out preassigned functions. In a game program, for instance, you may be instructed to press a key called F1 or START to begin the game. In a word processor, you may be called upon to press a specific function key when you want to change the screen to a different color. Function keys can be assigned almost any task by creating programming routines that are activated each time a certain function key is pressed.

While most computer manuals don't deal with the programming of function keys, it can be a very useful technique and is relatively easy for most programmers to master.

The following tutorial discusses the programming of function keys for Atari, Commodore 64 and 128, IBM PC and compatible, and Tandy Model 4 computers. In order to get the most out of this tutorial, you should first have a basic understanding of the use of GOSUB, GOTO, IF ... THEN, and PRINT statements. In addition, Atari and Commodore owners should be familiar with GET, PEEK, and POKE, and owners of PC compatibles and Model 4s should know the INKEYS command.

### DEMO PROGRAMS

A *Function Key Demo* program has been included for each computer to demonstrate how function keys are programmed on different machines. Type the program into your computer, SAVE it, and then RUN it. You will be instructed to press a function key, or "Q" to quit. Once the computer senses that a function key has been pressed, it will display the name of the pressed key on the screen and will change the color of the screen border (except on the IBM PC and compatibles with monochrome monitors and the Tandy Model 4).

Once you understand how the program for your computer works, try modifying it so that when a function key is pressed, the program performs some other function or jumps to your own routine.

### ATARI 400/800/XL/XE

The Atari 400/800/XL/XE series features three function

# Taxes prepared

## ...at the push of a button.

Even if you know nothing about income tax law this new up-to-date software program takes the home computer owner step by step to a 100% accurate tax return in a format ready to file with the I.R.S.

This year byte back with **TaxByte**, the interactive software program from **Taxware Inc.**, the people changing the way Americans prepare their tax returns. To order or for more information call:

## The Educated Choice

Brown Disc, a technological leader in the diskette industry, understands that computer literacy is a growing concern for all of us, no matter what age or walk of life. SCHOLAR allows you to make THE EDUCATED CHOICE. In addition to providing you a quality diskette, we provide the tools to become a better educated computer user. With the purchase of a single ten pack of SCHOLAR diskettes, Brown Disc will provide you with an Educational Starter Kit to make your computer use more stimulating and fun.

**Scholar's Educational Starter Kit Gives You  
Value For Your Diskette Dollar!**

**Free Software    Free Paper  
Free Teaching Aids**

keys that can be used in your BASIC programs. These keys are called OPTION, SELECT, and START.

The normal way of checking to see if a key has been pressed is to PEEK, or check, the value in memory location 764. When "Q" is pressed, PEEK(764) has the value 47 (see line 60). Unfortunately, pressing a function key doesn't affect the value of PEEK(764).

To check for a function key, PEEK memory location 53279 (see line 70). If the value found in memory location 53279 is 3, then the OPTION key is being pressed. If the value is 5, then SELECT is being pressed. And if the value is 6, then START is being pressed (see lines 80-140).

(NOTE: The Atari can also detect two or three function keys being pressed at the same time. If both the OPTION and SELECT keys are pressed together, for example, then the value in memory location 53279 will be 1. For the values of the other key combinations, see lines 80-140.)

Once a function key has been pressed, the color of the screen border is changed in line 110 by POKEing the value of K\*10 into memory location 712. K is the value of the function key returned in line 70 (0 to 6), and the screen border is changed by POKEing 0 to 60 into location 712 (the range of legal values is 0 to 255).

If you want to jump to new program lines when function keys are pressed, then you will have to change lines 80-140 to read:

```
80 IF K=1 THEN (line number)
```

If you want to jump to subroutines, then lines 80-140 would look like this:

```
80 IF K=1 THEN GOSUB (line number of
subroutine) :GOTO 160
```

You can use the same technique to test for any of the other key combinations.

## Atari 400/800, 600/800XL, & 130XE/Function Key Demo

```
10 PRINT CHR$(125):POSITION 4,1
20 PRINT "--FUNCTION KEY DEMO PROGRAM--"
30 PRINT :PRINT "PRESS ANY FUNCTION KEY"
40 PRINT "AND I WILL TELL YOU WHICH ONE"
50 PRINT "YOU PRESSED. PRESS <Q> TO QUIT.":PRINT
60 IF PEEK(764)=47 THEN POKE 764,255:END
70 K=PEEK(53279)
80 IF K=0 THEN PRINT "<START>+<SELECT>+<OPTION>":GOTO 160
90 IF K=1 THEN PRINT "<SELECT>+<OPTION>":GOTO 160
100 IF K=2 THEN PRINT "<START>+<OPTION>":GOTO 160
110 IF K=3 THEN PRINT "<OPTION>":GOTO 160
120 IF K=4 THEN PRINT "<START>+<SELECT>":GOTO 160
130 IF K=5 THEN PRINT "<SELECT>":GOTO 160
140 IF K=6 THEN PRINT "<START>":GOTO 160
150 GOTO 60
160 POKE 712,K*10
170 IF PEEK(53279)=K THEN 170
180 GOTO 60
```

## COMMODORE 64 AND 128 (C 64 MODE)

The C 64 has four physical function keys, labeled F1, F3, F5, and F7. If SHIFT is held down while these keys are pressed, then they become F2, F4, F6, and F8. This means that the C 64 keyboard acts as if it had eight different function keys.

The easiest way to check whether a function key has been pressed is to use the BASIC keyword GET (see line

60). When the computer executes the GET statement, it stores the value of any key currently being pressed in the specified string variable. In the demo program we call this string KS. Normally, we check whether a particular key has been pressed by comparing the value of KS to the character, or key, we expect (e.g., IF KS="A" THEN ...).

We check for function keys the same way. However, since the function keys don't have corresponding characters that display on the screen, we have to specify them by their ASCII values. The values for the function keys are 133 through 140. We convert these values to "characters" using the CHR\$ (character string) function; and we compare KS to every one of these special function-key characters in lines 90-160. (The ASCII values for every key are listed in the back of the programming manual that came with your C 64.)

If lines 90-160 establish that a function key has been pressed, then the number of the function key pressed (F1-F8) is displayed on the screen and the number of the function key is assigned to the variable FK. The value of FK is then POKEd into location 53280, which changes the color of the screen border (line 160). (The range of legal values for screen border color is 0 to 15.)

If you want to jump to another program line when F1 is pressed, then change line 70 to read:

```
70 IF KS=CHR$(133) THEN (line number)
```

If you want to jump to a subroutine when F1 is pressed, you can change line 70 to:

```
70 IF KS=CHR$(133) THEN GOSUB (line number of
subroutine) :GOTO 60
```

You can use the same technique to test for any of the other seven function keys.

## Commodore 64 & 128 (C 64 mode)/Function Key Demo

```
10 PRINT CHR$(147)
20 PRINT TAB(6);"FUNCTION KEY DEMO PROGRAM"
30 PRINT:PRINT "PRESS ANY FUNCTION KEY"
40 PRINT "AND I WILL TELL YOU WHICH ONE"
50 PRINT "YOU PRESSED. PRESS <Q> TO QUIT.":PRINT
80 GET KS:IF KS="Q" THEN POKE 53280,254:END
90 IF KS=CHR$(133) THEN PRINT "<F1>":FK=1:GOTO 180
100 IF KS=CHR$(134) THEN PRINT "<F3>":FK=3:GOTO 180
110 IF KS=CHR$(135) THEN PRINT "<F5>":FK=5:GOTO 180
120 IF KS=CHR$(136) THEN PRINT "<F7>":FK=7:GOTO 180
130 IF KS=CHR$(137) THEN PRINT "<F2>":FK=2:GOTO 180
140 IF KS=CHR$(138) THEN PRINT "<F4>":FK=4:GOTO 180
150 IF KS=CHR$(139) THEN PRINT "<F6>":FK=6:GOTO 180
160 IF KS=CHR$(140) THEN PRINT "<F8>":FK=8:GOTO 180
170 GOTO 80
180 POKE 53280,FK:GOTO 80
```

## COMMODORE 128

The C 128 uses the function keys differently than the C 64. They can not be used to branch to a different part of a program as in the C 64. Instead, character strings are assigned to the function keys using the KEY command. After the keys have been assigned, pressing the function keys passes the strings to BASIC as if you had typed them at the keyboard. These keys can then be used to branch to a different line or subroutine if a certain string is received.

For example, to define F1 to your name you would type: KEY 1,"YOUR NAME"+CHR\$(13)

This method can be used to assign to the C 128 function keys the ASCII values of the C 64 function keys. This

can be done by adding the following lines to the C 64 program:

```
60 FOR X=1 TO 7 STEP 2:KEY X,CHR$(132+(X+1)/2)
70 KEY X+1,CHR$(136+(X+1)/2):NEXT X
```

## IBM PC AND COMPATIBLES

Most PC compatibles have 10 function keys labeled F1 to F10. These keys are usually "active" when a BASIC program isn't running, with commands like RUN and LIST preassigned to them. In line 10, KEY OFF takes the preassigned key "signs" off the bottom of the screen to avoid confusion while the demo program is running.

In line 60 of the demo program, KEY(X) ON, where X is equal to 1 through 10, is used to tell the computer that the function keys, F1 to F10, will be used in the program. In lines 70 to 160, ON KEY(X) is used to tell the computer where to go if any of the function keys are pressed. The computer only needs to see these lines once in a program; thereafter, whenever a function key is pressed, the computer will know exactly where to go. For example, any time F1 is pressed, the computer will automatically execute the subroutine at 1000.

In the *Function Key Demo* program, when a function key is pressed the program jumps to a subroutine that prints the name of the function key and changes the color of the screen border using COLOR (see the subroutines in lines 1000-10000). (NOTE: On computers with monochrome monitors, you will not see a color change.) Unlike the Atari and C 64, which have the option of using GOTOS or GOSUBS, on the PC and compatibles the program MUST jump to a subroutine when a function key has been pressed. Try replacing the subroutines in the demo program with your own.

Lines 170 and 180 are a loop. Line 170 checks to see if some key other than a function key has been pressed. When a "Q" is pressed, the computer will reset the screen border color and then END. And when a function key is pressed, the computer will interrupt any other part of the program it happens to be working on and jump to the appropriate subroutine.

(NOTE: This method can also be used for certain other key combinations besides the function keys. For more information, see the ON KEY and KEY statements in your BASIC manual.)

The IBM PC and compatibles also let you use two-key combinations, such as SHIFT and F1 or ALT and F4, in your programs. Checking for these combinations is done using the INKEYS command instead of the ON KEY(X) command. For more information, look up Extended Codes in your BASIC manual.

The IBM PC and compatibles also give the ability to define any of the function keys as a string of up to 15 characters that will be acted upon by the computer just as if you had typed it on the keyboard yourself. For example, to make F1 print your name each time it is pressed, use the following command:

```
KEY 1,"YOUR NAME"+CHR$(13)
```

The CHR\$(13) at the end tells the computer to "press the ENTER key" for you.

The operating system does not allow the use of both methods at the same time in a program. The KEY(X) ON command, line 60 of *Function Key Demo*, automatically turns off all of the pre-assigned definitions. The definitions will only be active after giving the computer a KEY(X) OFF command.

## LEARN PROGRAMMING

### MASTER COMPUTERS IN YOUR OWN HOME

Now you can write programs and get a computer to do just what you want. Get the most out of any computer, and avoid having to pay the high price of pre-packaged software.

### LEARN AT YOUR OWN PACE IN YOUR SPARE TIME

Our independent study program allows you to learn about computers, operations, applications and programming in your spare time, at home. Our instructors provide you with one-on-one counseling.

### LEARN EVEN BEFORE YOU DECIDE ON A COMPUTER

Everything is explained in simple language. You will enjoy learning to use a computer—EVEN IF YOU DON'T OWN ONE. Learn to program on any personal computer; IBM, APPLE, COMMODORE, TRS, and more.

### BE YOUR OWN COMPUTER EXPERT

Programming is the best way to learn to use computers, and we can show you the best—and most economical—way to learn programming! Send today for your free information package. No obligation. No salesman will call.

```

## TANDY MODEL 4

The Tandy Model 4 has three function keys, labeled F1, F2, and F3. The familiar INKEYS statement, normally used to check for standard keys, can also check to see if one of these three function keys has been pressed.

In line 60, the computer stores the value of any key currently being pressed in a string variable named K\$. Normally, we check whether a particular key has been pressed by comparing K\$ to the character, or key, we expect. For example, in line 60, if K\$ is equal to "Q", then the program ends.

We check for function keys the same way, except that, since the function keys don't have corresponding characters that display on the screen, we have to specify them by their ASCII values. The values for F1, F2, and F3 are 129, 130, and 131, respectively. In lines 70-90, we convert these values to "characters" using the CHR\$ (character string) function; and we compare K\$ to these special function-key characters. If a function key has been pressed, then the name of the function key is printed on the screen.

To jump to new line numbers when function keys are pressed, change lines 70-90 to:

```
70 IF K$=CHR$(129) THEN (line number)
80 IF K$=CHR$(130) THEN (line number)
90 IF K$=CHR$(131) THEN (line number)
```

If you want to jump to subroutines when function keys are pressed, change lines 70-90 to read:

```
70 IF K$=CHR$(129) THEN GOSUB (line number of
subroutine) :GOTO 60
80 IF K$=CHR$(130) THEN GOSUB (line number of
subroutine) :GOTO 60
90 IF K$=CHR$(131) THEN GOSUB (line number of
subroutine) :GOTO 60
```

## Tandy Model 4/Function Key Demo

```
10 CLS
20 PRINT TAB(16);"-FUNCTION KEY DEMO PROGRAM-"
30 PRINT:PRINT "PRESS ANY FUNCTION KEY"
40 PRINT "AND I WILL TELL YOU WHICH ONE"
50 PRINT "YOU PRESSED. PRESS <Q> TO QUIT.":PRINT
60 K$=INKEY$:IF K$="Q" OR K$="q" THEN END
70 IF K$=CHR$(129) THEN PRINT "<F1>":GOTO 60
80 IF K$=CHR$(130) THEN PRINT "<F2>":GOTO 60
90 IF K$=CHR$(131) THEN PRINT "<F3>"
100 GOTO 60
```

## TANDY MODEL 4 (MODEL III MODE)

The function keys on the Model 4 (Model III mode) can serve as "user-defined" keys to perform special functions. Once the keys have been assigned, the computer will react as if you typed the alternate key instead of the function key. In order to redefine the function keys, POKE the ASCII value of the character you want into the memory location of the function key.

To redefine F1, for example, to erase a line, type:

```
POKE 16875,10
```

To redefine F2 to ASCII 29, type:

```
POKE 16876,29
```

To redefine F3 to ASCII 28, type:

```
POKE 16883,28
```

This method can be used to move certain operations such as moving the cursor to the upper-left corner, to a function key instead of the three key combination of SHIFT, "↓" (down arrow), and "," (comma).

(NOTE: The function keys will not act as "user-defined" keys when the Tandy Model 4 is in Model 4 mode.)

## FOR THE COMPUTER GENERATION

### Mailman Turned Hacker Wins Activision's *GameMaker* Design Contest and \$5,000!!!

You are an intruder lost in a major compound that protects a master computer. Your mission: Wind your way through a maze of rooms in search of the main computer room and force a system shutdown before the master computer takes over the world. Along the way, you'll encounter patrol guards, intruder detectors, and computer lasers that can stop you from saving the world. Can you complete the mission before your deadline?

This exciting game, called *The Final Attempt*, is the creation of Cleophus W. Davis III, the grand-prize winner of Activision's *GameMaker* Design Contest. Activision held the contest last spring to see who could come up with the best game design using *GameMaker*, a program that allows you to integrate graphics, music, and animation to design your own arcade game. The submissions were judged by *GameMaker*'s designer, Garry Kitchen, and his staff. They evaluated the strategy, music, and graphics, and looked for entries that incorporated original work as well as the preprogrammed *GameMaker Library* of music and graphics choices. Cleophus used only one character (the explosion sprite) from the *Library* and programmed the rest himself. His music, characters, scenery, and control grid were all as original as his excit-

**Cleophus Davis with his prize-winning game, *The Final Attempt*.**

ing game strategy.

Cleophus, a 27-year-old mailman from Hayward, California, became interested in computers more than two years ago when he received a C 64 for Christmas. Cleophus upgraded to a C 128 and his assortment of game software grew to a collection worth \$2,000. He learned to program and played all types of computer games to gain a perspective on how they work and what makes them fun to play. All of this inspired Cleophus to design *The Final Attempt*, and now he is teaching himself assembly language to use in future programming projects.

Cleophus's devotion to gaming paid off. As the grand-prize winner of Activision's *GameMaker* Design

Contest, he had his game published and spent a day at Activision. There, he got a grand tour of the software company, met with several software producers and designers, and attended a party in his honor. At the party, Activision President Jim Levy presented Cleophus with a check for \$5,000! When asked what he would do with the money, Cleophus said, "I want to buy an Amiga, but I don't think my wife will go for it. We'll probably save the money and buy a house."—KAREN KANE

NOTE: To receive a copy of *The Final Attempt*, send \$5 to cover shipping and handling to *GameMaker's Winning Disk*, Activision, P.O. Box 7287, Mountain View, CA 94039.

# STRATEGY

## TIPS, TRICKS, AND HINTS

### RINGS OF ZILFIN

SSI. Fantasy/Role-playing. Your mission: Locate and reunite the lost rings of Zilfin and rid the world of the evil wizard, Lord Dragos. (The hints and game are for the Apple II series and C 64/128.)

🔑 The beginning of the game can be very frustrating because a character's sword skill starts out so low. A fast and easy way to increase this ability is to shoot all monsters with your bow until they can be killed with one blow of your sword. (Sword skill doesn't automatically increase when you kill a villain with your sword, but it's worth your while to increase sword skill as much as possible because a sword can do far more damage than a bow.)

Should you fight or flee (top)? A helpful beggar (bottom)?

🔑 Purchase a suit of heavy armor early in the game. If you're wearing armor, the majority of monsters in Deloria can't touch you; this makes the first part of your quest much easier.

🔑 There are two ways to gather the 800 gold pieces necessary to buy

heavy armor. You can travel back and forth from Telbiz to Ziad, looting the temples you find and picking mushrooms to keep your endurance up. (This is the slow way.) Here's a faster way: First, travel back and forth between Telbiz and Ziad until you have four Parzin and four Purlet mushrooms. Then, buy as much tobacco as you can from the merchant in Telbiz. Eat two of each mushroom and travel west through the Feldor Forest, battling the dreaded K-plants. (The mushrooms will give you an easy victory.) When you arrive in Perimon, sell all of your tobacco to the merchant, and you'll make a terrific profit. This journey can and should be repeated many times before you venture out into the rest of the forbidding world. After you have purchased the armor, you can make this same run for extra gold, toys, or a visit to the healers.

🔑 If you're using the Apple version, never try to kill the monsters that the night birds summon unless you're lucky and a very good shot. Flee and miss a night's sleep rather than wear yourself down against the magic of the flying monsters.

🔑 Beggars have interesting friends. A generous gift may loosen their tongues.

🔑 Do not even think of entering the Dark Tower or Castle Graz without the staff of the Grumm Tree.

🔑 On the first level of the Dark Tower, enter the passage on the right and follow the eastern wall. It will guide you past any monsters and through the door to the up staircase. On the second level, after leaving the room with the Fermigons, follow the second corridor leading south. Head east as soon as you can and stick close to the north wall. You'll find the door to the second staircase. Go up that staircase. On level three, go east from the first fork you find. Continue going north until there is a branch to the west. Follow this passage and turn north as soon as possible. This corridor will lead you to the door to the last staircase, which you'll go up. On lev-

Be sure to buy some armor (top), and stay away from the K-plants (bottom)!!!!

el four, journey as far south as you can possibly go. Find a passage leading east near the bottom of the maze, and this will lead you to the room holding King Roland.

🔑 In the entrance chamber of Castle Graz, go through the eastern exit and follow the corridor all the way to its end. Just before the dead end is a short western corridor: Head down it and turn south as soon as you are able. Go up the staircase. On the second level, move about one square south from the staircase. Follow the corridor all the way west. Then go all the way south and enter the passage on the south wall. This leads to the staircase. On level three, follow the passage east and then go north. Walk past the intersection via the east-west corridor and turn east at the next opportunity. On the fourth level, as soon as you exit the stairs, you'll see a long east-west corridor with many branches going south. Follow the second branch south, and midway down there will be an alcove on the left where Drago awaits.—JEFF DONAHUE, 18, Bronx, New York

# NUMBER ONE ARCADE HITS...

## FOR YOUR COMPUTER.

Put on your black belt and challenge your friends or the computer through nine picturesque settings in this leading Martial Arts Game to become the **KARATE CHAMP**. For the Commodore 64™/128 and the 48K Apple II® Series.

As the crack shot **COMMANDO**, battle overwhelming odds to defeat advancing rebel forces. Armed with only a machine gun and hand grenades, you must break through the enemy lines to reach the fortress. For the Commodore 64™/128.

Prepare for the fight of your life... you are the **KUNG-FU MASTER**.\*\* Battle the evil forces through the five dangerous floors in the wizard's castle to rescue the captive fair maiden. For the Commodore 64™/128 and the 48K Apple II® Series.

## TRINITY

Infocom. Text adventure. Your mission: Escape World War III by entering a strange dimension and save the world. (*The hints and game are for Amiga, Apple, Atari, C 128, IBM PC & compatibles, and Macintosh.*)

- You can't walk across the grass, but if you roll . . .
- To keep rolling, you'll need a sail of some sort. A parasol might do nicely.
- White doors are a gateway to a different world.
- There is a vertex without a gnomon somewhere.
- The ring at the vertex opens and closes doors.
- A magpie can say only what it hears.

➤ To trap the skink between the lamp and the splinter, leave the lamp in the middle underground room and put the splinter in the crevice.

➤ Keep the skink in your pocket.

➤ Going through a pergola loop—or a Klein bottle—reverses directions (east = west).

➤ To get across the chasm, chop the tree and push it north.

➤ Can't open the crypt? Use a long lever.

➤ The corpse, if searched fully, will reveal everything needed to cross the river.

➤ A skeleton key can be found with a skeleton.

➤ You'll need water to cool off the magnet. You can carry water

when it's frozen, but to keep it from melting, take it to the highest elevation.

➤ The only source of milk is the coconut. You can't get the coconut, but a friendly sea-dwelling mammal can.

➤ You can open the coconut with the axe.

➤ A bubble is a perfectly good spacesuit. Get in the soap dish.

➤ The magnet will get you home when you are in the bubble in outer space.

➤ Keep the lemming in the cage.

➤ If you give the little girl a gift, she will fold the rice paper into a magic bird.—THE SPECIAL KS

## H I N T H O T L I N E

**AMAZON**, Telarium, a division of Spinnaker (Apple, Atari ST, C 64, IBM PC & compatibles, Macintosh). Text/graphic adventure. Your mission: Explore the Amazon and find the lost city of Chak.

➤ When you are out in the river, hit the alligators with the oar to chase them away.

➤ When you get to the bridge, show the gun to Paco.

➤ You cannot take Paco across the bridge if he is tranquilized because he will go into convulsions. Instead, threaten to tranquilize him, and he will cooperate.

➤ Go east across the bridge and then go south until you get to a tree with skulls on it. Walk west from the tree and you should arrive at the entrance to the Lost City of Chak.

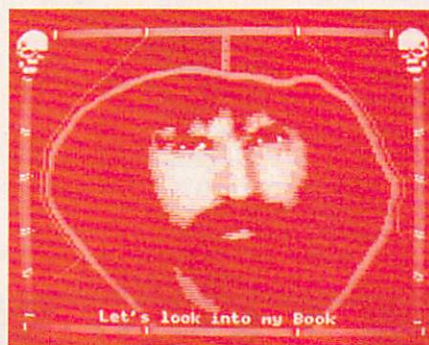

—KRIS BEELER, 11, Kent, Washington; SCOTT FISHER, 16, Lyndon, Kansas

**THE PAWN**, Rainbird, distributed by Firebird (Amiga, Apple [text only]; Atari ST, C 64/128, IBM PC & compatibles). Text/graphic adventure. Your mission: Discover why you have been brought to the mystical land of Kerovnia and find your way out.

➤ To get light: Cover the wrist band with your shirt before entering the guru's hut. There is water to the north, if you know what form to expect. After the guru gives you his advice, go to the clearing and see what's there.

➤ To get past the boulder, tie the rake to the hoe with your shirt. Level the boulder. However, the next rockpile must be overcome by different means.—JEREMY DOBRICK, 15, Wayne, Pennsylvania

**MOEBIUS, THE ORB OF CELESTIAL HARMONY**, Origin Systems (Apple). Strategy/Role-playing. Your mission: Defeat the evil Kaimen using your martial arts and swordsmanship skills.

➤ Aim high at warlords; it's your only chance.

➤ When traveling in the jungle, always have your sword ready to swing at tigers and tall grass. But when you're inside the fortress, put it away, because karate works better.

➤ When night falls, get behind a locked door. But do look out, because assassins throw shurikens over walls.

➤ Watch out for guards and assassins that come out of the water.—MICHAEL MINNICH, 11, Arlington, Virginia

We're looking for a few good hints! Send us hints for your favorite games, and, if we publish them, we'll pay you \$10. (We have all *The Bard's Tale*, *King's Quest I and II*, *Wizardry*, and *Ultima I, II, III*, and *IV* hints we can handle.) Send your hints to Hint Hotline, c/o K-POWER, 730 Broadway, New York, NY 10003. Sorry, but because we get so much mail, we can't acknowledge your letters unless we decide to publish your hints.

The following programs are brought to you by an incredible series of events.

ming, diving, gymnastics and skeet shooting, just to name a few.

### SECOND GUESSER

You are Captain Quirk of the starship Extrafries. Enemy Stickons have devised a scheme to destroy the entire universe. Fate is in your hands, and the only chance you have of countering the attack is to activate a neutralizer shield at the exact second they charge. Luckily, you have the *Second Guesser* program, which can tell you how many seconds away the universe is from the wrath of the Stickons, but you can't find Mr. Clock or a stopwatch.

To save the universe, type in and RUN the *Second Guesser* program and try to count out the number of seconds printed at the top of the screen. Begin your countdown when the word Go!!! appears and press the space bar to activate the shield. If you are more than half a second off, the universe will be destroyed. Count carefully—and live long and prosper!

—K.K.

K-POWER's editor and the SPECIAL K trio (Jeff, Greg, and Sasha) get so much mail from readers that some visitors mistake the FAMILY COMPUTING offices for the local post office. Mail boxes, desks, chairs, shelves, and the floor are piled high with all sorts

of fun letters from all types of entertaining people.

There's only one thing boring about the mail they get. The envelopes!! **Judy Ihlenfeldt**, of Waterloo, Indiana, decorates her envelopes (she sends lots of mail) with frog and owl stickers, and a few other readers brighten up their mail with colorful drawings. But, for the most part, the envelopes that K-POWER gets are dull, boring, and repetitious. Just looking at the white mountains of envelopes makes the mailman yawn.

Here's a challenge for you. For this month's contest, your mission is to liven up the FAMILY COMPUTING office

by decorating an envelope with a computer-related drawing! It's a weird idea for a contest—but what a blast!! Draw, scribble, paint, print, or do whatever on your contest-entry envelope. Be creative. Be crazy. Help the K-POWER clan look forward to its mail. Send your legible envelope entries (enclose the contest entry below) to K-POWER, 730 Broadway, New York, NY 10003, before March 31. Don't get too carried away and scribble across our address because the mailman won't deliver your letter! The SPECIAL KS will award \$10 apiece for the three envelopes they like most.

Name \_\_\_\_\_ Birthdate \_\_\_\_\_  
 Address \_\_\_\_\_  
 City \_\_\_\_\_ State \_\_\_\_\_ Zip \_\_\_\_\_  
 What computer(s) do you own (make and model)? \_\_\_\_\_  
 What do you like most about K-POWER? \_\_\_\_\_

## If you feel like a lost soul when it comes to music software, get the bible.

Almost every bit of music software you could possibly want or need can now be found in a unique single source: Coda, the bible of music software.

Detailing over 500 items which range from software to accessories to books, Coda is a remarkably user-friendly catalog that takes the confusion out of searching for the right music software. It's the computer-using musician's best

resource today. In fact, if you can't find what you need in Coda, chances are it doesn't exist.

Order Coda today for only \$4.00, by simply calling the number below. Or write to: Wenger Corp., 555 Park Drive, Dept. F2, Owatonna, MN 55060. It's not only inspirational, it's divine guidance.

**Coda. 1-800-843-1337.**  
 All major credit cards accepted.  
 Or call collect 1-507-451-1951.  
 CIRCLE READER SERVICE 57

# SOFTWARE GUIDE

## SPECIAL: A CHANGE IN THE RATINGS

Welcome to FAMILY COMPUTING's Software Guide. We have a special announcement for this issue: A revision in our ratings formula. Up to now, our software evaluations have spanned a range of four levels—poor, average, good, and excellent—in all but one of the categories below (not in "Ease of use"). Now we're adding a fifth level: very good.

With this revised system, you'll most probably be seeing fewer good and excellent ratings, since the addition of a very good rating was designed to accommodate qualities that are better than good, but are not quite excellent.

Here's how the new rating system works:

★★★★ Excellent. Outstanding. Truly superior.

★★★ Very Good. Of high quality.

★★ Good. Well-done, with few flaws.

★ Average. We've seen better, we've seen worse.

○ Poor. An empty circle, for not much there.

## Climb higher, faster in the Air Force.

As an Air Force officer your career will take off. You'll quickly get management experience that could take years to acquire in civilian industry.

As an Air Force second lieutenant, you'll manage people, projects and offices; you'll be in charge, making decisions, shouldering the responsibility. You'll belong to an organization dedicated to achievement, innovation and high technology.

And as an officer you'll have the satisfaction of

knowing that your work makes a difference to the Air Force and to your country.

Find out if you qualify. See your Air Force recruiter or call toll-free 1-800-423-USAF (in California 1-800-232-USAF). Better yet, send your resume to HRS/RSAANE, Randolph AFB, TX 78150-5421.

Aim High. Be an Air Force Officer.

# SOFTWARE REVIEWS

On the following pages, you'll find in-depth reviews of some of the programs listed in the Software Guide. Refer back to the Guide on page 82 for information such as backup policies and addresses of software publishers.

## EDUCATION/ FUN LEARNING

### Type!

HARDWARE REQUIREMENTS: 64K Apple, C 64/128, IBM PC/PCjr.

PUBLISHER: Broderbund Software

PRICE: \$40-\$50

PUBLISHER'S SUGGESTED AGES: 12 +

If you want to compute, you've got to type, but even an hour a day of "asdf jkl;" or "the quick brown fox" is more than most can stand. Fortunately, typing education has taken a turn for the better with boredom-free software called *Type!*

Beginners lead off with the Introducing the Keyboard and Keyboard Basics sections, which teach the home keys ("asdf jkl;") for each finger and let you practice. Each letter flashes when you're supposed to press it. The program lets you know when you should move on to the next lesson, but you can select your own pace if you prefer. Once you've absorbed the fundamentals, you move on to the Build Speed and Accuracy section. Finally, Special Exercises helps you smooth out rough spots in your technique. No matter what lesson you're on, *Type!* posts your average speed, accuracy percentage, goals, and problem areas. Our children especially liked seeing their best scores in lights at the end of each session.

An important part of learning is assessing your progress. *Type!* provides graphs that show you which fingers are weakest, which are most accurate, what kind of problems you're making most frequently, and

so on. The program offers timed tests, too. You can enter your own text for any test, but with the entertaining selections provided, you may not want to. If you can't type fast enough to get to the end of the text in your allotted time, you won't find out the punch line to the story—an added incentive. Another incentive is packaged in *Type!-Athlon*, a typing game in which two animated characters race across the screen. The program stores high scores and test results so you can monitor your progress over a period of time.

*Type!* won't appeal to younger children, but teens and adults who want to compute more easily will find it much more entertaining than standard classroom drill.

—TAN A. SUMMERS

### Where in the U.S.A. Is Carmen Sandiego?

HARDWARE REQUIREMENTS: 64K Apple.

PUBLISHER: Broderbund Software

PRICE: \$45

PUBLISHER'S SUGGESTED AGES: 9 +

Carmen Sandiego and her V.I.L.E. gang of 15 desperados are on the loose again, this time in the good old U.S. of A. Your job, as a rookie detective with the Acme Detective Agency, is to hunt them down, one at a time. Help is provided by clues, a map, Carmen's scrapbook, and a copy of Fodor's U.S.A. travel guide. The time it takes to uncover each clue is limited, so there's a premium on strategy as you travel here and there following up leads and collecting information. If you can't finish a game in one session, you can save it for later. Or you can play a new game each time you sign on, starting in a new place, with a new villain, new clues, and a new scenario. Successes bring promotions (you don't want to stay a rookie forever!), but be careful: If you catch up with a gang member without first obtaining an arrest warrant, she or he will

escape, and all your labor will be lost. Also, if your warrant is for the wrong character, you may be charged with false arrest.

This delightful sequel to the best-selling *Where in the World Is Carmen Sandiego?* combines fun with learning as well as the original did, while you soak up lots of facts about the United States. The documentation is brief, though, and our kids had to learn some of the rules and strategy by trial and error, but those are easily ignored flaws in an otherwise excellent and challenging educational game.

—TONY MORRIS

## HOME BUSINESS & PRODUCTIVITY

### A-Plus

HARDWARE REQUIREMENTS: 256K IBM PC.

PUBLISHER: Savant Corporation

PRICE: \$90

Listen to comments from my teenagers:

"Best program I've ever seen."

"Incredible graphics!"

"Easy to use, and fun, too."

From such accolades, you might suspect that they were playing the latest high-res action game, but they were talking about *A-Plus*, an integrated word-processing and graphics package designed especially for family use.

Reasons for enthusiasm are not hard to find. The word-processing portion is tailored to high-school and college students, featuring such items as special character sets for Spanish, French, German, Italian, Greek, and mathematics/physics characters. Your files are arranged in "three-ring binders," and up to 50 binders and 300 files can be stored on a disk. For the beginner, icons and menus are available; but as you become more adept, you can substitute a full set of faster, one-letter

# SOFTWARE REVIEWS

commands. Other desirable features include an Undo function that reverses your most recent action. To help you avoid major disasters, backup files are automatically created whenever a file is deleted or modified.

And there's more. Not only a fine word processor, *A-Plus* is also a cursor-driven graphics program that permits freehand drawing as well as offering a clip-art library of 100 illustrations on disk. Drawings can be embellished with brush strokes, a pixel-by-pixel zoom mode, various fill patterns, and an optional background grid to aid in preparing graphs and charts.

And there's more. All drawings can be inserted into documents written on the word processor. Thus, graphs, charts, maps, and the like can be scaled down to an appropriate size and either printed on separate pages or placed alongside your text. (Words will wrap around the illustrations automatically.) This is a great feature for science or sociology reports, geography papers, and similar projects.

And there's more. Let's list the extras: a clock (with optional alarm), a calendar (with past, present, and future dates), and a five-function calculator (including square roots). Data from these three modules can also be incorporated into documents written with the word processor.

On the negative side, there's no spelling checker, and printing detailed graphics takes time ("but they were well worth the wait," according to 15-year-old Matt). Yet, these are trivial criticisms of an otherwise outstanding software package. As 18-year-old Anne noted, "I've never seen a word processor that is so thorough and easy to use at the same time."

And there's more. —TONY MORRIS

## PFS: Professional File

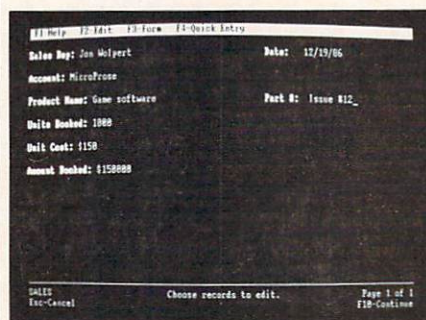

HARDWARE REQUIREMENTS: 256K IBM PC.

PUBLISHER: Software Publishing Corp.  
PRICE: \$249

If you want a business-quality data base that won't take forever to master, *PFS: Professional File* could be for you.

The philosophy behind this program is clear: Let the user do pretty much what he or she wants to do, and offer help every step of the way. Take form design, for instance. You move your cursor around the screen

and type in the names of the fields (categories) you want, ending each with a colon. Any field can be up to a full screen long, or as short as you

like, with more than one field allowed on each line. Need extra room? No problem—each record can run on for 32 pages, with up to 100 fields per page. And, if you want to make changes in your form, you can always redo it, even after you've entered information.

The program is ideal for organizing blocks of text, such as notes for a report or even a book. Unlike many data bases, *Professional File* lets you include a screenful of data in a single field. It will also sort records into lists by keyword, making it simple to organize notes. The printing functions are particularly good at handling text, or reports can be transferred to your word processor for editing and rewriting.

When working with numbers, you can create calculated fields that combine data from several other fields according to the mathematical formula you enter (using only addition, subtraction, multiplication, and division). A significant limitation here is that all the referenced fields must be on the same page of your on-screen form. When you're ready to prepare reports, you can use totals and subtotals, item counts, averages, and minimum and maximum values, and you can divide data into numeric ranges.

*Professional File* also includes a useful macro capability for replaying lengthy keystroke sequences automatically. It boasts good documentation and excellent context-sensitive help screens.

With its combination of flexibility, power, and ease of use, this program is highly recommended for handling statistical data and especially for managing text-heavy information.

—STEVE MORGENSTERN

### Ace of Aces

HARDWARE REQUIREMENTS: C 64/128.

PUBLISHER: Accolade

PRICE: \$30

REVIEWER'S SUGGESTED AGES: 8+

An air traffic controller couldn't keep track of all the aerial combat simulators on the market, but this one has a feature that makes it easy to spot. After mastering each of four arcade-style missions, experienced pilots can mix them in any combination. Veterans can even tackle all four in a single outing.

You begin by choosing one mission—knocking out Nazi bombers, V-1 rockets, a train, or submarines—and an appropriate arsenal of rockets, bombs, and cannon ammo. Then you climb into the cockpit of a Mosquito, a British fighter bomber. With only a few dials and gauges to scrutinize, anyone can master in

minutes the basics of flying the Mosquito. You press a key or use the joystick to switch between the forward perspective and views to the left and right sides. Also, there are screens that depict the bomb bay and a mission map with the current position of enemy targets and your plane flying over Europe.

In the air, you'll witness fast, smooth animation as enemy fighters materialize through layers of rolling clouds. Sound effects and special visual transitions between game phases dramatize the action. But it's not all eye/hand coordination, for success involves making correct decisions on your flight path, speed, altitude, and other realistic factors. At least you don't have to negotiate the most demanding part of flying (takeoffs and landings), because after loading up with weapons, the entire game takes place in the air.

# SOFTWARE REVIEWS

## World Games

HARDWARE REQUIREMENTS: Amiga, Apple, Atari ST, C 64/128, IBM PC/PCjr.  
PUBLISHER: Epyx, Inc.  
PRICE: \$30-\$40  
REVIEWER'S SUGGESTED AGES: 8+

Six of the eight events in this collection are truly exotic: Acapulco cliff-diving, the Scottish caber toss, barrel riding in the U.S., Japanese sumo wrestling, barrel jumping on ice skates in Germany, and Canadian log rolling. The others, slalom skiing and weight-lifting, have been seen in earlier computer games.

After choosing a country to represent, you compete in one or more events. A single-screen travelogue (which can be turned off) describes each sport. Then your animated character takes the stage in a stadium or other appropriate setting. You can control the difficulty level in each sport, such as the height at which you dive off the cliff. Visual indicators, such as bar graphs, appear in windows to provide pertinent information such as wind direction and speed.

An athlete's animated reactions depend on the outcome of the event. For example, a successful diver waves and smiles. But after a bad dive, he wipes his brow nervously. If you've beaten an existing record, your name and the new record will be saved to disk. Gold, silver, and bronze medals are awarded to the players with the highest cumulative scores, and current world records may be examined from the main menu.

Some events focus on timing, others on eye/hand coordination, but most require a combination of skills. Mood-setting melodies and sound effects enhance the sense of "being there," and the national anthem plays when you choose your country. Unfortunately, the anthems cannot be turned off, and they grow tedious after a few sessions. Otherwise, the

crisp graphics and variety of sports put *World Games* in the winner's circle.

—SHAY ADDAMS

## Amnesia

HARDWARE REQUIREMENTS: 64K Apple.  
PUBLISHER: Electronic Arts  
PRICE: \$45  
REVIEWER'S SUGGESTED AGES: 12+

I never thought I'd be washing windshields and panhandling for a living, but then I never expected to wake up in a New York City hotel and not even remember my name, either. That's what happened when I entered this absorbing text adventure in which the central puzzle is recovering your identity. Some people you meet will call you Xavier Hollings and others know you as John Cameron, but you're a dead man by any name unless you find out who framed you.

The search for clues unfolds in over 4,000 locations. Most of them are Manhattan street corners, and the entire New York City subway system is also programmed into the game. So are many of the Big Apple's tourist attractions, such as St. Patrick's Cathedral and Washington Square. Besides solving an assortment of object- and character-related problems, you must earn money and find a place to sleep. Otherwise you will pass out from exhaustion and come to in a hospital where the police nail you for murdering someone during a Texas jailbreak.

*Amnesia's* parser understands complete sentences and an extensive vocabulary of nouns, verbs, adjectives, and other parts of speech, smoothing the way for commands like "get the Gideon Bible and put it on the television." The two-disk package contains maps of the streets and subways, which eliminates the dreariest part of most adventures—drawing maps. The scoring system is unique, awarding points in three categories: detective, character, and survivor.

Rather than adapting one of his existing science-fiction or mystery novels, noted author Thomas M. Disch wrote *Amnesia* specifically for this medium. The result is interactive fiction's most literate and dramatic work to date. At times his prose spills vividly across several consecutive screens. The result is an adventure that's as compelling to read as it is challenging to solve.

—SHAY ADDAMS

## World Tour Golf

HARDWARE REQUIREMENTS: 256K IBM PC.  
PUBLISHER: Electronic Arts  
PRICE: \$50  
REVIEWER'S SUGGESTED AGES: 10+

While golf may not be America's favorite sport, the proliferation of golfing programs suggests its popularity is not restricted to executives or weekend television. The features found in *World Tour Golf*, which surpass every similar program to date, are a golfer's dreams come true.

From one to four gamers (with or without robot opponents) have the opportunity to play on a score of world-famous courses, each recreated in high-res detailed graphics. Using a complex and sophisticated ball-hitting system, each shot is calculated according to speed and angle of swing, strength, club-head angle, wind strength and direction, accuracy of aim, and terrain features. (Players can also opt for an easy one-key method.) The course hazards—sand traps, trees, the rough, water hazards, and others—play a major role in each game.

Each player chooses a golfer as an on-screen stand-in (just as in a role-playing adventure), and the stats for each character can be adjusted for play balance between duffers and those with low handicaps. This is just the beginning, though, for *World Tour Golf* also offers a great golf-course construction set.

You can make such simple changes to existing courses as rearranging the order of holes. Then go on to make minor adjustments in a single hole or an entire course, or go all the way and design your own holes or complete courses from scratch. Imagine a 2,000-yard hole with 20 water hazards! The sky's the limit here, and with this easy-to-use design system, the work is as much fun as, and even more varied than, *Pinball Construction Set*.

—JAMES DELSON

# CAMPS

## AN OPPORTUNITY UNLIKE ANY OTHER

The nation's largest computer camp offers all traditional camping activities and camaraderie in a beautiful setting. Your child will have exclusive use of a major brand microcomputer for at least 6 hours every day.

An experienced staff ratio of one to three and a computer ratio of one to one uncaps the creativity of young people. Students receive hands-on experience in robotics, graphics, color, sound, languages and telecommunications.

Complete details on the 1, 2, 4, and 8, week coed sessions for ages 8-18 are available in a free brochure. Call or write for yours!

Call (317) 297-2700 or write to  
MIDWEST COMPUTER CAMP  
9392 Lafayette Road, Unit C3, Indianapolis, IN 46278

# NEW PRODUCTS

## MANUFACTURER'S ANNOUNCEMENTS

"New Products is a monthly feature consisting of paid announcements. More information about the products can be obtained by circling the corresponding reader service number. For rate information or call 212-505-3587. Publisher reserves the right to edit or reject all announcements."

## The Home Money Manager

A PC/MS-DOS version of the Home Money Manager (HMM) is now available from Homecraft Computer Products for \$59.95. The CP/M version of this software has been available since early 1985 and the reviewers have been calling it the easiest to use, full-featured home financial manager available.

Checking, savings, cash and credit transactions can be budgeted and tracked using 24 sep-

arate registers. Plus, HMM has two editors allowing you to change entries as you are making them, or at any time after you've completed the entry. Other features include search functions (by check number, budget category, payee name or date), a full complement of printed reports, plus HMM can store a complete year's worth of financial data on a single disk.

HMM is not copy protected. HELP screens are available at every prompt, and it comes with an easy to read manual. Plus, HMM is the only software with telephone support available on weekends! Call (503) 692-3732 for more info.

# DESK-ADAPTOR™ CONVERT YOUR DESK TO A COMPUTER WORK STATION

## Why buy expensive computer furniture for home or office?

- Convert any desk or table into a computer work station.
- The Desk-Adaptor™ keyboard holder lowers keyboard height to optimum keying height for maximum comfort and productivity.
- Installed and removed in seconds without tools. Easily stored when not in use.
- Padded clamps won't mar desk or table surfaces.
- Accommodates all keyboards up to 9.5 inches deep.

\$27 plus \$3 shipping. MN residents add 6% sales tax.

**Appro-Tech, Inc.**  
4201 Brookside Avenue  
St. Louis Park, MN 55416

## READER SERVICE FREE INFORMATION

Readers are invited to learn more about our advertisers' products. This is a free service to FAMILY COMPUTING readers. Follow the directions below and the materials will be sent to you promptly and free of charge.

1. Circle the number(s) on the card that corresponds to the key number appearing on the advertisement. For advertisements with no number, please contact your local retail outlet or write to the address listed.
2. Simply mail the card. Postage is necessary. The literature you requested will be mailed to you directly, free of charge by the manufacturer.
3. Print or type your name and address on the attached card. To receive the requested information, answer all questions on the reader service card.
4. Circle number 138 on the reader service card if you wish to subscribe to FAMILY COMPUTING. You'll be billed for 12 big issues for only \$19.97.
5. Do not use the card for change of address. Please use the subscriber service form in the magazine.

# Face to Face with Excitement!

F-15E Strike Eagle Fighter

Apache AH-64A Helicopter Gunship

World War Two Fleet Submarine of the Silent Service

There is one sure way to come face to face with the excitement of action: the stunningly realistic combat simulators of MicroProse. Authenticity is the key element that separates mere videogames from today's sophisticated simulations—it's the quality of realistic action that takes you from the world of mere fantasy and into an intriguing realm of spectacular reality. Authenticity is the essence of the MicroProse design approach; excitement is the undeniable result.

**F-15 STRIKE EAGLE.** The reference standard attack fighter simulation. Totally authentic cockpit flight controls and weapons systems. Missions over Iraq, Egypt, Southeast Asia—even the famous April 1986 Antiterrorist Airstrike against Libya. So realistic Soviet intelligence has reportedly purchased copies for analysis.

**GUNSHIP.** Helicopter warfare over the high-tech battlefields of tomorrow's headlines, with night vision systems, superb terrain representation for true 'nape of the earth' flying, and the full array of America's most advanced weaponry at your fingertips. Authentic enough to be used in actual helicopter combat environment testing for the United States Army.

**SILENT SERVICE.** A tribute to the cunning and courage of America's World War Two submariners. Stunningly accurate recreation of undersea warfare, with accurately reproduced torpedo characteristics, radar and sonar capabilities, and destroyer defensive tactics. So authentic that it charts the entire South Pacific to a resolution of one hundred yards. Recipient of virtually every international award as 'best computer simulation.'

Come face to face with excitement, at your MicroProse dealer.

F-15 Strike Eagle available for Commodore 64/128, Apple IIc/e/+ (64k), Atari XL/XE/520ST, IBM PC/PCjr and compatibles, and Tandy 1000 Series. Gunship available for Commodore 64/128, Apple IIc/e/+ (64k), IBM PC/PCjr and compatibles, and Tandy 1000 Series; coming soon for Atari XL/XE/520ST and Amiga. Silent Service available for Commodore 64/128, Amiga, Apple IIc/e/+ (64k) and IIGs, Atari XL/XE/520ST, IBM PC/PCjr and compatibles, and Tandy 1000 Series. All products have suggested retail prices of either \$34.95 or \$39.95.

Available from your local retailer. If out of stock, contact MicroProse directly for further information on our full range of simulation software, pricing, availability, and to place Mastercard/Visa orders.

Uncompromising performance at an incredible price

## The Tandy® Color Computer 3

More colors, superb graphics,  
greater power for only \$219<sup>95</sup>

### Our most powerful Color Computer

Finally, the ideal computer for your family: the most advanced version of our famous Color Computer ever. The Color Computer 3 (26-3334) is great for popular home and small business applications such as budgets, word processing, graphics, entertainment and more. You get the advantages of a high-priced computer—without the high price!

### A rainbow at your fingertips

With an optional CM-8 High-Resolution Color Monitor (26-3215), the Color Computer 3 lets you create razor-sharp charts, graphs,

or just-for-fun doodles and sketches with a palette of 64 brilliant colors. The special graphics mode lets you paint 160 × 192 or 320 × 192 resolution graphics using 16 colors, or 640 × 192 resolution with 4 colors.

The Color Computer 3 comes with 128K memory (expandable to 512K), giving you greater programming and data-processing power. And its built-in Extended BASIC programming language features 21 new commands that allow you to alternate screens, colors, and backgrounds at a higher resolution and in a greater variety of colors than any previous Color Computer

### Compatible and expandable

Best of all, the new Color Computer 3 is compatible with all of the great software and accessories designed for the Color Computer 2. Choose from a wide selection of personal-management, educational and game programs.

It's easy to expand with a printer, telephone modem, and more. Even add a disk drive to turn your Color Computer 3 into the heart of a sophisticated disk system. Open the door to a library of advanced disk software.

The Color Computer 3 is your affordable alternative. See it today at Radio Shack.
